The Loritz Circus Waste Management is as follows:

GREYWATER

1. Once all vehicles are onsite and are placed we have a designated person that places out the water hoses and waste IBC hoses for each caravan.
2. This person then finds the onsite disposing point to connect the waste hoses or places out the waste containers strategically to accommodate all caravans.
3. Then he lays out the continuous waste hose that goes from caravan to caravan and then to dump point.
4. The water is pumped through a submersible pumps.
5. The Sullage that is disposed of is only from sinks and showers, as we have toilet facilities onsite and no oil or other products are placed down the pipes.
6. The greywater containers are serviced each day or when full. As one is filled it has an overflow point into the next tank. Then the tanks that are full are emptied and there is another to replace in the flow of disposal of the Loritz Circus grey waste water

We will contract Cleanaway or similar to remove wastes off the premises.

Toilets – we hire 4-5 unisex toilets and 1 disabled (if Available) if there is nil available onsite, as it is only a 2 hour duration most councils find this sufficient, if required we will hire more. These are services 1-2 times a week.

Waste – a contractor supplies us with 1 x 4.5m³ Front Load Bins which is at services 1-2 times a week, if more services are require we advise the company 24hr before.

Also 4 Wheelie Bins these are placed around site and are emptied into Front Loads Bins, by our staff.

This includes all animal waste.

We make arrangements also that there is sufficient on-site facilities for all circus staff.
