Class of building:	N/A
Recommendations:	Approve

Executive Summary

Council is in receipt of a Development Application for Demolition Works and Land Remediation Works to Facilitate Proposed City Park at 134-144 Henry Street and 42-50 Station Street Penrith 2750.

The proposal seeks to demolish all existing buildings and pavement at the subject site, and subsequently undertake remediation works in order to prepare the site for its future use as a public park. A separate Development Application has been lodged with Council (DA20/0047) in relation to the site for the Construction and Embellishment of Penrith City Park including Amenities Building, Pergola Structures, Water Features, Seating, Lighting & Signage & Related Landscaping, Utility Servicing, Stormwater Management Infrastructure, Allen Place Car Park Modifications & Road Works.

Under the provisions of Penrith Local Environmental Plan 2010 (LEP), the subject site is zoned RE1 Public Recreation and B4 Mixed Use, and the proposal is defined as 'demolition and remediation works', which are permissible in the zone.

This application is to be determined by the Local Planning Panel as the subject site is owned by Penrith City Council.

As Penrith City Council is the land owner, the assessment of this application has been peer reviewed by an external planning consultant. The peer review, prepared by Landmark Planning, dated 13 April 2021 has considered Council's assessment report, the application and supporting documentation. The peer review concludes that the proposed works are permissible within the zone and that Council's assessment has suitably considered the key considerations of Section 4.15 of the Environmental Planning and Assessment Act 1979. Further, the peer review concludes that the provisions of State Environmental Planning Policy No.55- Remediation of Land have been suitability addressed, noting that remedial works are proposed via the accompanying Remedial Action Plan, which make the site suitable for the future planned recreational use of the site.

The application has been notified to nearby and adjoining properties and advertised in the local newspaper in accordance with Council's Community Engagement Strategy. Council received no submissions.

An assessment under Section 4.15 of the Environmental Planning and Assessment Act 1979 has been undertaken and the application is recommended for approval, subject to conditions.

Site & Surrounds

The Site

The development site ("the site") is located in Penrith's City Centre, being situated approximately 180m south of Penrith Railway station.

The site comprises of several adjoining allotments, including the following:

- Lot 1 in DP 164798 and Lot 1 in DP 252457, commonly known as 134 to 138 Henry Street
- Lot 10 and 11 in DP 553665, commonly known as 140 to 142 Henry Street
- Lot 2 in DP 556075, commonly known as 144 Henry Street
- Lot 3 in DP1200790, commonly known as 42 to 44 Station Street
- Lot 1 in DP 526304, commonly known as 48 to 50 Station Street
- Lot E in DP 163176, commonly known as 46 Station Street
- In addition, the site area includes portions of the Allen Place Car Park.

Penrith City Council is the landowner for all allotments as listed above.

On the site currently are several buildings, associated structures, pavement, and public car park. The site currently and has historically been used for a range of commercial purposes, including:

- Former dry cleaner at 134-138 Henry Street
- Commercial premises at 140 Henry Street
- Former funeral home at 42-44 Station Street
- Public car park, within the Allen Place Car Park

Surrounding Land Uses

The site is bound to the north by Henry Street and numerous commercial premises including a Gym, Queens of Hearts Community Foundation and Nepean College. Further north is an open carpark and commercial premises on Belmore Street, including Bob Jane T-Marts and Veterinary Hospital. To the east of the site is Woodriff Street North, followed by commercial premises and Edwards Place carpark. Further east a Pathology Centre and testing laboratory are present. The site is bound to the south by Allen Place, following which are multiple commercial properties including cafes, a medical centre and pharmacy. Beyond High Street commercial premises are present. The site is bound to the west by Station Street, then medium to high density commercial premises. Further to the west is Peach Tree Creek and eventually the Nepean River.

Proposal

The application seeks development consent for the following works:

- Demolition works across the extent of the subject site, including the removal of buildings, structures, and pavements;
- Following the completion of demolition works, remediation works will occur to excavate the extent of the site contamination and relocate contaminated materials within a controlled location for long term containment / encapsulation (containment cell located on the subject site).
- Proposed working hours are 7:00am to 6:00pm Monday to Friday, and 8:00am to 3:00pm Saturdays. No work is proposed on Sundays and Public Holidays.
- Retention and protection of an existing Corymbia sp (Corymbia) on the site, and retention of the feature fountain associated with the former Funeral Home.

The proposed demolition and remediation works are to facilitate the future Penrith City Park on the site. Noting that the construction and embellishment of the future City Park is subject to a separate, current development application (DA20/0047).

Plans that apply

- Local Environmental Plan 2010 (Amendment 4)
- Development Control Plan 2014
- State Environmental Planning Policy No 55—Remediation of Land

Planning Assessment

- ### Section 4.15 - Evaluation

  The development has been assessed in accordance with the matters for consideration under Section 4.15 of the Environmental Planning and Assessment Act 1979, and having regard to those matters, the following issues have been identified for further consideration:

Section 4.15(1)(a)(i) The provisions of any environmental planning instrument

State Environmental Planning Policy No 55—Remediation of Land

The proposal has been assessed against relevant criteria under State Environmental Planning Policy No 55- Remediation of Land (SEPP 55). The objective of SEPP 55 is to provide for a Statewide planning approach to the remediation of contaminated land.

The application seeks development consent for remediation works. Accordingly, the proposal and accompanying documentation has been assessed by Council's Environmental Management Officer. Based on this review, the proposed remediation works are considered acceptable subject to conditions, as summarised below:

The site has historically been used for a variety of commercial uses including dry-cleaning and retail fuel dispensing, followed more recently by light commercial land uses. As a result of these previous uses, remediation is required to make the land suitable for the future use of the site as a public park.

A number of contaminated land investigations have been undertaken on the site including extensive soil, groundwater, and vapour analysis. The investigations have identified the following areas of environmental concern:

- (AEC) as requiring remediation:
- AEC 1:Former Dry Cleaner Shop
- AEC 2: Former Service Station
- AEC 3 : Soils underlying transformers
- AEC 4: Unknown fill material underlying buildings and pavement

On the site currently are several commercial buildings and public car parking, all of which are proposed to be demolished. Remediation of the entire site is to be staged, guided by stage specific Remedial Work Plans (RWP's). This application relates specifically to the western portion of the site where remediation will render the site suitable for the proposed park area.

All of the works, including additional investigation works that are to be undertaken once buildings are demolished, will be supervised by a NSW EPA Accredited Site Auditor (Site Auditor) with all investigation, remediation and validation reports and management plans to be reviewed and endorsed by the Site Auditor. No work, other than remediation works, will occur on the site until a Site Audit Statement and Site Audit Report has been issued for the site (to be submitted and approved by Council).

The stage specific Remedial Work Plans (including the RWP for the western portion park area subject to this application) are guided by an 'Overarching Remedial Action Plan' that has been endorsed by the Site Auditor. The overarching remediation strategy is to make the site suitable for the planned Penrith City Park development through a mix of both offsite disposal of contaminated material and onsite containment of contaminated material. This remediation strategy has been chosen after extensive consideration of available technologies and options and is consistent with contaminated land guidelines in terms of criteria to be met as well as in terms of the best option having regard for public

Contaminated materials assessed as suitable for onsite retention will be excavated and consolidated prior to final placement within an onsite containment cell. The containment cell will be located at least 30m away from current and future on and offsite structures and will be located above the groundwater table. In addition, the containment cell will be capped ensuring that the capping layer is of adequate depth (1.0m), impermeable and appropriately covered with an identifying 'marker layer'. A Long-Term Environmental Management Plan will be developed for the site which will be endorsed by the Site Auditor. An 88B Restriction as to User will be applied to the site to ensure appropriate ongoing notification and management mechanisms are implemented. These matters are satisfactorily addressed in the documentation supporting the application and are reinforced through conditions of consent.

In conclusion, with consideration to the above the proposal is considered to meet the requirements under SEPP 55 in that suitable remediation works are proposed to make the site suitable for the future intended use of the site. Council's Environmental Management Officer has reviewed the application and all supporting documentation and raises no objections to the proposal subject to conditions.

Local Environmental Plan 2010 (Amendment 4)

Provision	Compliance
Clause 2.3 Permissibility	Complies - See discussion
Clause 2.3 Zone objectives	Complies - See discussion
Clause 2.7 Demolition requires development consent	Complies - See discussion
Clause 5.10 Heritage conservation	Complies - See discussion

Clause 2.3 Permissibility
Under the provisions of Penrith LEP 2010 the subject site is zoned RE1 Public Recreation, and B4 Mixed Use. The proposal is defined as demolition and remediation works, which are permissible uses in the RE1 Public Recreation and B4 Mixed Use zone.

It is noted that the proposal is to facilitate the future use of the site as a public park (subject to a separate development application), and a *'recreation area'* is a permissible land use on the site.

Clause 2.3 Zone objectives
The objectives of the RE1 Public Recreation zone are as follows:

- *To enable land to be used for public open space or recreational purposes.*
- *To provide a range of recreational settings and activities and compatible land uses.*
- *To protect and enhance the natural environment for recreational purposes.*
- *To ensure that development is secondary and complementary to the use of land as public open space, and enhances public use, and access to, the open space.*
- *To provide land for the development of services and facilities by public authorities for the benefit of the community.*

The proposal is considered to be consistent with the zone objectives as outlined above, in that the proposal will enable the future use of the site as a public recreational space for the benefit of the community.

The objectives of the B4 Mixed Use zone are as follows:

- *To provide a mixture of compatible land uses.*
- *To integrate suitable business, office, residential, retail and other development in accessible locations so as to maximise public transport patronage and encourage walking and cycling.*
- *To minimise conflict between land uses within the zone and land uses within adjoining zones.*
- *To create opportunities to improve public amenity.*
- *To provide a wide range of retail, business, office, residential, community and other suitable land uses.*

The proposal is considered to be consistent with the zone objectives as outlined above, in that the proposal is to prepare the site for the future use of a public park which is located close to public transport (approximately 180m from Penrith Railway), and will create opportunity to improve public amenity.

With consideration to the above, the proposal is considered consistent with the zone objectives.

Clause 2.7 Demolition requires development consent
Clause 2.7 requires that:

The demolition of a building or work may be carried out only with development consent.

In accordance with this Clause, the current application seeks development consent for the demolition of existing buildings, structures and pavement on the subject site.

Clause 5.10 Heritage conservation

There are three listed heritage items in the vicinity of the proposed works, comprising of the following buildings:

1. Penrith Council Chambers (former) (Penrith Local Environmental Plan [LEP] 2010 Item No. 189) located to the north of the subject site.
2. TAFE Building (Penrith LEP 2010 Item No. 689) located to the north-east of the site.
3. Prospect Electricity Building (former) (Penrith LEP 2010 Item No. 701) located to the north-east of the site.

Further, there is one unlisted potential heritage item on the subject site being the John Price & Son Funeral Home (former), which is proposed to be demolished as part of this application.

Accordingly, the proposal was supported by a City Park Penrith Non-Aboriginal Heritage Impact Statement (HIS), prepared by Artifact Heritage Services Pty Ltd, dated 27 January 2021, which assesses potential heritage impacts as a result of the proposal.

The submitted HIS concludes that the proposal will have varying impact on the surrounding listed heritage impacts, ranging from neutral to minor direct and indirect impacts. The proposal however will have major direct impact (demolition) of the unlisted item being the John Price & Son Funeral Home.

Given the neutral to minor impact of the development on the surrounding listed heritage items, and noting that the demolition works are proposed in order to enable a future public park as a recreational area, on balance the proposed demolition is considered acceptable, subject to compliance with the provided recommendations contained within the HIS. The key recommendations contained within the HIS include (but not limited to):

- requiring comprehensive photographic archival recording of the interiors and exteriors of the John Price & Son funeral home in accordance with relevant Heritage Division's guidelines should be conducted prior to demolition of the building. The photographic archival recording of each item would be carried out prior to works commencing, and in some cases, during the construction program. It should be prepared in accordance with the NSW Heritage Office's How to Prepare Archival Records of Heritage Items (1998), and Photographic Recording of Heritage Items Using Film or Digital Capture (2006) by a suitably qualified heritage consultant using archival quality material.

- The ornamental octagonal fountain from the John Price & Son funeral home must be retained in situ and protected during works, and form part of the park landscaping following the completion of works.

- The stained glass windows and Chromatex bricks from the John Price & Son funeral home should be salvaged during demolition works.

- During construction and demolition works, monitoring of vibration impacts to the locally significant former Council Chambers (Penrith LEP 2010 Item No. 189), TAFE Building (Penrith LEP 2010 Item No. 689) and former Prospect Electricity Building (Penrith LEP 2010 Item No. 701) would be undertaken by structural engineers or a vibration specialist.

The application and supporting documentation was reviewed by an independent Heritage Consultant, who in principle did not support the demolition of the unlisted item, however they provided recommended conditions, which have been included in this report.

Overall, on balance the proposal is considered acceptable subject to conditions, recognising that the demolition works are to prepare the site for the use of a future public park, which is considered to be in the public interest, and the future development (public park) will have neutral to minor impact on the three surrounding listed heritage items.

Section 4.15(1)(a)(iii) The provisions of any development control plan

Development Control Plan 2014

Provision	Compliance
C1 Site Planning and Design Principles	N/A
C2 Vegetation Management	Complies - see Appendix - Development Control Plan Compliance
C3 Water Management	Complies
C4 Land Management	Complies - see Appendix - Development Control Plan Compliance
C5 Waste Management	Complies - see Appendix - Development Control Plan Compliance

C8 Public Domain	Complies
C9 Advertising and Signage	N/A
C10 Transport, Access and Parking	Complies - see Appendix - Development Control Plan Compliance
C11 Subdivision	N/A
C12 Noise and Vibration	Complies
C13 Infrastructure and Services	Complies
E11 Penrith	Complies - see Appendix - Development Control Plan Compliance

Section 4.15(1)(b)The likely impacts of the development

Environmental Impacts (Odor, Dust, Water Quality, Noise)

The proposal has potential to cause negative impacts, including odour, dust, water quality and noise impacts. To mitigate potential adverse impacts, various management plans have been prepared, and further plans will be developed as required by conditions of consent. All management plans are to be endorsed by the Site Auditor and will ensure the implementation of appropriate management controls, including monitoring, to mitigate potential human health and environmental impacts.

Existing Tree Retention and Protection Measures

Currently on the southern edge of the site is a large, well established Corymbia sp (Corymbia). This tree is proposed to be retained, and incorporated into the landscape design of the future City Park. A condition of consent has been imposed requiring the retention of the Corymbia sp (Corymbia). Further, conditions have been imposed requiring tree protection measures to be undertaken before and during demolition and remediation works, to ensure the ongoing health and viability of this tree. These conditions have been recommended as per advice from Council's Tree Management Officer.

Engineering (Flooding)

The site is affected by 1% AEP local overland flow flooding based on the *Penrith CBD Detailed Overland Flow Flood Study, 2015,* and *Penrith CBD Floodplain Risk Management Study and Plan, 2020*. However, given that the application is for demolition and remediation works only, the proposal is considered consistent with Council's flooding controls, subject to ensuring that any overland flows are not concentrated, dammed or diverted onto adjoining properties or Council's road network as a result of the works. A condition of consent to this effect has been imposed.

The site is further affected by mainstream flooding from the Nepean River in a Probable Maximum Flood (PMF) event. However, given the nature of the proposed development, flood related planning controls do not apply in this instance. It is noted that Council's Development Engineer raised no objections to the proposal, subject to recommended conditions of consent.

Traffic

To ensure the proposal does not result in adverse traffic impacts as a result of works, noting the considerable scale of demolition works, a condition of consent has been imposed requiring that prior to the commencement of any demolition or remediation works, a Construction Traffic Management Plan (CTMP) to be submitted to and approved by Penrith City Council’s Asset Management Department. The CTMP is to be prepared by a suitably qualified consultant with appropriate training and certification from Transport for NSW, and include details of any required road closures, work zones, loading zones and the like. Noting that approval of the CTMP may require endorsement by Council's Local Traffic Committee.

Section 4.15(1)(c)The suitability of the site for the development

The site is considered suitable for the proposal. In this regard, the proposal is a permissible land use, will result in the remediation of land, and facilitate the future use of the site as a public park.

Section 4.15(1)(d) Any Submissions

Community Consultation

In accordance with Council's Community Engagement Strategy, the proposal was notified to nearby and adjoining properties.

Council notified fifty-nine residences in the area, and the exhibition of the proposal occurred between 22 February to 23 March 2021

The application was also advertised in a local newspaper on 18 February 2021.

Council received no submissions.

Referrals

The application was referred to the following stakeholders and their comments have formed part of the assessment:

Referral Body	Comments Received
Development Engineer	No objections - subject to conditions
Heritage	Not supported, however conditions provided
Environmental - Environmental management	No objections - subject to conditions
Traffic Engineer	No objection subject to conditions

Section 4.15(1)(e)The public interest

The proposal is not considered to generate any significant issues of public interest, noting the nature of the proposal and that no submissions were received in relation to the application.

Conclusion

In assessing this application against the relevant environmental planning policies, being State Environmental Planning Policy No.55- Remediation of Land, Penrith Local Environmental Plan 2010, and Development Control Plan 2014, the proposal satisfies the aims, objectives and provisions of these policies.

Overall, the proposal is considered to be in the public interest as the demolition and remediation works will facilitate the future use of the site as a public park within the Penrith City Centre. The proposal is unlikely to result in negative impacts, noting that conditions of consent have been recommended relating to minimising environmental impacts (including odour, noise, dust and heritage impacts), ensuring the retention and protection of an existing tree on the site, and requiring a construction traffic management plan.

In conclusion, the application is recommended for approval, subject to the following conditions.

Recommendation

That Development Application DA21/0045 for Demolition Works and Land Remediation Works to Facilitate Proposed City Park at 134 - 144 Henry Street and 42-50 Station Street Penrith 2750 be approved subject to the attached conditions (Development Assessment Report Part B).

General

1 A001 - Approved plans table

The development must be implemented substantially in accordance with the Statement of Environmental Effects prepared by JBS&G, Reference 58140/134529 (Rev A), dated 14 December 2020, the application form, and any supporting information received with the application, except as may be amended by the following conditions.

Demolition

2 B002 - Demolition and Disposal to Approved Landfill Site

All demolition works are to be conducted in accordance with the provisions of AS 2601-1991 “The Demolition of Structures” and the Hazardous Building Materials Survey (Ref: 58140/127,994 Rev 0) prepared by JBS&G Australia Pty Ltd and dated 18 March 2020.

Prior to demolition, all services shall be suitably disconnected and capped off or sealed to the satisfaction of the relevant service authority requirements.

All demolition and excavated material shall be disposed of at a lawful waste management facility.

3 B006 - Hours of work

Demolition and remediation works will be restricted to the following hours in accordance with the NSW Environment Protection Authority Noise Control Guidelines:

- Mondays to Fridays, 7am to 6pm
- Saturdays, 7am to 1pm (if inaudible on neighbouring residential premises), otherwise 8am to 1pm
- No work is permitted on Sundays and Public Holidays.

In the event that the demolition or remediation work does not involve the use of equipment that emits noise then the work is not restricted to the hours stated above.

The provisions of the Protection of the Environment Operations Act, 1997 in regulating offensive noise also apply to all works.

Heritage/Archaeological relics

4 C Special - Archival

Prior to the commencement of demolition works, the Funeral Home Building located at 42-44 Station Street is to be archivally recorded, including its building exterior and interior. The archival recording is to be prepared by a suitably qualified heritage consultant using archival quality material and prepared in accordance with 'NSW Heritage Office’s How to Prepare Archival Records of Heritage Items' (1998), and ' Photographic Recording of Heritage Items Using Film or Digital Capture' (2006).

Prior to the commencement of demolition works, a copy of the archival record as required by this condition is to be provided to Council's library.

5 C Special - Fountain must be retained

The fountain located at the corner of Station and Henry Street that is associated with the Funeral Home building must be preserved in situ.

6 C Special - Heritage

The development is to be carried out in accordance with the recommendations of the 'City Park Penrith Heritage Impact Statement' prepared by Artefact Heritage Services Pty Ltd, dated 27 January 2021, in so far as the recommendations relate to the subject development.

Environmental Matters

7 D001 - Implement Approved Sediment and Erosion Control Measures

Erosion and sediment control measures shall be installed **prior to the commencement of works on site.** The erosion and sediment control measures are to be maintained in accordance with the approved erosion and sediment control plan(s) for the development and the Department of Housing's “Managing Urban Stormwater: Soils and Construction” 2004.

The approved sediment and erosion control measures are to be maintained until development of the site has been completed including all building and landscaping work to occur post remediation of the site. These measures shall ensure that mud and soil from vehicular movements to and from the site does not occur.

8 D - Dust

Offensive odours are not to be emitted from the site. Vapours, fumes, gases, particles or any other substance that are considered to be harmful to human health or the environment or impact unreasonably on a person outside of the premises are not to be emitted from the site.

9 D Special - 88B Instrument

Upon submission to Penrith City Council of the NSW EPA Accredited Site Auditor prepared Site Audit Statement and Site Audit Report, including the Environmental Management Plan, the applicant shall submit to Council for approval, an 88B instrument which includes a restriction as to user over the subject site, with Council being the beneficiary. The restriction shall contain the following wording (or wording to the effect and as appropriate):

1. There is soil contamination on the land. Any risks from the presence of that contamination should be assessed prior to undertaking development on the land or changing the use of the land.
2. This land is the subject of an Environmental Management Plan prepared by ##### , dated ##### that contains specific requirements in relation to managing activities on this land.
3. The Environmental Management Plan refers to areas of residual soil contamination and on-site management of contaminated material (specify, asbestos and other contaminants) that must not be excavated without obtaining an environmental assessment report. Excavation works may also require the consent of Council.

Following approval by Council and within six (6) months of submission of the Site Audit Statement and Site Audit Report, the restriction must be registered with the Land & Property Management Authority in accordance with Section 88B of the *Conveyancing Act 1919*.

10 D Special - Environmental Management Plan

The Council approved and NSW EPA Accredited Site Auditor endorsed Environmental Management Plan (EMP) for the ongoing management of the site is be implemented and complied with. Should the document be amended at any time, a copy of the revised EMP shall be submitted to Council.

11 D Special - No Encroachment/ Impact on the Containment Cell

No services, infrastructure or building components other than the structural components required for the construction of the containment cell, are to traverse or impact the containment cell.

12 D special - Noise Impacts

Works shall be carried out in accordance with the *NSW Department of Environment and Climate Change’s “Interim Construction Noise Guideline” 2009* and the *Construction Noise & Vibration Management Plan City Park Penrith prepared by Acoustic Dynamics and dated 11 December 2020.*

13 D Special - Remediation Documentation

Site remediation works shall be carried out generally in accordance with the following Council approved and NSW EPA Accredited Site Auditor endorsed documents:

- Penrith Central Park Village Overarching Remedial Action Plan (Overarching RAP) (Ref:55073/120362 Rev 0) prepared by JBS&G Australia Pty Ltd and dated 5 March 2019
- Draft Remedial Work Plan (RWP) Penrith Central Park Village Ref:58410/132003 Rev B prepared by JBS&G Australia Pty Ltd and dated 8 December 2020 (as well as final version RWP and additional RWPs developed as works progress and as endorsed by Site Auditor)
- Hazardous Building Materials Survey (Ref: 58140/127,994 Rev 0) prepared by JBS&G Australia Pty Ltd and dated 18 March 2020
- Penrith Central Village Park Remediation Works Construction Environmental Management Plan (Ref: 58140/123808 Rev A) prepared by JBS&G Australia Pty Ltd and dated 14 December 2020
- Health and Safety Plan
- Site Auditor Interim Advice
- Environmental Management Plan

as well as Penrith Development Control Plan 2014, applicable NSW Environment Protection Authority made and endorsed Guidelines (including the Contaminated Land Management Guidelines for the NSW Site Auditor Scheme (3rd edition) 2017), the National Environment Protection (Assessment of Site Contamination) Measure 1999 [NEPM2013] and ANZECC and NHMRC Guidelines.

The above documents may be revised, updated and additional plans developed as required throughout the remediation works. As the plans and documents are updated and new plans or documents developed, a copy of the Site Auditor endorsed plans/documents (including Site Auditor Interim Advice) are to be provided to Penrith City Council.

14 D special - Remediation Works Approvals

No remediation works are to commence until:

(a) the remaining pre-remediation investigations have been completed and endorsed by the NSW Accredited Site Auditor and the Draft Remedial Work Plan (RWP) has been finalised and endorsed by the Site Auditor; and

(b) the Site Auditor endorsed RWP has been submitted to and approved by Penrith City Council.

15 D special - Supervision of Remediation Works

All remediation works, including all associated investigation and validation works, are to be supervised by an appropriately qualified person. An appropriately qualified person is defined as a person who, in the opinion of Council, has a demonstrated experience, or access to experience in hydrology, environmental chemistry, soilscience, eco-toxicology, sampling and analytical procedures, risk evaluation and remediation technologies. In addition, the person will be required to have appropriate professional indemnity and public risk insurance.

The appropriately qualified person/s shall:

(a) Supervise the remediation works
(b) Supply Council with a copy of any relevant documentation for further testing carried out during the remediation works
(c) After completion of works, provide Council with a Site Auditor endorsed Validation Report, Environmental Management Plan and other documents as required. The Validation Report is to include Survey Plan(s)/Works-as-Executed Plan showing the location and extent of the containment of contaminated material (containment cell).

A NSW EPA Accredited Site Auditor (as accredited under the Contaminated Land Management Act 1997) shall supervise the remediation works, including all associated investigation and validation works.

A Site Audit Statement and Site Audit Report must be submitted to Penrith City Council on completion of the remediation and validation works and prior to any other works commencing on the site. The site must be suitable for its intended land use and shall not pose any unacceptable risk to human health or the environment.

The contact details of the appropriately qualified person/s, and the NSW EPA Accredited Site Auditor, engaged for the works, shall be provided with the Notice of Commencement.

Construction

16 H001 - Stamped plans and erection of site notice

Stamped plans, specifications, a copy of the development consent, the Construction Certificate and any other Certificates to be relied upon shall be available on site at all times during construction.

The following details are to be displayed in a maximum of 2 signs to be erected on the site:

- the name of the Principal Certifying Authority, their address and telephone number,
- the name of the person in charge of the work site and telephone number at which that person may be contacted during work hours,
- that unauthorised entry to the work site is prohibited,
- the designated waste storage area must be covered when the site is unattended, and
- all sediment and erosion control measures shall be fully maintained until completion of the construction phase.

Signage but no more than 2 signs stating the above details is to be erected:

- at the commencement of, and for the full length of the, construction works onsite, and
- in a prominent position on the work site and in a manner that can be easily read by pedestrian traffic.

All construction signage is to be removed when the Occupation Certificate has been issued for the development.

17 H002 - All forms of construction

Prior to the commencement of works:

(a) Toilet facilities at or in the vicinity of the work site shall be provided at the rate of one toilet for every 20 persons or part of 20 persons employed at the site. Each toilet provided must be:

- a standard flushing toilet connected to a public sewer, or
- if that is not practicable, an accredited sewage management facility approved by the council, or
- alternatively, any other sewage management facility approved by council.

(b) All excavations and backfilling associated with the erection or demolition of a building must be executed safely and in accordance with the appropriate professional standards. All excavations associated with the erection or demolition of a building must be properly guarded and protected to prevent them from being dangerous to life or property.

(c) If an excavation associated with the erection or demolition of a building extends below the level of the base of the footings of a building on an adjoining allotment of land, the person causing the excavation to be made:

- must preserve and protect the building from damage, and
- if necessary, must underpin and support the building in an approved manner, and
- must, at least 7 days before excavating below the level of the base of the footings of a building on an adjoining allotment of land, give notice of intention to do so to the owner of the adjoining allotment of land and furnish particulars of the excavation to the owner of the building being erected or demolished. The owner of the adjoining allotment of land is not liable for any part of the cost of work carried out for the purposes of this condition, whether carried out on the allotment of land being excavated or on the adjoining allotment of land, (includes a public road and any other public place).

(d) If the work involved in the erection or demolition of a building is likely to cause pedestrian or vehicular traffic in a public place to be obstructed or rendered inconvenient, or involves the enclosure of a public place, a hoarding or fence must be erected between the work site and the public place:

- if necessary, an awning is to be erected, sufficient to prevent any substance from, or in connection with, the work falling into the public place,
- the work site must be kept lit between sunset and sunrise if it is likely to be hazardous to persons in the public place, and
- any such hoarding, fence or awning is to be removed when the work has been completed.

Engineering

18 K201 - Infrastructure Bond

An Infrastructure Restoration Bond is to be lodged with Penrith City Council for development involving works around Penrith City Council's Public Infrastructure Assets. The bond is to be lodged with Penrith City Council prior to commencement of any demolition or remediation works. The bond and applicable fees are in accordance with Council’s adopted Fees and Charges.

An application form together with an information sheet and conditions are available on Council’s website.

Contact Penrith City Council's Asset Management Department on 4732 7777 or visit Penrith City Council’s website for more information.

19 K202 - S138 Roads Act - Minor Works in the Public Road

Prior to the commencement of any demolition or remediation works, a Section 138 Roads Act application, including payment of application and inspection fees together with any applicable bonds, shall be lodged with and approved by Penrith City Council (being the Roads Authority for any works required in a public road). These works may include but are not limited to the following:

a) Demolition or remediation works within the road reserve
b) Road occupancy or road closures (including temporary construction work zones and tower crane operation)
c) The placement of hoardings, structures, containers, waste skips, signs etc. in the road reserve
d) Temporary construction access

All works shall be carried out in accordance with the Roads Act approval, the development consent, including the stamped approved plans, and Penrith City Council's specifications, guidelines and best engineering practice.

Contact Penrith City Council's Asset Management Department on 4732 7777 or visit Penrith City Council's website for more information.

20 K224 - Construction Traffic Management Plan

Prior to the commencement of any demolition or remediation works, a Construction Traffic Management Plan (CTMP) shall be submitted to Penrith City Council's Asset Management Department for endorsement. The CTMP shall be prepared by a suitably qualified consultant with appropriate training and certification from Transport for NSW. The CTMP shall include details of any required road closures, work zones, loading zones and the like. Approval of the CTMP may require approval of the Local Traffic Committee. Please contact Council's Asset Management Department on 4732 7777 and refer to Council's website for a copy of the Temporary Road Reserve Occupancy Application Form.

21 K Special Condition - Overland Flows

The demolition and remediation works shall not concentrate, dam or divert overland flows onto adjoining properties or Council's road network.

Landscaping

22 L010 - Retain existing tree

The existing Corymbia sp (Corymbia) on the site is to be retained.

23 L Special - Engagement of Arborist

An Arborist with a minimum AQF (Australian Qualification Framework) Level 5 shall be engaged for the duration of the approved works to ensure that tree protection measures on the site are implemented and complied with.

The project Arborist is to ensure that demolition can be undertaken in such a way that machinery will not be required to enter into the designated Tree Protection Zone (TPZ) and so that building debris does not fall into the TPZ of the Corymbia sp (Corymbia) located on the southern boundary. In the event that remediation works are required to be undertaken within a distance of 15m from the existing Corymbia sp (Corymbia), the project Arborist must be consulted in regards to those works.

24 L Special - Tree Protection Measures

Prior to the commencement of works, a Tree Protection Plan (Specification) and Drawing written in accordance with AS 4970 - 2009, 'Protection of Trees on development sites' is to be prepared, to appropriately retain and protect the Corymbia sp (Corymbia) located on the southern boundary. of the site, and be submitted to and approved by Penrith City Council.

At a minimum the following protection measures of the plan shall include but not be limited to:

- providing a Tree Protection Area of at a distance of 15 metres to the north; and as bounded by the current curb edge to the east and west; and as bounded by the curb to the south;

- ensuring that the existing road surface and small garden bed are retained within this perimeter. This surface is not to be removed as part of this approval;
- ensuring the fencing to be installed is constructed of wooden panels, palings or the like to prevent soil and debris encroaching into the TPZ as detailed in *AS 4970 - 2009, Protection of Trees on development sites, Section 4.3*;
- providing for weather resistant signage in a prominent locations on the tree protection fence that indicates access into the Tree Protection Zone is not permitted. The sign shall be a minimum dimension of 500mm high x 400mm wide of similar design and layout as per *Appendix C, AS4970 - 2009 Protection of trees on development sites*
- ensuring the fence is installed prior to the commencement of demolition;
- requiring the project Arborist to supervise any work within or directly adjacent to the Tree Protection Zone;
- requiring the project arborist to undertake regular inspections to ensure the fence is intact, complies with the above standard, is installed to the appropriate dimensions and provides effective protection for the tree to be retained.
- ensuring the Tree Protection Zone (TPZ) is maintained as per *AS4970 - 2009, Section 4.6.* Access to the TPZ is permitted to undertake necessary maintenance such as mowing, watering & weed control;
- ensuring building materials, chemical storage, site sheds, wash out areas, and similar shall not be located within the fenced Tree Protection Zone or that the Tree protection Zone is not downstream of any washdown areas.
- Providing a contingency should tree roots be exposed during approved works to permit roots with a diameter less than 25mm to be pruned cleanly using sharp hand tools and not torn or ripped by machinery and require tree roots greater than 25mm in diameter are to be assessed by a qualified arborist - minimum Australian Qualification Framework (AQF) Level 5 or equivalent – before any pruning work is undertaken.

The Tree protection Plan (Specification) and Drawing is to:

- require that the Corymbia sp (Corymbia) located on the southern boundary and the location of the tree protection fence be marked on all demolition and construction drawings.
- provide a requirement that all contractors and workers on site shall be briefed on the tree protection and management procedures in place as part of their site induction. A written record of the induction process is to be kept on site.
- identify key stages where monitoring and certification will be required as outlined in AS 4970–2009, Section 5;
- require the project Arborist to supervise any work within or directly adjacent to the Tree Protection Zone;
- nominate whether trunk and branch protection will be required to be installed on the tree and at what stages this may be required;
- permit the project Arborist to alter/adjust the Tree Protection Zone or measures providing that reasons for this are clearly documented, justifiable, undertaken under the supervision of the project Arborist and that those changes will not cause detriment or damage to the tree;
- require the project Arborist to undertake site inspections not less than weekly to ensure that Tree Protection measures are in place.
- require the project Arborist to a written record (e.g. field notes and photos) to provide evidence of site attendance and compliance with the approved conditions of consent
- require the project Arborist to forward a copy of the written record of inspection to the Principal Certifying Authority within 1 week of that inspection occurring.
- require the project Arborist to identify that whether there is a breach of the Tree Protection Plan. If a breach is identified the project arborist must report this to the Principal Certifying Authority and specify any remedial works and the timeframe in which these works must be completed. If an inspection reveals that there has been a significant breach of the Tree Protection Plan (specifications), inspections from then on must be carried out twice weekly.

The approved Tree Protection Plan and its protection measures shall be in place prior to demolition commencing and a copy of the plan shall be retained on site at all times.

Appendix - Development Control Plan Compliance

Development Control Plan 2014

Part C - City-wide Controls

The proposal satisfies the objectives and controls under Penrith DCP 2014, as outlined below:

C1 Site Planning and Design Principles

The site is not mapped on Council's scenic and landscape values map, and therefore the controls under s 1.1.2 do not apply in this instance. The application does not propose any buildings works, and so built fo are not applicable.

C2 Vegetation Management

The site is not mapped on Council's Biodiversity Significant Map. However, the site contains an existing r Corymbia sp (Corymbia) located to the south edge of the site, which is to be retained. Accordingly, the a was reviewed by Council's Tree Management Officer, who provided the following advice relating to the rete ongoing protection of this tree:

- An Arborist with a minimum AQF (Australian Qualification Framework) Level 5 will need to be engage duration of the approved works to ensure that tree protection measures on the site are implemented complied with.
- ensure that demolition can be undertaken in such a way that machinery will not be required to enter designated Tree Protection Zone (TPZ) and so that building debris does not fall into the TPZ of the *C (Corymbia)* located on the southern boundary.
- a Tree protection Plan (Specification) and Drawing written in accordance with *AS 4970 - 2009, Prote Trees on development sites* shall be documented for and implemented on the site to appropriately re protect the *Corymbia sp (Corymbia)* located on the southern boundary.

With consideration to the above, the proposal satisfies the objectives of Chapter C2.

C10 Transport, Access and Parking

To ensure the proposal does not result in adverse traffic impacts as a result of works, noting the consider of demolition works, a condition of consent has been imposed requiring that
prior to the commencement of any demolition or remediation works, a Construction Traffic Management P to be submitted to and approved by Penrith City Council’s Asset Management Department.

E11 Penrith

In review of Figure E11.2 Penrith City Centre Character Areas, the subject site is located within the area as 'City Park and City Square'. The current proposal seeks site preparation works to deliver the site as a park. As such, the proposal is considered consistent with the objectives of Chapter E.11.

1. Introduction

1.1 Introduction and Background

The Statement of Environmental Effects (SOEE) has been prepared to accompany a Development Application for the proposed demolition and remediation works to be undertaken with the western portion of the proposed Penrith Central Village Park (City Park). The site location and boundary are presented in **Figure 1**. The site is legally identified as Lot 1 in DP 164798 and Lot 1 in DP 252457 (134 to 138 Henry Street), Lot 10 and 11 in DP 553665 (140 to 142 Henry Street), Lot 2 in DP 556075 (144 Henry Street), Lot 3 in DP1200790 (42 to 44 Station Street), Lot 1 in DP 526304 (48 to 50 Station Street) and Lot E in DP 163176 (46 Station Street). Notwithstanding the descriptions, portions of the site are also referred to as being present with the former Allen Place Car Park. The extent of the site is shown on **Figure 2**.

The SOEE describes the site, its environment, the proposed development and provides an assessment of potential environment impacts associated with the proposal. The SOEE has been prepared by JBS&G Australia Pty Ltd (JBS&G), as per the instruction of Penrith City Council (PCC).

1.2 Objective of the Proposal

The demolition and remediation works are being undertaken by PCC to identify the extent of historical contamination within the site and encapsulate the contamination to mitigate any potential health or ecological risk. The encapsulation / long term containment of contaminated soils as will be achieved with the remedial works will facilitate site suitability for a future development as the proposed City Park.

1.3 Brief Description of the Proposal

The works described by this SOEE will be undertaken in two parts, namely the demolition component of the works and the remediation component of the works. The demolition component of the works will include the removal of existing buildings and pavements across the extent of the site. This will facilitate making the complete extent of the site accessible for environmental investigations which is required to define the extent of proposed remedial works.

The remediation component of the works will include the excavation of potential asbestos and known chlorinated contaminated soils present across the extent of the site and consequent of the historical importation of fill materials to the site during initial development and uncontrolled releases form a historical dry cleaning activity undertaken on the site. The contaminated soils will be consolidated and encapsulated within a central portion of the site for long term management. The consolidation / encapsulation and anticipated long term management will be sufficient to mitigate the potential health and ecological risk of these materials to allow the site to be developed as the proposed City Park.

1.4 Purpose of the Statement of Environmental Effects

The purpose of this SOEE is:

- To document the existing environment of the area of the proposed City Park;
- To assess the potential environmental impacts of the demolition and remediation works to be undertaken on the site; and
- To provide the consent authority, the public, any relevant government authorities and the applicant with sufficient information to make informed decisions in relation to the proposal.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

2. Background

2.1 Site Identification

The site location is shown on **Figure 1**. The extent of the site and associated cadastral boundaries are shown on **Figure 2**. The site details are summarised in **Table 2.1** and described in detail in the following sections.

Table 2.1: Summary Site Details

Property Identification and Street Addresses	The site is comprised of the following legal properties: • Lot 1 in DP 164798 and Lot 1 in DP 252457 – 134 to 138 Henry Street • Lot 10 and 11 in DP 553665 – 140 to 142 Henry Street • Lot 2 in DP 556075 – 144 Henry Street • Lot 3 in DP1200790 – 42 to 44 Station Street • Lot 1 in DP 526304 – 48 to 50 Station Street • Lot E in DP 163176 – 46 Station Street In addition, the site area includes portions of the Allen Place Car Park.
Local Government Authority	Penrith City Council
Approximate MGA Coordinates (MGA 56)	Easting: 286582.2 Northing: 6262912.7
Site Zoning	Commercial Core (B3) and Public Recreation (RE1) under Penrith Local Environmental Plan (LEP) 2010
Current Use	Commercial (car parking, retail and services)
Previous Use	Commercial/industrial (car parking, dry cleaning and general retail/services) and residential
Proposed Use	Public open space
Site Area	Approximately 0.71 ha

2.2 Site Description

The key features from the areas that form the focus of the proposed demolition and remediation works within the extent of the City Park area are discussed in the following sections and shown on **Figure 3**. The discussions are focussed to the most significant areas of the site with respect to the occurrence of site contamination that has necessitated the works as described in the SOEE.

2.2.1 The Dry Cleaner, 134-138 Henry Street, Penrith

The former dry cleaner comprised the northern third of the building (referred to as Shop 3, Gaymark Lane) located at 134-138 Henry Street, Penrith. The shop-front occupied most of the building footprint (>85 %), with the remainder comprising a secluded water closet, storage space and point of sale. The premise was vacant during the period of the investigation.

The water closet comprised a small (<3 m^2), fully enclosed space which was serviced by two separate sewerage disposal points. Detergents, household solvents and soaps were observed to be stored within the water closet. The shop-front was serviced by an air exchange (air-conditioning) unit which was observed to be operational during each visit to the premises.

In the alleyway between the dry cleaner and Shop 3 (140 Henry Street, described below), numerous services were present. Sewerage infrastructure and stormwater pipes ran in a north to south orientation, connecting stormwater and sewerage pipes to the greater system, south of the premises. Services were noted to comprise a mixture of terracotta and polyvinyl chloride (PVC) pipes.

The southern portion of 134-138 Henry Street was inaccessible during the period of the investigation, in which it is noted a café was operating.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

2.2.2 Shop 3, 140 Henry Street, Penrith

None of the building spaces located on 140 Henry Street were accessible during the period of the investigation due to business/tenants still operating. Therefore, the observations described below are based on an inspection by a suitably qualified and experienced JBS&G environmental consultant conducted on 3 May 2018 and detailed in the RAP (JBS&G 2019a).

Shop 3 comprised the southern half of the building located at 140 Henry Street, Penrith. The shop was partitioned into four rooms and a water closet, joined by a central hallway. The premises housed an alternative health centre at the time of the inspection.

The shop-front rooms were serviced by air exchange units (air conditioners) which were observed to be in operation during each site visit. The water closet comprised a small (<5 m^2), fully enclosed space which was serviced by two separate sewerage disposal points.

An inspection of the property revealed the presence of household cleaning and medical products: limescale solvents, surface cleaners, stain removers, methylated spirits, polishes, pest control products, ethanol-based surface wipes and carpet deodorisers.

2.3 Surrounding Land Use

The current land uses of adjacent properties or properties across adjacent roads are summarised below.

- North – The site is bound to the north by Henry Street and then numerous commercial premises including UFC Gym, Queens of Hearts Community Foundation and Nepean College. Further north is an open carpark and commercial premises on Belmore Street, including Bob Jane T-Marts and Veterinary Hospital;
- East – To the east of the site is Woodriff Street North, followed by commercial premises and Edwards Place carpark. Further east a Pathology Centre and testing laboratory are present;
- South – The is was bound to the south by Allen Place, following which are multiple commercial properties including cafes, a medical centre and pharmacy. Beyond High Street commercial premises are present; and
- West – The site is bound to the west by Station Street, then medium to high density commercial premises. Further to the west is Peach Tree Creek and eventually the Nepean River.

2.4 Site History

Previous contamination assessments undertaken at the site presented a site history review based on the following information sources:

- Section 149(2&5) certificates obtained from council from three representative lots;
- Current and historical land title records;
- Records of stored Dangerous Goods held by WorkCover;
- Historical aerial photographs obtained from the Department of Lands;
- Publicly available heritage records held by the Department of Planning and Environment and Council, where readily available;
- Council Development Application / Building Application (DA/BA) records; and
- Records of environmental incidents, former environmental licences, or contaminated land notices or notifications, available from the EPA.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

The site was reported to have been used for a range of residential and commercial purposes throughout the period over which records were available. Section 149 (2&5) certificates, historical land title records and aerial photographs indicate that the site comprised primarily low density residential premises from 1881 to 1949, following which it was progressively redeveloped into a commercial precinct.

The commercial precinct included mostly low-risk activities such as restaurants, retail and other services. Two premises were identified to have previously been used for activities with elevated potential to cause contamination of the land:

- Shop 3/134-138 Henry Street, Penrith – dry cleaning services (1977 – 2016); and
- 118-120 Henry Street, Penrith – garage proprietary services (1967 – 1973).

The previous assessments have identified contamination within the vicinity of the former dry cleaner (Shop 3/134-138 Henry Street). Following identification of contamination underlying and within the vicinity of the premises, Council notified the NSW EPA of contamination present at Shop 3/134-138 Henry Street.

Subsequently the EPA provided a response to Council (EPA 2018) which made the determination that regulation of the chlorinated hydrocarbon impacts present at Shop 3/134-138 Henry Street under the Contaminated Land Management Act 1997 was not currently required.

No items of aboriginal or European heritage were identified at the site.

2.5 Penrith City Council and City Park

Penrith City Council has reported a proposal to transform the Penrith City Centre by unlocking the precinct to major opportunities with the delivery of a new City Park.

The City Park is described as being a significant open space in a prime location on the corner of Henry Street and Station Streets, Penrith. City Park will be a vibrant, thriving, green space with something for everyone and plenty of opportunities to meet, retreat, eat, be active and celebrate together. These aspects are expected to strengthen its appeal as a destination for residents, workers, and visitors and stimulate the day and night time economy.

Key features of the City Park design include a variety of large trees to provide shade, a sensory garden, several water features, as well as natural landscaping to transform the space into an urban retreat. The concept design also provides space for people to meet, eat, be active and celebrate together with these aspects set to stimulate the day and night time economy by attracting residents, visitors and investors.

The proposed conceptual development plans are shown as **Figure 4**.

2.6 The Proposed Development

The proposed development can be described in two stages:

- Demolition works across the extent of the proposed City Park comprising removal of buildings and pavements; and
- Subsequent to the completion of demolition works, undertaking site remediation works to excavate the extent of site contamination and relocated within a controlled location for long term containment / encapsulation.

The work activities to be undertaken in each of these stages is described in more detail following. At the completion of the works, the site will be rendered to a condition that is suitable, from a contamination perspective, for redevelopment by PCC for the proposed future use as City Park.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

2.7 Demolition

The demolition stage of the works will be initial stage of the works. The demolition works will include the removal of all above ground infrastructure across the extent of the site. As can be observed from **Figure 2** a range of existing retail and commercial buildings are currently present across the site. The remaining area of the site can be observed to be paved as associated with the current use for car parking and as Allen Place.

In undertaking demolition works PCC shall only use Workcover accredited and Council endorsed contractors. All demolition works shall be undertaken as per relevant statutes and Australian and International Standards.

The majority of the demolished materials will be transported of-site for recycling. This will include reclamation of all masonry / concrete based materials, metallic wastes from buildings across the extent of the site. Further asphaltic / concrete based materials from site pavements will be removed and segregated to allow off-site recycling All other wastes shall be transported to a facility legally able to accept them.

2.8 Remediation

The Remedial Workplan which describes the methodologies and procedures to achieve the remediation of the site is provided as **Appendix A**. The Conceptual Remedial Action Plan which has premised the selection of the remedial methods in the Remedial Work Plan is provided as **Appendix B**. A Site Auditor accredited under the *Contaminated Lands Management Act 1997* has been appointed to review the proposed remedial strategy. A Site Audit Report and interim advice provided by the Site Auditor is included as **Appendix J**.

The remedial works are required to address contaminated soils as identified as:

- Fill material underlying buildings which is reported to be impacted with asbestos. These fill materials are generally characterised as being present to a near surface depth, having been historically imported to stabilise the site surface. The extent of asbestos impacts is not known at this stage and will be able to be determined by observation of all site soils following demolition works;
- Chlorinated ethene impacted soils as identified underlying 134-138 and 140 Henry Street. These soils have been caused to be impacted by historical uncontrolled releases of dry cleaning fluids (i.e. tetrachloroethene, PCE) from a former dry cleaners as located in this area. Demolition of the overlying buildings will facilitate the assessment of the extent of chlorinated ethene impact. It is considered likely that historical trenches / easements as placed for services will have acted as preferential pathways of chlorinated ethene migration and will control the extent of chlorinated ethene impact; and
- Soils underlying the electrical Transformers in the south-eastern portion of the site have not been previously assessed. There is a potential for contamination here as consisting of asbestos or otherwise dielectric fluids as historically used for the transformers.

The remedial method, following delineation of the extent of impacted soils, is to encapsulate the soils on-site for long term management. The remedial approach is described as containment by the implementation of physical separation or within a “Capping Layer”. The remedial / management method is intended to eliminate the direct contact exposure pathway for impacted soils. The preclusion of buildings from overlying or in proximity of the contained soils precludes potential vapour intrusion of chlorinated ethenes and exposure to potentially elevated levels chlorinated ethene vapours.

The physical separation shall be implemented by the following measures:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Impermeable Layer – in areas not covered in hardstand, the materials subject to containment will be required to be covered with a geosynthetic clay liner (GCL) layer with a hydraulic conductivity of less than 5 x 10^{-11} m/s. This is likely to consist of a geotextile as impregnated with / containing bentonite

  In areas of proposed hardstand on the redeveloped site / City park, the GCL layer is not required;

- Marker Layer - comprising a bright orange geotextile, such as "Bidim" or similar geotextile, is to be installed prior to placement of the capping layer. The marker layer is required to be easily recognisable in soils (i.e., bright orange in colour), be durable as a long term marker layer (i.e., >150 grams per square metre) and maintain integrity during remedial/civil works;

- Capping Layer - A minimum 1.0 m (after compaction) capping layer of soil capping material / thickness is required to manage access to asbestos impacted soils across the areas subject to containment. Material imported to site for use as a capping layer will be required to be environmentally suitable material for human and/or ecological exposure (as appropriate). Imported material shall comprise imported virgin excavated natural material (VENM) or material certified in accordance with an exemption issued by the NSW EPA (i.e. ENM, recycled fines etc) and the RAP (JBS&G 2019). The materials may otherwise consist of VENM as generated by excavation of the area used for encapsulation / containment; and

- Should services extend through asbestos impacted soils, then they will be required to be placed in dedicated alignments, demarcated (with a marker layer at the base and walls of the trench) and backfilled with clean material to avoid exposure to underlying impacted material during subsequent maintenance or excavation work.

The lateral extent of the soils containment has been shown on **Figure 5**. The ongoing maintenance of the contained soils shall be controlled by a proposed long term Environmental Management Plan (LTEMP) to be implemented on the site. The current draft of LTEMP is provided as **Appendix I**.

The remedial works will result in a building platform being available that will be suitable from an ecological and human health perspective for the proposed redevelopment as City Park.

2.9 Hours of Operation

Proposed working hours on this project are:

- 7:00 am to 6:00 pm Monday to Friday; and
- 8:00 am to 3:00 pm Saturdays.

No work will be conducted on Sundays and Public Holidays.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3. Existing Environment

3.1 Site Condition

The overall site is characterised as an irregularly shaped, large commercial precinct bound by the Allen Place loop, Henry Street, Station Street and 98-100 Henry Street. The site area includes the Allen Place car park and ten commercial premises on the southern side of Henry Street in Penrith. The borders of the site were not secured and open to the public (pedestrians and vehicles). The site was utilised for a range of commercial operations at the time of the site investigation including a car park, retail shops and cafes. High pedestrian and vehicular traffic was observed during working hours. All commercial premises at the site were noted to be occupied.

The site generally sloped downward from east to west, with a slight ridge line observed to dissect the centre of the car park. Inspection of site surfaces and comparisons with the surrounding landscape indicated that significant topographical alterations had not occurred.

The majority of ground surfaces were sealed as asphaltic pavement, concrete pathways, and building footprints with onsite drainage channels directing surface water toward the municipal stormwater system. The balance of the site comprised unsealed grounds in the form of garden beds.

Buildings at the site did not exhibit significant indicators of dilapidation, although minor wear, consistent with the age of the buildings was observed. A detailed inspection/hazardous building materials survey of the existing site structures has been completed and is included as **Appendix C**.

No surface water was present at the site at the time of the investigation. No evidence of waste storage, except for commercial municipal waste bins, or storage tanks were observed at the site. No olfactory indicators of volatile chemical usage were encountered during the most recent site inspections. No visual indicators of gross or widespread contamination were observed.

Four transformers were observed: one in the southwest and east corners of the site and two along the northern boundary of the Allen Place Car Park, which were on raised concrete platforms. No hydrocarbon staining was observed to be associated with the transformers. The location of the transformers is shown on **Figure 3**.

3.2 Topography

Review of topographic information obtained from previous assessments as completed has reported that the regional topographic map indicated that the site surfaces have an elevation of approximately 30 m Australian Height Datum (AHD). The site generally slopes downwards to the west, towards the Nepean River.

Site inspection confirmed that the topography on site was not significantly altered from the natural alignment and sloped slightly downward toward the western boundary, Station Street. A local ridge line existed which dissected the Allen Place Car Park in an approximately west to east alignment, with site surfaces sloping downwards perpendicular to the ridge line.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3.3 Geology

Reference to the 1:100 000 Geological Series Sheet for Penrith, DMR (1991) indicates that the site is underlain by Bringelly Shale of the Wianamatta Group originating from the Middle Triassic epoch. This unit is comprised of shale, carbonaceous claystone, claystone, laminite, fine to medium-grained lithic sandstone, rare coal and tuff. Bringelly Shale is underlain by Ashfield Shale and, at depth, Hawkesbury Sandstone.

Reference to the 1:100 000 Soil Landscape Series Sheet for Penrith, DMR (1990) indicates that the site is within the Richmond Soil Landscape group. This group of landscape is characterised by quaternary terraces of the Nepean and Georges Rivers. Relatively flat (slopes <1 %) and level. Splays, levees provide local relief of <3 m. Formerly a low open woodland. Richmond soils are poorly structured orange to red clay loams, clays and sands. Texture may increase with depth. Ironstone nodules may be present. Plastic clays in drainage lines, red earths and red podzolic soils occur on terrace surfaces with earthy sands on terrace edges. Limitations of the Richmond group include high erosion hazard on terrace edges and minor localised flooding.

The lithology observed during previous investigations has been described as follows:

- Fill materials over some portions of the site ranging from 0.15 m to 1.9 m depth. Fill was generally deeper underlying the commercial properties at the site, and shallower throughout the Allen Place car park. Fill materials were generally identified to comprise a combination of silts and clays with varying sand content. Colours were observed to be primarily brown and grey with some orange/yellow clays also encountered. Anthropogenic inclusions were observed within fill material from some locations;
- Shallow to moderately deep alluvial soils comprising clay to sandy clay (present from a depth of 0.4 m to 10.5 m below ground surface (bgs));
- Moderately deep to deep alluvial clay to sandy clay mixed with Nepean River gravels (present from a depth of 6.1 m to 13.0 m bgs); then
- Residual shale bedrock (present from a depth of 13.0 m to 15.0 m bgs).

3.4 Acid Sulphate Soils

No potential for acid sulphate soils has been identified at the site.

3.5 Salinity

The site exists within an area of 'moderate salinity potential'. Vegetation at the site during the site inspection did not exhibit any indicators of salinity related stress.

3.6 Hydrology

Rainfall is considered likely to migrate primarily through surface water runoff into the municipal stormwater system. Minor infiltration into the underlying porous soils and surface is also expected in areas of unsealed ground.

As discussed in **Section 3.2**, the site is largely covered by concrete, asphaltic pavements and building footprints. As such, surface water generated during periods of rainfall is anticipated to primarily enter the municipal stormwater system; via discharge into onsite stormwater catchment infrastructure or alternatively discharge into stormwater pits within the surrounding roadways. Increased infiltration is anticipated with the site's redevelopment as City Park

The nearest water body to the Site is Peach Tree Creek, approximately 1.1 km to the west of the site boundary. Peach Tree Creek ultimately contributes to the Nepean River. Municipal stormwater discharges to the Nepean River.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3.7 Hydrogeology

Registered groundwater bore information was obtained from the NSW Department of Primary Industries groundwater mapping tools. A review of the registered bore information indicated that there were thirteen bores within a 1.5 km radius of the Site. Based on the reported geology, topography and depth to groundwater, groundwater migration is expected to occur in a north-westerly direction, towards Peach Tree Creek approximately 1.2 km away. Groundwater has been reported in the surrounding properties within the river gravels layer. Previous assessments as completed on the site have reported groundwater depths ranging from 6.96 m to 8.05 m bgs, with ground contour maps indicating that groundwater flows in a north-westerly direction.

Registered groundwater bores located within a 1.5 km radius of the site are used for monitoring, recreational and testing purposes. Given the relatively dense urban use of the site and surrounding properties, in addition to the identified licensed bores, there is a moderate probability of additional undocumented bores near the site. No reported utilisation of groundwater as a drinking water source has been reported.

3.8 Air Quality

Air quality in the Penrith region is impacted by a range of air pollution emissions sources including major industry, motor vehicles, commercial operations and leaking pipes and tanks as well as from domestic activities such as solid fuel heaters.

Particles (or particulate matter) in the atmosphere come from a wide variety of sources, including soil (dust), vegetation (pollens and fungi), sea salt, fossil fuel combustion, biomass burning and industrial activities. Particles in the atmosphere typically exhibit a bi-modal sizes distribution with a peak in the range of 0.1-2.5 µm and a second peak in the range 2.5-50 µm. As a result particles with a diameter of up to 2.5 µm (PM2.5) are commonly referred to as fine particles. There is also a distinction in the health effects of different sized particles. Particles up to about 10 µm (PM10) diameter are inhaled, whereas larger particles are not. On this basis, the term ‘fine particles’ is often used to refer to PM10.

The most significant source of fine particles in proximity of the site are bushfire events (back burning or otherwise) and residential use of wood fired heaters during winter months.

Trace levels of a range of other constituents can often be reported in metropolitan environments including nitrous oxides and sulfur dioxide as consequent of a range of industrial processes and motor vehicle emissions. Trace levels of other hazardous gases can also occur in urbanised areas including petroleum hydrocarbons of relevance to the works being undertaken PCE. These trace levels in the case of petroleum hydrocarbons can be related to vehicle emissions. PCE is a commonly used cleaning solvent, and can occur form fugitive sources such as dry cleaning operations.

3.9 Flora and Fauna

No significant areas of native vegetation are present on the site. Isolated areas of vegetation, consisting of minor garden / grassed areas and some remnant native trees are present in isolate areas of the site between the expanses of pavement that characterise the extent of the car park and buildings on the site. These plant communities are not considered ecologically significant.

No significant fauna communities have been identified on the site. The historical commercial / developed nature of the Penrith CBD and proximity of more suitable habitats (i.e. Nepean River foreshore areas etc) restricts the potential for fauna occurrence on the site. No threatened fauna communities or species have been identified on the site.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3.10 Traffic

The site is located within the central business district of Penrith City and significant traffic occurs as associated with major local roadways in proximity of the site including High St, Henry St and Station St. Traffic is generally restricted to vehicle movements as associated with the local businesses in proximity of the site, which generally includes retail and professional services.

Heavy traffic is generally absent from the proximity of the site, apart from deliveries to existing businesses in proximity of the site. Passing heavy traffic is generally restricted to the Great Western Highway (Jane St) to the north of the site.

3.11 Noise

Noise levels in proximity of the site are typical of a CBD / retail / commercial environment. Common noise sources observed on the site include:

- Local traffic movements on Henry and Station Sts adjoining the site;
- Regional traffic movement on; and
- Existing retail activity as associated with the range of businesses / public service offerings in proximity of the site.

3.12 Heritage

No items of heritage significance are present on the site.

3.13 Aboriginal Relics

The site has been heavily modified over its development history from its natural state. Re-profiling and levelling of the site surface and substantial filling works that have been observed to occur have caused the alteration of the site. The occurrence of aboriginal relics is considered to be highly unlikely.

3.14 Hazardous Materials

The site has been historically developed since the late 1940's into the retail / commercial district currently present. This has included construction of a range of structures across the extent of the site as shown in **Figure 2**. The occurrence of hazardous building materials in structures has been assessed as per a hazardous materials building survey recently as included as **Appendix C**.

Hazardous materials identified on the site have included:

- Asbestos as present as friable asbestos dusts;
- Bonded asbestos building products;
- Lead containing dusts;
- Synthetic mineral fibres; and
- Polychlorinated biphenyl (PCB) containing light fittings.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3.15 Site Contamination Status

A number of previous contamination assessments have been prepared for the site. These are provided as **Appendices D** to **G**. The findings of these investigations are discussed following.

3.15.1 Preliminary Environmental Site Assessment Report

Council engaged Geo-Logix Pty Ltd (Geo-Logix) to conduct a preliminary ESA, Geo-Logix (2016) at the property located at 134-138 Henry Street, Penrith, NSW. The preliminary ESA is provided as **Appendix D**. The preliminary assessment was undertaken to assess the potential for contamination to exist at the site given the presence of Shop 3/134-138 Henry Street within the preliminary assessment area and the undertaking of a dry cleaning activity.

The preliminary ESA indicated that the site appeared to be vacant until the 1950s. In the period intervening construction of the current building layout and its former vacant use, the site was used for storage of materials. The building layout as observed in the current investigation was constructed during the 1960s and the dry cleaner operated from 1977.

Geo-Logix carried out passive soil vapour assessments at two locations within the dry-cleaning shop. Chlorinated ethenes (CEs) including tetrachloroethene (PCE), trichloroethene (TCE) and dichloroethenes (DCE) were detected in soil vapour samples at concentrations in exceedance of the commercial land-use criteria adopted for the assessment. Additionally, benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) compounds were detected within the soil vapour at concentrations above the laboratory limit of reporting (LOR) but below the commercial land use criteria. The preliminary ESA report identified the presence of potential asbestos containing materials (ACM) forming part of the construction of building within the assessment area.

The site was notified to the EPA by Council following the works undertaken by Geo-Logix in accordance with the reporting requirements under the *Contaminated Lands Management Act 1997*.

3.15.2 Phase 2 Environmental Site Assessment, JBS&G (2017)

JBS&G was engaged by Council to undertake a detailed site investigation (DSI) / phase 2 environmental site assessment at the site. The assessment is provided as **Appendix E**. The assessment was required to assess the potential for contamination to represent unacceptable risks to future site users based on future land uses proposed under the Central Park Village redevelopment.

Sampling and analysis works were undertaken including site inspection, sampling and analysis of soil samples, installation and sampling of groundwater monitoring wells and collection of soil vapour samples from sub-slab soil vapour locations. The assessment reported that the presence of buildings and occupied tenancies during the investigation precluded detailed assessment of all site areas.

Site conditions were observed to comprise hardstand pavements with underlying fill materials encountered to depths ranging from 0.2 m and 2.0 m bgs. Fill comprised a combination of silts and clays with varying sand content. Anthropogenic inclusions were observed within fill material at some locations.

Sample results from the soil vapour sampling and analyses indicated that CE impacts were present within the vicinity of the dry cleaner. Vapour impact was found to extend north of the dry cleaner, along the inferred groundwater flow direction, with exceedances of the adopted soil vapour criteria (PCE and TCE) at some locations.

Elevated levels of PCE and toluene were further in groundwater at one location in proximity of the dry cleaner, exceeding the most conservative of the assessment criteria adopted in the investigation. Detections of total recoverable hydrocarbons (TRHs) were also reported in multiple groundwater samples. The source of the TRH impact was unclear. The TRH concentrations were not considered representative of a risk to future onsite/offsite receptors.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Groundwater and soil concentrations within the vicinity of the dry cleaner also indicated the presence of CEs, primarily PCE and TCE, albeit at concentrations which were below the adopted site assessment criteria. With respect to the position of the dry cleaner, the inferred groundwater flow direction and available sewer diagrams, the presence of elevated PCE and TCE within the groundwater sample from the proximity of the dry cleaner indicates that CEs may have migrated along the sewerage infrastructure prior to their release into the environment.

3.15.3 Data Gap Investigation – Penrith Central Village Park

The Data Gap Investigation (DGI) comprised targeted soil, groundwater, soil-vapour and indoor air sampling. The assessment is provided as **Appendix F**. Sampling locations were undertaken within the vicinity of the former dry cleaner. It was reported that there were no statistically significant exceedances of the adopted site investigation criteria for the COPCs in soils; groundwater concentrations were less than relevant adopted environmental guidance values, with the exception of PCE in a well in closest proximity of the former dry cleaner; elevated levels of CE's were reported to exceed the adopted assessment criteria at one location in proximity of the former dry cleaners; elevated levels of CE's were reported in soil vapour at other locations in proximity of the dry cleaner; and the ,majority of indoor air measurements at the dry cleaner tenancy were below the adopted assessment criteria.

3.15.4 Pre Remediation Investigation

A pre-remedial investigation has been most recently completed on the site as targeted to the area of the dry cleaners, being Shop 3 Gaymark Lane as located at 134-138 Henry St Penrith. The assessment is provided as **Appendix G**. The assessment has comprised installation and assessment of sub-slab, shallow and deep soil vapour probes. Soil samples were further collected during the installation of the soil vapour probes and assessed for chlorinated ethenes.

The assessment has reported that where chlorinated ethene impact occurred in soils that it was non-leachable. The assessment further found that it was most likely that chlorinated ethene impacts were restricted to upper depth soils in proximity of the dry cleaners, and unlikely to an extend to a depth of 4 m bgs.

3.15.5 Summary of Contamination Issues

Areas of environmental concern are shown on **Figure 3** and summarised in **Table 3.1** following. Potential and known contaminated media comprise:

- Fill materials;
- Underlying natural soils;
- Subsurface vapour and ground gases; and
- Groundwater

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Table 3.1 Areas of Environmental Concern (AEC) and associated Contaminants of Potential Concern

Areas of Environmental Concern (AEC)	Contamination Status	Potentially Contaminated Media	Contaminants of Potential Concern (COPC)
AEC 1 – Former Dry Cleaner 134-138 Henry Street (Lot 1 DP164798) Improper disposal/management of dry-cleaning chemicals	Known	Soil, groundwater, soil-vapour and indoor air	Chlorinated Ethenes (PCE, TCE, DCE)
AEC 2 – Fill material Underlying Buildings Fill materials of unknown origin used for site levelling and activities associated with development. Application of COPCs as a result of general maintenance during site occupation (pesticides, herbicides, fuel and oil spills etc).	Potential	soils	Heavy metals, PAHs, TRH, BTEX, OCPs, PCBs, VOCs and asbestos
AEC 3 – Transformers Historical spillage/leakage of transformer oils underlying transformers within the Allen Place carpark.	Potential	Soils	TRHs and PCBs

AEC 1 Former Dry Cleaner

Soil, soil vapour and groundwater samples obtained during the DSI (Section 3.6.2) and DGI (Section 3.6.3) indicate that the greatest levels of chlorinated ethene impact is in the immediate vicinity 134-138 Henry Street and extending north and west of the premises. Detections of contaminant concentrations a considerable distance west of the premises provide evidence that the compounds may have migrated along the inferred sewerage infrastructure alignment.

AEC2 Fill Materials

Widespread impact has generally not been identified in fill based soils across the site. However detailed assessment of the soils has ben precluded by the extent of existing site structures and pavements. It is likely that asbestos impacts are present in these soils, and the extent of the same will be able to be determined once soils are able to be inspected following demolition works.

AEC3 – Transformer

There is a potential for dielectric fluids based contaminants to be present in close proximity / underlying the transformer. This will be able to be assessed following removal of the transformers.

3.16 Meteorology

A review of average climatic data for the nearest Bureau of Meteorology monitoring location (Penrith Lakes) indicates the site is located within the following meteorological setting:

- Average minimum temperatures vary from 5.5^{o} C in July to 18.5^{o} C in January;
- Average maximum temperatures vary from 17.7^{o} C in July to 30.7^{o} C in January;
- The average annual rainfall is approximately 728.1 mm with rainfall greater than 1 mm occurring on an average of 71.7 days per year; and
- Monthly rainfall varies from 30.6 mm in September to 121.4 mm in June with the wettest periods occurring on average in January to June.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4. Environmental Impact Assessment

4.1 Ecologically Sustainable Development

DUAP (1996) have defined ecologically sustainable development (ESD) in terms of the following four principles:

- The precautionary principle – namely, that if there are threats of serious or irreversible environmental damage, lack of full scientific certainty should not be used as a reason for the postponing of measures to prevent environmental degradation;
- Inter-generational equity – namely, that the present generation should ensure the health, diversity and productivity of the environment is maintained or enhanced for the benefit of future generations;
- Conservation of biological diversity; and
- Improved valuation and pricing of environmental resources.

There are no threats of serious or irreversible environmental damage associated with the proposed demolition and remediation of the site. As such, there is no requirement to invoke the precautionary principle. Adverse environmental impacts associated with the development will be minimal when subject to the proposed controls identified in the remainder of **Section 4** and when compared to the ongoing environmental impact as present on the site. Positive environmental impacts will occur consequent of the remediation of the site.

Inter generational equity is being achieved by the reduction of the availability of contamination to reduce potential exposures to environmental contamination to a level closer to those present on the site in its original condition (prior to urbanisation and development of Penrith). The recycling of materials on the site (where possible and as generated by demolition works) or transport to off-site recycling facilities, will enhance the environment for the future.

Current biological diversity on the site will be substantially enhanced. The current absence of flora and fauna will be addressed by the ultimate redevelopment of the site as City Park. Extensive green spaces, increased tree plantings etc as facilitated by the completion of the remedial works that will allow the construction of the City Park. There are no environmental impacts associated with the works that have been identified which would reduce the current biological diversity of the adjoining environment.

It is proposed to recover all materials possible which will be generated by the demolition works and transfer to recycling facilities in proximity of the site. The preferred remedial approach shall be to consolidate and encapsulate the contaminated soils within an appropriately designed structure on the-site. This will result in substantially reduced quantities of waste, and allow the utilisation of the available properties of the contaminated soils to act as an engineered fill. The recycling / re-use of materials, as opposed to simply disposing materials is evidence of the improved valuation and pricing of environmental resources that will be able to be achieved by the development.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4.2 Resource and Energy Use

The reduction of resource and energy use by PCC as a whole will be achieved in part by the demolition and remediation works proposed. PCC have identified a requirement to provide additional green space and recreational / leisure opportunities within the Penrith CBD. The remediation and ancillary demolition works on the City Park site will allow the site to be developed for the purpose of the proposed City Park.

Remediation works programs have been designed to minimise resource and energy use where possible. Options of on-site retention, re-use and ongoing management of contaminated materials have been selected in all stages of the Remedial Strategy (**Appendix B**) to preclude the potential for off-site transport and disposal having to occur.

4.3 Air Quality

There is a significant potential for air emissions from the proposed works. Potential significant sources of air emissions have been identified with the demolition and remediation phases of the works.

Potential sources of air emissions from demolition works include:

- Asbestos fibres from removal of asbestos containing materials from site building prior demolition;
- Particulate emissions from building demolition particularly inclusive of ground slab / footing removal; and
- Particulate emissions from pavement removal as proposed over the extent of the car parking area on the site.

Potential sources of air emissions from remediation works are substantially consequent of the proposed soils excavation / storage and handling aspects of these works. This will result in significant quantities of contaminated and non-contaminated soils being caused to be exposed. Potential air emissions that have been identified as associated these activities includes:

- Particulate emissions from exposed soils / soils handling and/or as associated with fugitive dust emissions from areas of pavement removal / non vegetated areas of the site;
- Potential asbestos fibre emissions from asbestos contaminated soils, particularly where asbestos impact occurs as friable forms of asbestos; and
- Potential chlorinated ethene vapour emissions from chlorinated ethene impacted soils.

A range of management measures are available to be implemented on site to eliminate or otherwise mitigate these potential air emissions. These are detailed in the Construction Environmental Management Plan (CEMP) as proposed for the project and included as **Appendix H**. As assessment of the likelihood of air emissions, considering the extent of available management actions, is summarised following:

- Asbestos emissions from demolition works will be minimised by undertaking the demolition works in a staged manner. All potential hazardous materials, including asbestos building materials, shall be removed from all structures by hand prior to undertaking bulk demolition. Environmental controls are available for the removal of asbestos including wetting of surfaces prior to handling / disturbance;
- Environmental controls inclusive of water sprays / wetting of surfaces will also be available to control potential emissions from pavement removal / building demolition. Controls are also available through management of the rate of demolition works and ceasing demolition works during unfavourable meteorological conditions;

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Similarly environmental controls are available to control potential environmental emissions from exposed soils / handling of soils. This will also include wetting of surfaces. Provision is also made in the CEMP for covering of stockpiles which will stop potential particulate emissions;
- The environmental controls as applied to soils to control particulates will be further effective to control potential asbestos fibre and chlorinated ethene vapour emissions. Notwithstanding, the area of chlorinated ethene vapours is relatively minor in extent and the chlorinated ethene constituents are generally not readily volatile from a soil matrix. Areas of asbestos impact, where they are identified, are also anticipated to be limited in extent. A range of studies are further available which demonstrate that asbestos fibres are not readily released from a soil matrix;
- Environmental monitoring methods are available to assess the potential levels of respirable fibres and speciated chlorinated ethene constituents. The assessment of monitoring results will allow the effectiveness of the management measures to be confirmed during the works.

On the basis of this assessment, it is considered that while potential significant air emissions may occur from the demolition and remediation works, appropriate management measures are available to eliminate or otherwise sufficiently mitigate potential emissions to a level that will not pose a potential health or ecological risk. Monitoring provisions are further available to ensure the effectiveness of these controls.

4.4 Surface Water Quality

Surface water will require to be controlled during parts of the demolition works and all stages of the remediation works. It is considered that the presence of excavations on the site will allow surface water to be minimised as surface water flows can simply be diverted into the excavations. However, where surface water leaves the site levels of contaminants will be required to have levels of impact below those stipulated NSW EPA endorsed water quality guidelines and as considered to be appropriate for fresh water receiving waters.

This will require measures to be put in place to prevent surface water being impacted by sources of sediment or site contamination. These will include:

- Controlling sources of surface water generation on the site;
- The retention where possible (i.e. for as long as possible) of existing stormwater control infrastructure located in contaminated areas of the site (requiring excavation);
- Isolation of impacted soil and stockpiles of demolished materials from sources of surface water by the construction of diversion drains, minimisation of stockpiles and covering of stockpiles; and
- The retention where possible of surface water on site, and the re-use of retained surface water (i.e. for dust control).

Surface water discharge will only occur from the site where water has been sampled and analysed and is found to have levels of impact in accordance with the relevant standards and guidelines.

An CEMP has been prepared for the works which includes procedures / measures which will be applied to both the demolition and remediation components to control potential surface water risks. The Plan also contains detail on appropriate guidelines and standards for water quality.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4.5 Groundwater Quality

The presence of contaminants in site groundwater has partially necessitated the site remediation works, and further influenced the design of the remediation works. The effect of the works comprising the removal of known contaminant source materials in areas of identified groundwater contamination, will have the effect of causing removing of the gross groundwater contaminants in these areas of the site.

No excavation works are proposed or otherwise permitted to extend of the depth of groundwater, precluding a requirement for dewatering. The reinstatement of the contaminated soils will be undertaken in a manner that precludes infiltration through the soils. As discussed in the Remedial Work Plan (**Appendix A**) this includes placement of the soils underlying areas of hardstand and/or provision of a geosynthetic clay liner (GCL) overlying the retained soils.

By prevention of further leaching of chlorinated ethenes from contaminated soils, and removal of the chlorinated ethene contaminated soils from the current area of groundwater impact, existing levels of chlorinated ethene sin groundwater will be anticipated to rapidly attenuate preventing any potential future groundwater risk.

4.6 Noise

There is a potential for noise emissions to occur during the remediation and demolition works. This potential relates to:

- Use of heavy machinery to undertake demolition works;
- Use of heavy machinery to excavate soils
- Break up of concrete paving on the site; and
- General site operation.

Noise emissions during particularly the demolition and pavement break up phases will be unavoidable during the works. The location of the site within an established retail area will mitigate the significance of some of the noise emissions. The area of the site is already characterised as a significant noise environment and the impacts from the site will be somewhat attenuated by the existing noise levels. It is further noted that the demolition / pavement break up phases of the project will occur over a relatively short duration which will further reduce the significance of the environmental emissions.

Measures are further available in the CEMP prepared for the site to reduce potential noise impacts (**Appendix H**). This includes provision of site hoarding in close proximity of high noise activities and inclusion of silencers / noise mitigation to noisy activities. Examples would include:

- Assessment of the condition of exhaust systems on the excavators / other heavy machinery to ensure that they are operating efficiently;
- Provisions of shrouds / enclosures to generators / pumps as used with the site works;
- Maintenance of a communication and complaints register to ensure that any concerns of local residents and members of the public are recorded and addressed; and
- Concerns over noise generation to be communicated to all site personnel and contractors during site inductions particularly noting the prevalent location of the site.

Work hours will further be restricted to times when the greatest levels of existing / background noise occur which will further mitigate the perceived impact of noise emissions.

A detailed Construction Noise & Vibration Management Plan is further provided in **Appendix K**.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4.7 Traffic

From the time of the late 1940's until currently the site has had a significant traffic generating potential. This has been by the continual movement of motor vehicles and associated product deliveries / pick-ups in and out of the site, ranging from passenger cars to large semi-trailers and B-doubles. Penrith has been an established highly urbanised area industrial area for at least 70 years and as a result has a significant inherent traffic generating potential. Consequently, the surrounding road network has been designed to cope with significant volumes of heavy vehicles.

The demolition works in particular, and the remediation works to a substantially reduced extent, have the potential to generate discrete, short-term, increased traffic volumes. This is related to the removal of demolition wastes and materials for recycling from the site. Heavy vehicle traffic may also be generated by the delivery of construction machinery to the site, and the delivery of small quantities of filling material as may be required during the remediation works. It is not envisaged that heavy vehicle traffic would exceed 20 movements in any one day, and is considered to be less than the current traffic generation of the current use of the site for a range of retail, services and commercial uses.

Of particular note potential traffic generation of the remediation stage of the works will be substantially reduced by a remedial approach adopted that retained contaminated soils on-site. Instead of 100's of heavy vehicle movements being generated by the transport of this material to landfill, a remedial method has been developed which allows these materials to be managed on-site in the future. Minimal traffic movements (beyond worker attendance and departure from the site) are anticipated to be generated by the remediation stage.

Heavy vehicles will be restricted to main roads only, travel along local roads will be eliminated where possible. Traffic routes, site entry and exit points will be stipulated in the CEMP as following the detailed design of the proposed works and by update of the document.

Traffic movement during the remediation works will be minimised by the treatment of impacted soils on-site.

4.8 Soil Quality

Soil quality on the site will be improved by the completion of the demolition and remediation works. Chlorinated ethene and asbestos impacted soils as currently distributed across the extent of the site will be excavated and consolidated in a central area of the site. The impacted soils will be retained within a purpose designed structure that will preclude potential exposure of human and ecological users of the site, and underlying groundwater, to impact as present within the soils. This will have the effect of improving soil quality across the site through:

- Localising contaminated soils to a smaller extent of the site, and re-instating with non-contaminated soils through the disposed locations of impact;
- Placement of non-impacted soils overlying the area of retained contaminated soils, facilitating exposure to better quality soils for human and ecological receptors on the site; and
- Facilitating the site development as City Park, which will include importation of specialised growing medias to support the extent of landscaping proposed.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4.9 Visual Amenity

Noting the established urbanised nature of the Penrith CBD and the confinement of stockpiling works associated with the remediation works to areas of the site not readily visible or otherwise significant set back from public roadways, the potential visual impact of the works is considered to be insignificant. It is noted that current visual amenity of the site inclusive of aged shopfronts and the Allen Place car park is most appropriately described as poor.

The CEMP as prepared for the site includes provision for screening to be provided to site fences to minimise potential visibility of the demolition and remediation works.

4.10 Hazards and Health Issues

The control measures to be implemented throughout the demolition and remediation works are designed to prevent adverse impacts to the health of on-site workers and the surrounding community. The strategy developed in the Remedial Work Plan (**Appendix A**) and Remediation Action Plan (**Appendix B**) to protect human health consist of five main elements, these include:

- Management controls such as the preparation and implementation of an Construction Environmental Management Plan and Health and Safety Plan;
- The approach taken to demolishing and remediating the site;
- The work procedures and control measures implemented;
- Monitoring the health of on-site workers; and
- Monitoring of the local environment both on-site and at site boundaries.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

5. Legislative Requirements

5.1 Environmental Planning and Assessment Act 1979

The development proposed will be required to be assessed as per the relevant factors provided to section 4.15 of the *Environmental Planning and Assessment Act 1979*. The relevant factors are provided following:

4.15 Evaluation

(1) Matters for consideration—general In determining a development application, a consent authority is to take into consideration such of the following matters as are of relevance to the development the subject of the development application: …

…(1) (b) the likely impacts of that development, including environmental impacts on both the natural and built environments, and social and economic impacts in the locality, …

… (1) (e) the public interest.

The impacts of the development have been described in Section 4 of the SOEE and are considered to be acceptable. A net positive benefit will be generated by the remediation of environmental impact located on the site. It is further considered that it is the public interest that the site is demolished, remediated and made ready from an environmental perspective for a proposed redevelopment as City Park.

5.2 Environmental Planning and Assessment Regulation 2000

Schedule 3 provided to the *Environmental Planning and Assessment Regulation 2000* provides guidance as to the classification of development as designated development. The demolition and remediation of the site (where the demolition is being undertaken to facilitate the remediation and rehabilitation of the site) is most appropriately described in the Schedule as 'contaminated soil treatment works'. The requirement to designate a 'contaminated soil treatment works' is described following:

15 Contaminated soil treatment works

Contaminated soil treatment works (being works for on-site or off-site treatment of contaminated soil, including incineration or storage of contaminated soil, but excluding excavation for treatment at another site):

(a) that treat or store contaminated soil not originating from the site on which the development is proposed to be carried out and are located:

(i) within 100 metres of a natural waterbody or wetland, or

(ii) in an area of high watertable or highly permeable soils, or

(iii) within a drinking water catchment, or

(iv) on land that slopes at more than 6 degrees to the horizontal, or

(v) on a floodplain, or

(vi) within 100 metres of a dwelling not associated with the development, or

(b) that treat more than 1,000 cubic metres per year of contaminated soil not originating from the site on which the development is located, or

(c) that treat contaminated soil originating exclusively from the site on which the development is located and:

(i) incinerate more than 1,000 cubic metres per year of contaminated soil, or

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

(ii) treat otherwise than by incineration and store more than 30,000 cubic metres of contaminated soil, or

(iii) disturb more than an aggregate area of 3 hectares of contaminated soil.

The proposed development is not classified as designated development. The development is covered solely by part C of the designation. No incineration of soils will take place. A quantity well below 30,000m^3 of soils will be handled on the site, and the surface area of impacted soils is well below 3 hectares. Impacted soils are present in localised areas of the site.

5.3 Protection of the Environment Operations Act 1997

The *Protection of the Environment Operations Act 1997* provides guidance on the acceptable level of environmental emissions from a facility or site. As per the assessment provided to Section 4 of the SOEE, environmental emissions from the site will be minimised at all times, and controlled to levels required by the Act.

By a similar test described in **Section 5.2** for designated development, the demolition and remediation works do not require a licence under the Act.

5.4 Contaminated Land Management Act 1997

The site has not been assessed as being sufficiently contaminated by the NSW EPA that the site warrants notification under the *Contaminated Lands Management Act 1997*. Consequently the site is currently not impacted by the Act. The site will not be used for a more sensitive land-use (i.e. the City Park) development until such time that remedial works have been completed on the site.

However, a Site Auditor, accredited under s.50 of the Act will be engaged to prepare an anticipated statutory Site Audit Statement (anticipated requirement of development consent) as per s.47(2)(b) of the Act (a potential requirement as nominated in Section 5.13 of the SOEE). The Site Audit Statement will allow the site to be used for a range of potential beneficial uses. The Site Audit Statement will be furnished to PCC at the completion of the works.

5.5 Water Act 1912

The *Water Act 1912* contains guidelines for the protection and requirements to access of sub-surface waters (i.e. groundwater). There are no proposals to dewater, excavate to the depth of groundwater, or otherwise interfere with groundwater underlying the site. The Act does not apply to the works.

5.6 Waste Avoidance and Resource Recovery Act 2001

The *Waste Avoidance and Resource Recovery Act 2000* requires wastes to be treated as per a hierarchy of methods, with re-use, treatment and recycling being preferred ahead of waste disposal. Where possible, materials generated by the demolition works will be transported off-site for recycling. Where this is not possible, demolition materials will be transported to off-site recycling locations (i.e. scrap metal recyclers). Impacted soils are proposed to be retained on site and zero sum balance of soils as created by the excavation and filling works that will be undertaken to implement the proposed long-term management. The works have been designed so as to minimise the requirement for any off-site disposal.

5.7 Protection of the Environment Operations (Clean Air) Regulation 2010

The *Protection of the Environment Operations (Clean Air) Regulation 2002* provides standards for discharge of air impurities from plant and equipment and guidelines for the scheduling of plant and equipment. There is no fixed plant provide don the site and this Regulation does not strictly apply to the works. Notwithstanding provisions have been advised through the SOEE and in the CEMP as prepared for the works to ensure that air emissions form the site are reduced to the extent practicable.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

5.8 Protection of the Environment Operations (Waste) Regulation 2014

The *Protection of the Environment Operations (Waste) Regulation 2014* makes requirements relating to non-licensed waste activities and waste transporting. The proposed works on the site will not require to be licensed. Section 48 of the Regulation requires that wastes are stored in an environmentally safe manner. It is also stipulated that vehicles used to transport waste must be covered when loaded. Part 7 of the Regulation applies specifically to asbestos waste as will be generated by the proposed demolition works. Consistent with the requirements of the CEMP asbestos waste shall require a formal tracking system to be implemented.

5.9 State Environmental Planning Policy 11 – Traffic Generating Development

State Environmental Planning Policy (SEPP) 11 provides for the Roads and Traffic Authority to comment on traffic generating developments. The development as proposed has the potential to generate minor amounts of traffic. Traffic will only be consequent of the removal of materials from the site, and will occur for the duration of the works. Traffic will be restricted to main roads. It is noted that only enlargement or extension to existing facilities nominated within the Schedule provided to the SEPP. It is not proposed to enlarge or extend the terminal. Thus SEPP 11 does not apply to the development.

5.10 State Environmental Planning Policy 33 – Hazardous and Offensive Industries

State Environmental Planning Policy (SEPP) 33 provides a framework for the merit based assessment of potentially hazardous and offensive industry. DUAP (1997) 'Applying SEPP 33, 2nd Edition' provides guidelines for determining as to whether SEPP 33 applies to a development. This is undertaken as per a screening procedure.

It is found that SEPP 33 does not apply to the development. The development does not require any pollution control licences. The development is not considered to be potentially hazardous as per Table 3 and Figure 9 of DUAP (1997) – as no fuel storage or handling is specifically required for this development consent.

5.11 State Environmental Planning Policy 55 – Remediation of Land

State Environmental Planning Policy (SEPP) 55 facilitates control over the remediation of contaminated land. A process is provided in s.9 provided to the SEPP to define whether remediation work is classified as a Category 1 or 2 remediation. The remedial works would potentially be classified as Category 2 works, however the demolition works as required to be undertaken to allow the remediation works to be implemented require development consent. On this basis the remedial works have been prepared as Category 1 works and have been addressed in this development application.

5.12 Sydney Regional Environmental Plan 20 – Hawkesbury – Nepean River 1997

The site is located within the sub-catchment boundary as advised in the maps provided to the Regional Environmental Plan (REP). The site is located outside of the extent of the boundary of application of the REP. Potential impacts to waterways in proximity of the site have been considered in the assessment to the SOEE and measures are available to eliminate / mitigate any potential impacts.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

5.13 Penrith Local Environmental Plan 2010

The site is located within an area zone B3 and RE1 as per the Local Environmental Plan (LEP). The objectives of the RE1 zone include:

- To enable land to be used for public open space or recreational purposes;
- To provide a range of recreational settings and activities and compatible land uses;
- To protect and enhance the natural environment for recreational purposes;
- To ensure that development is secondary and complementary to the use of land as public open space, and enhances public use, and access to, the open space; and
- To provide land for the development of services and facilities by public authorities for the benefit of the community.

The objectives of the B3 zone include:

- To provide a wide range of retail, business, office, entertainment, community and other suitable land uses that serve the needs of the local and wider community;
- To encourage appropriate employment opportunities in accessible locations;
- To maximise public transport patronage and encourage walking and cycling; and
- To strengthen the role of Penrith City Centre as the business, retail and cultural centre of the region.

The completion of the demolition and remediation works will allow the construction of the City Park, which consistent with the project description as provided to **Section 2.5**, will allow the use of the site to meet the relevant objectives of the RE1 and B3 zones.

Environmental protection works are permissible with development consent under these zonings. Notwithstanding specific classifications to SEPP 55, the remedial works would be most appropriately described as environmental protection works.

5.14 Penrith Development Control Plan 2014

Section C4 Land Management of the Penrith Development Control Plan 2014 (DCP) provides a general objective of minimisation of land contamination through inappropriate landfill or pollution of land and maximisation of remediation of contaminated land. This will be achieved by the implementation of the demolition and remediation works proposed here.

A range of requirements for contaminated land are provided to Section 4.4. of the DCP. These have been addressed as detailed through this SOEE inclusive of:

- Completion of contamination assessments / investigations (included as **Appendices D** to **G** and summarised in **Section 3.15**);
- Appointment of a Site Auditor as accredited under the CLM Act and Site Audit of contaminated site documents. The most recent Site Auditor advice, which is an independent review of the proposed remedial plans, is provided as **Appendix J**;
- Preparation of a Remedial Work Plan and Remedial Action Plan as provided as **Appendix A** and **B** respectively;
- Monitoring of remedial works is proposed through validation procedures to the remedial plans and further detailed within the CEMP (provided as **Appendix H**); and
- It is proposed to prepare a Validation Report at the completion of the remedial works as detailed in the Remedial Work Plan and Remedial Action Plan as provided as **Appendix A**

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

and **B** respectively. A long-term Environmental Management Plan to ensure the maintenance of the validated condition of the site has been further prepared as a draft and is included as **Appendix I**.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

6. Conclusions and Recommendations

A range of previous site investigations have identified that soils on the site are subject to levels of environmental contamination that restrict the site's proposed future use as City Park. The proposed demolition and remediation works will address the extent of contaminated soils present on the proposed City Park site to make the site environmentally suitable for a future redevelopment as City Park.

The development has been found to be permissible, with development consent from Penrith City Council. In accordance with the limitations provided as **Section 7** a range of potential environmental emissions have been identified with the completion of the works. However where control / monitoring methods as detailed in the Remedial Works Plan and Construction Environmental Management Plan are implemented these impacts can be managed to level to not pose an unacceptable environmental impact to the surrounding community. The site will require to be managed in accordance with the draft Long-Term Environmental Management Plan following the remedial works.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

7. Limitations

This report has been prepared for use by the client who has commissioned the works in accordance with the project brief only, and has been based in part on information obtained from the client and other parties.

The advice herein relates only to this project and all results conclusions and recommendations made should be reviewed by a competent person with experience in environmental investigations, before being used for any other purpose.

JBS&G accepts no liability for use or interpretation by any person or body other than the client who commissioned the works. This report should not be reproduced without prior approval by the client, or amended in any way without prior approval by JBS&G, and should not be relied upon by other parties, who should make their own enquires.

Sampling and chemical analysis of environmental media is based on appropriate guidance documents made and approved by the relevant regulatory authorities. Conclusions arising from the review and assessment of environmental data are based on the sampling and analysis considered appropriate based on the regulatory requirements.

Limited sampling and laboratory analyses were undertaken as part of the investigations undertaken, as described herein. Ground conditions between sampling locations and media may vary, and this should be considered when extrapolating between sampling points. Chemical analytes are based on the information detailed in the site history. Further chemicals or categories of chemicals may exist at the site, which were not identified in the site history and which may not be expected at the site.

Changes to the subsurface conditions may occur subsequent to the investigations described herein, through natural processes or through the intentional or accidental addition of contaminants. The conclusions and recommendations reached in this report are based on the information obtained at the time of the investigations.

This report does not provide a complete assessment of the environmental status of the site, and it is limited to the scope defined herein. Should information become available regarding conditions at the site including previously unknown sources of contamination, JBS&G reserves the right to review the report in the context of the additional information.

1. Introduction

1.1 Background

JBS&G Australia Pty Ltd (JBS&G) was engaged by Penrith City Council (Council, the client) to provide environmental consultancy services associated with the proposed redevelopment of the Penrith City Village Park (PCPV). It is understood that the client is proposing to develop the western portion of PCPV (herein, referred to as the 'site') for contemporary public open space. The site area is shown on **Figures 1** and **2**. In addition, the address and legal identification of each property within the site is provided in **Table 2.1**.

An overarching Remedial Action Plan (RAP) (JBS&G 2019a[1]) for the broader PCPV site (as defined by the blue dashed line on **Figure 2**) was previously prepared to facilitate feasibility planning and costing for the overall development. Upon development of detailed design plans and establishment of project staging, remedial work plans (RWPs) were intended to be prepared to facilitate the staged remediation of specific portions of the PCPV site. This RWP has been prepared for the site (western portion of PCPV) with consideration to the RAP (JBS&G 2019a) and the findings of a pre-remediation investigation (JBS&G 2020[2]), in which the nature and extent of environmental impacts was further delineated by an additional soil and soil vapour sampling program.

Taking into consideration that the objectives of any remedial works and environmental management procedures set out in the RAP (JBS 2019a) are still valid, this RWP has been prepared to detail the contaminated soil remediation / management requirements during site redevelopment, consistent with the preferred scope and method of remediation documented in the RAP (JBS&G 2019a) as specific to the site area shown on **Figures 1** and **2**.

1.2 Objectives

The objectives of the RWP are to:

- Detail the works required to remove and/or manage the identified soil contamination to render the site suitable for the proposed use, in accordance with relevant guidelines, the existing RAP (JBS&G 2019a) and the refined remedial extent as advised by JBS&G (2020b); and
- To document validation measures to enable validation of remediation works consistent with current EPA endorsed guidance.

It is noted that this RWP will be revised upon receipt of the additional investigation results proposed to be completed prior to remediation works as outlined in JBS&G (2020). The remedial works outlined herein have been presented to facilitate remedial works planning.

[1] *Overarching Remedial Action Plan*, Penrith Central Park Village, 114 to 146 Henry Street, 42 to 50 Station Street and Allen Place Car Park, JBS&G Australia Pty Ltd, 5 March 2019 (JBS&G 2019a).

2. Site Condition and Surrounding Environment

2.1 Site Identification

The site location is shown on **Figure 1**. The extent of the site and associated cadastral boundaries are shown on **Figure 2**. The site details are summarised in **Table 2.1** and described in detail in the following sections.

Table 2.1: Summary Site Details

Property Identification and Street Addresses	The site is comprised of the following legal properties: • Lot 1 in DP 164798 and Lot 1 in DP 252457 – 134 to 138 Henry Street • Lot 10 and 11 in DP 553665 – 140 to 142 Henry Street • Lot 2 in DP 556075 – 144 Henry Street • Lot 3 in DP1200790 – 42 to 44 Station Street • Lot 1 in DP 526304 – 48 to 50 Station Street • Lot E in DP 163176 – 46 Station Street In addition, the site area includes portions of the Allen Place Car Park.
Local Government Authority	Penrith City Council
Approximate MGA Coordinates (MGA 56)	Easting: 286582.2 Northing: 6262912.7
Site Zoning	Commercial Core (B3) and Public Recreation (RE1) under Penrith Local Environmental Plan (LEP) 2010
Current Use	Commercial (car parking, retail and services)
Previous Use	Commercial/industrial (car parking, dry cleaning and general retail/services) and residential
Proposed Use	Public open space
Site Area	Approximately 0.71 ha

2.2 Site Description

The key features from the areas that form the focus of this pre-remediation investigation are discussed in the following sections and shown on **Figure 3**. Observations were made by an experienced JBS&G consultant on 18 May 2020 during an inspection of accessible areas of the site.

2.2.1 The Dry Cleaner, 134-138 Henry Street, Penrith

The former dry cleaner comprised the northern third of the building (referred to as Shop 3, Gaymark Lane) located at 134-138 Henry Street, Penrith. The shop-front occupied most of the building footprint (>85 %), with the remainder comprising a secluded water closet, storage space and point of sale. The premise was vacant during the period of the investigation.

The water closet comprised a small (<3 m^2), fully enclosed space which was serviced by two separate sewerage disposal points. Detergents, household solvents and soaps were observed to be stored within the water closet. The shop-front was serviced by an air exchange (air-conditioning) unit which was observed to be operational during each visit to the premises.

In the alleyway between the dry cleaner and Shop 3 (140 Henry Street, described below), numerous services were present. Sewerage infrastructure and stormwater pipes ran in a north to south orientation, connecting stormwater and sewerage pipes to the greater system, south of the premises. Services were noted to comprise a mixture of terracotta and polyvinyl chloride (PVC) pipes.

The southern portion of 134-138 Henry Street was inaccessible during the period of the investigation, in which it is noted a café was operating.

2.2.2 Shop 3, 140 Henry Street, Penrith

None of the building spaces located on 140 Henry Street were accessible during the period of the investigation due to business/tenants still operating. Therefore, the observations described below

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

are based on an inspection by a suitably qualified and experienced JBS&G environmental consultant conducted on 3 May 2018 and detailed in the RAP (JBS&G 2019a).

Shop 3 comprised the southern half of the building located at 140 Henry Street, Penrith. The shop was partitioned into four rooms and a water closet, joined by a central hallway. The premises housed an alternative health centre at the time of the inspection.

The shop-front rooms were serviced by air exchange units (air conditioners) which were observed to be in operation during each site visit. The water closet comprised a small (<5 m^2), fully enclosed space which was serviced by two separate sewerage disposal points.

An inspection of the property revealed the presence of household cleaning and medical products: limescale solvents, surface cleaners, stain removers, methylated spirits, polishes, pest control products, ethanol-based surface wipes and carpet deodorisers.

2.3 Environmental Setting

A detailed review of the environmental setting at the site is provided in the RAP (JBS&G 2019a) and pre-remediation investigation (JBS&G 2020) and is therefore not repeated herein.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3. Responsibilities

3.1 Client Supervisor / Manager

The client supervisor/manager is responsible for:

- Ensuring all works are compliant with a future development approval;
- Providing direction to the remediation contractor and environmental consultant; and
- Community consultation as required.

3.2 Remediation Contractor

The remediation contractor is responsible for:

- Ensuring all works are undertaken as per the RAP (JBS&G 2019a), this RWP, and in accordance with appropriate instruction from the client supervisor/manager and environmental consultant;
- Ensuring all works are undertaken in accordance with appropriate regulations and standards;
- Preparation of a health and safety plan (HASP) to document controls and monitoring to eliminate/minimise potential occupational risks to the site workforce. Ensuring all works are undertaken as per the health and safety plan and ensuring a copy of the health and safety plan is available at the site during the remediation/validation activities;
- Preparation of a Construction Environmental Management Plan (CEMP) to detail how potential emissions from the remediation works will be managed/mitigated and minimise potential exposures of the adjoining community. Undertaking all works in accordance with the requirements of the CEMP;
- Confirming individuals are inducted to the HASP, CEMP and are aware of the requirements of these documents as well as ensuring they are competent in performing allotted tasks;
- Liaison with the client supervisor/manager and contractor representatives, as appropriate, regarding safety matters;
- Maintaining communication with the adjoining community and provision of all remedial data as necessary to Council to facilitate community consultation processes; and
- Investigation and reporting of incidents and accidents.

3.3 Environmental Consultant

The environmental consultant is responsible for:

- Undertake remediation and validation sampling as per the RAP (JBS&G 2019a) and this RWP;
- If required, undertake air quality monitoring as consistent with the provisions of an air quality management plan to assess potential emissions from the remediation works and the associated risks to site workers and the adjoining community;
- Ensuring consultant works are undertaken as per the relevant health and safety plan;
- Liaison with the contractor representatives, as appropriate; and
- Provision of monitoring and/or validation data to the client as necessary to inform community consultation.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4. Contamination Issues Requiring Remediation

Soil remediation works are required to be conducted in accordance with Section 7 of the RAP (JBS&G 2019a).

4.1 Fill Material Underlying Buildings (AEC4)

Fill materials underlying buildings have not yet been appropriately assessed and may require management/remediation during development works.

Based on the available data, it is anticipated that potential impacts within fill materials are most likely to comprise of asbestos, where it is noted that asbestos impacted fill-based soils have previously been identified on PCPV. However, the degree of asbestos impacts in soils has not been comprehensively assessed within the extent of the site and therefore the extent of required remediation (if any) to manage asbestos in soil impacts is not yet known. As site demolition occurs and concrete slabs are progressively removed across the site, the extent of asbestos impacts (as well as other contaminants of potential concern (COPCs)) in fill-based soils will need to be assessed by the environmental consultant to determine if management of the materials is required. A sampling plan outlining the proposed scope and methodology of the assessment will be submitted to the Site Auditor for review and endorsement prior to commencement of the investigation works.

4.2 Chlorinated Ethene Impacted Soils (AEC1)

Chlorinated ethene (CE) impacted soils underlying 134-138 and 140 Henry Street require management to be protective of future off-site receptors in basements/buildings to the east (within the PCPV development) and removal of on-going source material to groundwater impacts.

The final remedial extent relating to CE impacted soils has not yet been defined due to tenants currently occupying the majority of commercial spaces within the area of concern. Preliminary data as presented in JBS&G (2020) identified elevated levels of tetrachloroethylene (PCE) and trichloroethylene (TCE) in sub-slab vapour at all locations underlying Shop 3 Gaymark Lane (as represented by SS01 to SS09). In addition, elevated levels of TCE and PCE were reported at historical sub-slab vapour sample locations SV10 and SV14 as collected by JBS&G in previous sampling events. Conversely, the levels of TCE and PCE within samples at SV12 to SV18 were below laboratory detection limits, providing evidence that soil vapour has not migrated to this lateral extent. On this basis, the inferred lateral extent of CE impacted soils acting as potential source material (to soil vapour) is shown on **Figure 3** – equating to an area of approximately 650 m^2. It is noted that the lateral source material extent has been conservatively included to comprise of the area around SV18 and extending west towards SV12-SV17 and east towards Gaymark Lane, where limited data has been collected to date.

To inform the likely depth of CE source material, JBS&G installed soil vapour probes at depths of 1 m and 4 m at locations SV10 and SV11. At both locations, elevated levels of TCE and PCE were detected in the shallow probe (1 m) but below detection limits in the deeper probes (4 m). This data provides evidence that the low permeability clay soils at the site have retarded the vertical migration of these impacts at the site. This is concordant with the visually observed depth of more permeable fill material overlying residual clays and the detection of PCE within the shallow soil sample SV11 0.2-0.3 (2.2 mg/kg) that was in turn, reported at below detection limits in all underlying soil samples. An estimated excavation depth of 1.5 m bgs is provided on this basis, noting that the depth of fill may vary between and surrounding investigation locations. Based on the current data and associated limitations, an inferred lateral area of 650 m^2 over an average excavation depth of 1.5 m and assuming a contingency factor of +50% for depth and/or lateral variation equates to an approximate volume of 1,500 m^3 in-situ potentially requiring remediation.

However, to date, the location where chlorinated hydrocarbon impacts have historically migrated from the shallow soils to underlying groundwater (that is approximately 7 m below ground surface)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

has not been determined - noting that the inferred vertical remediation depth of 1.5 m bgs has been informed by only two deep soil vapour probes within a limited area as well as depths of more permeable fill materials in the source area.

Based on the potential that the former site operator may have disposed of dry-cleaning fluids either down the sewer or stormwater drains, the greatest impacts are expected within the trenches of these underground utilities that extend from the property. Therefore, the remediation works outlined herein, designed to remove the CE impacted soils acting as on-going source material, will be required to remediate any impacted soils identified within underground trenches associated with these utilities within the site extent.

4.3 Soils Underlying Transformers (AEC3)

As noted in the RAP (JBS&G 2019a), soils underlying the transformer in the south-eastern portion of the site have not been assessed. During decommissioning of the transformer and subsequent removal of hardstand, the extent of potential impact to underlying soil will need to be assessed to in accordance with Section 7.6.3 of the RAP (JBS&G (2019a) in order to determine if remediation and/or management of the materials is required. A sampling plan outlining the proposed scope and methodology of the assessment will be submitted to the Site Auditor for review and endorsement prior to commencement of the investigation works.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

5. Remediation Methodology

As consistent with the RAP (JBS&G 2019a), the preferred remediation methodologies for impacted soils outlined herein were developed in accordance with The *Contaminated Land Management: Guideline for the NSW Site Auditor Scheme* (EPA 2017[3]) and ecologically sustainable development (ESD) principles as detailed in the following sections.

5.1 Potential Impacted Fill (AEC4)

As per **Section 4.1**, it is anticipated that potential impacts within fill materials are most likely to comprise of asbestos. Should other contaminants be identified within fill based soils that require management, then the remedial screening options outlined in the RAP (JBS&G 2019a) will require review. The preferred remediation approach will require approval by the site Auditor prior to implementation.

The remediation methodology for potential asbestos impacts will be dependent upon the nature of the impacts and the preferred management approach. This will be determined following the assessment of the type and extent of asbestos impacts at the site.

Based on historical investigations completed at the site, it is not anticipated that widespread asbestos impacts will be encountered at the site. On this basis, any asbestos impacts will likely be localised in which the preferred remedial methodology will comprise excavating the impacted soils to the extent directed by the environmental consultant where validation is achieved. As consistent with the RAP (JBS&G 2019a), any excavated asbestos impacted soils will then be managed via containment and the implementation of physical separation or within a "Capping Layer", which eliminates the direct contact exposure pathway for impacted soils. The hardstand to be constructed as part of the site development works will act as a capping layer where present across the site. In proposed grassed/vegetated areas and service trench alignments, the minimum requirements for the physical separation to be adopted in the remediation of the site include:

- Marker Layer - comprising a bright orange geotextile, such as "Bidim" or similar geotextile, is to be installed prior to placement of the capping layer. The marker layer is required to be easily recognisable in soils (i.e., bright orange in colour), be durable as a long term marker layer (i.e., >150 grams per square metre) and maintain integrity during remedial/civil works.
- Capping Layer - A minimum 1.0 m (after compaction) capping layer of soil capping material / thickness is required to manage access to asbestos impacted soils across the areas subject to containment. Material imported to site for use as a capping layer will be required to be environmentally suitable material for human and/or ecological exposure (as appropriate). Imported material shall comprise imported virgin excavated natural material (VENM) or material certified in accordance with an exemption issued by the NSW EPA (i.e. ENM, recycled fines etc) and the RAP (JBS&G 2019a).
- Should services extend through asbestos impacted soils, then they will be required to be placed in dedicated alignments, demarcated (with a marker layer at the base and walls of the trench) and backfilled with clean material to avoid exposure to underlying impacted material during subsequent maintenance or excavation work.

5.2 Chlorinated Ethene Impacted Soils (AEC1)

5.2.1 Management of Underground Utilities

Noting that CE impacted soils are anticipated to be present within service trenches (particularly sewer and stormwater) underlying 134-138 and 140 Henry Street, the first step in the remediation of

[3] *Contaminated Land Management: Guideline for the NSW Site Auditor Scheme (3ed Edition). NSW EPA 2017 (EPA 2017)*

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

CE impacted soils will comprise the decommissioning of all underground utilities within the remediation area, in order to allow remedial excavation works to proceed.

5.2.2 Excavation and Stockpiling of Impacted Soils

The second step of remediation works will be the excavation of CE impacted materials to be conducted by the contractor. The anticipated lateral extent of the required remedial excavation is presented on **Figure 3**. The vertical extent of remedial excavations is anticipated to extend to an average depth of 1.5 m bgs, although deeper excavations are anticipated in areas of greater impact (i.e. potentially within service trench easements).

The excavated impacted soils will then be temporarily placed in 70 m^3 stockpiles in accordance with Sections 7.6.4 and 8.2.6.6 of the RAP, pending further assessment by the environmental consultant for suitability for on-site containment in accordance with **Section 6.1.2**. Should the materials be assessed as non-suitable for on-site retention, they will be disposed off-site in in accordance with **Section 5.4** and Section 8.7.2 of the RAP. All excavated materials will be subject to suitable materials tracking in accordance with Section 7.6.9 of the RAP.

5.2.3 On-site Containment

CE impacted materials assessed as suitable for on-site retention will be consolidated into a single stockpile prior to final placement within an on-site containment cell. The containment cell will be located at least 30 m lateral distance away from current and future on and off-site structures (to preclude the potential for vapour intrusion) and located above the groundwater table (approximately 7 m bgs) to mitigate any on-going risks to groundwater. In addition, the containment cell will be located under future hardstand or placed under a geosynthetic clay liner (GCL) with a hydraulic conductivity of less than 5 x 10^{-11} m/s (as consistent with the product specifications of Bentofix, provided in **Appendix A**) to further mitigate any on-going risks to groundwater. The approximate location of the containment cell is shown on **Figure 5**, however its final location will be informed by the volume of materials that require containment – where it is noted, that the containment cell cannot intercept existing/future underground service corridors/easements. In addition, the containment cell will be required to be suitably capped (in areas not covered in hardstand) as per the following specifications:

- Impermeable Layer – in areas not covered in hardstand, the materials subject to containment will be required to be covered with a GCL layer with a hydraulic conductivity of less than 5 x 10^{-11} m/s. The GCL layer is required to be installed in accordance with the manufacturer's instructions with appropriate overlay of 150-300 mm between joints of the GCL. Care should be taken to ensure that there are no cuts/abrasions during installation of the GCL – however it is noted that the product is self-healing and minor cuts/openings will appropriately ameliorate. In addition, Bentofix does not require to be kept moist during installation and/or maintenance.
- Marker Layer – above the impermeable GCL layer, a single bright orange orange geotextile, such as "Bidim" or similar geotextile, is to be installed (as per Section 5.1) prior to placement of the capping layer as per **Section 5.1**.
- Capping Layer - A minimum 1.0 m (after compaction) capping layer of soil is required to manage access to impacted soils subject to containment. Material imported to site for use as a capping layer will be required to be environmentally suitable material for human and/or ecological exposure (as appropriate) as per **Section 5.1**.

5.3 Soils Underlying Transformers (AEC3)

The remediation methodology (if required) for potentially impacted soils underlying the transformer in the south-eastern portion will be dependent upon the nature and extent of soil impacts identified following decommissioning and removal of the transformer. The preferred remediation approach

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

will require consideration to the remedial options presented in the RAP (JBS&G 2019a) and further require approval by the Site Auditor prior to implementation.

5.4 Materials Management Principles

As part of site remediation/construction works it is anticipated that excavated material required to be removed from the site during construction/remediation works will fall into one of a number of categories, comprising material:

- Required to be removed from the site as a result of contaminant characteristics identified as presenting an unacceptable risk to human health or the environment (source material assessed as unsuitable for on-site containment) under the proposed development. Such material is characterised as having contaminant characteristics that present an unacceptable risk to future receptors under the proposed land-use and so will require disposal to a lawful waste facility.

  Material identified as requiring removal from the site must be disposed of off-site to a facility lawfully able to receive it. Materials shall be classified in accordance with NSW EPA Waste Classification Guidelines (EPA 2014) requirements or an appropriate exemption as created under the *Protection of the Environment Operations (Waste) Regulation 2015*.

  Details of completed additional assessment activities including material characterisation reports will be included in the final validation documentation to be prepared in accordance with the requirements of the RAP JBS&G (2019a). Records associated with material tracking, including trucking receipts, landfill disposal records, etc will also be reviewed to ensure material removed from the site can be accounted for and has been disposed of lawfully.

  or

- Required to be removed to achieve site development objectives which will most likely comprise surplus materials excavated to allow for the construction of underground utilities, water features, deep garden beds etc. To facilitate construction works to proceed in accordance with ecologically sustainable development (ESD) principles and minimise waste materials resulting from the development, the following excavation management principles are required to be implemented:
  - Following the successful excavation and validation of all impacted materials assessed as requiring on-site containment any residual fill materials within the area to be excavated to accommodate future services etc, will be scraped and stockpiled;
  - The underlying natural soils will then be inspected by the environmental consultant in order to assess if the materials are consistent with the definition of VENM as defined by the *Protection of the Environmental Operations Act 1997* (POEO Act);
  - Should the soils be assessed as consistent with VENM, the materials will be preferentially excavated and recycled off-site for beneficial re-use; and
  - VENM materials will be over-excavated to form the containment cell (or appropriate alternative location) to accommodate the balance of fill materials that were excavated and stockpiled separately.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

6. Validation Plan

The validation of remedial works will be conducted by the environmental consultant to demonstrate that the remediation objectives have been achieved in accordance with Section 8 of the RAP (JBS&G 2019a).

6.1 Validation Sampling and Analysis

6.1.1 Potential Impacted Fill Soils (AEC4)

The validation approach adopted for asbestos and other potential COPCs within fill materials will be dependent upon the type of impacts encountered on-site and the adopted remediation approach to manage the impacts. The validation approach will need to be approved by the site Auditor prior to implementation. However, it is noted that the validation procedure for on-site containment of materials is provided in **Section 6.1.4**.

6.1.2 Chlorinated Ethene Impacted Soils (AEC1)

Validation of Excavations

The inferred remedial excavation extent with respect to chlorinated ethene impacts is shown on **Figure 3**. However, the final extent will be informed by field screening of soil vapour levels within the excavations. The methodology will be undertaken with consideration to the guidance on vapour sampling methods outlined in CRCCARE (2013[4]), the requirements of the RAP (JBS&G 2019a) and data collected during remediation works to demonstrate the reliability of the method.

For sub-soil vapour sampling, the following methodology will be applied:

- Boreholes will be advanced via hand auger or drill rig at the nominated locations. 6 mm nylon tubing with a stainless steel tip will be installed to the depth of the borehole, which will then be backfilled with graded sand adjoining the base of the sample tube, overlain by a nominal thickness of powdered bentonite, and backfilled with grout/bentonite chips to create an air-tight seal at the surface.
- Soil vapour probes will be installed to a depth of 1 m within the walls or base of the excavation via driving a star picket with a metal tube attached (or similar device/probe as appropriate for sampling vapours) from within the excavation;
- A multi-gas meter will then be used to purge each probe for a period of at least 30 s. Gas readings will be monitored until oxygen and PID readings stabilise;
- Following this a leak detection evaluation will be completed via placement of an isopropyl alcohol-soaked rag over the top of the backfilled borehole to assess the potential occurrence of leaks whilst the gas detector is purging the sample point. Elevated PID readings on the gas detector will indicate a leaking probe. Any leaking probes will be required to be reinstalled and re-checked prior to sampling using the same method;
- Installed probes shall be left to equilibrate (30 minutes for spear point or similar probes and 24 hours for soil vapour wells, in accordance with NEPC (2013) requirements) and then soil-vapour samples extracted. Extracted soil vapour samples may be analysed in field via gas-chromatography (using FROG 4000 or similar) and determination of acceptability will be based on subsequent analysis of soil and soil-vapour samples.
- Should the results of field screening provide a preliminary indication of a lack of residual impacts – then carbon tube samples will be submitted for confirmatory laboratory analysis;

[4] *Field assessment of vapours*, CRC CARE Technical Report no. 13, CRC for Contamination Assessment and Remediation of the Environment, Adelaide, Australia.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Carbon tube samples will be collected via attaching a calibrated low-flow pump (<0.2 L/min) to the carbon tube using additional section of 6mm Teflon tubing as required;
- Withdraw sufficient soil gas over the carbon tube to ensure required detection limits are met for relevant COPCs and submit tubes for VOC 8260 analysis.

The final sampling density will be consistent with Section 8.2.6.1 of the RAP (JBS&G 2019a) and comprises:

- 1 soil vapour probe per 10 m of excavation wall, with a minimum of one per wall; and
- 1 soil vapour probe per 100 m^2 of excavation base, with a minimum of one per excavation.

In addition, soil samples will be collected from the walls of excavations formed by the removal of impacted soils at a frequency of one sampler per 5 m of excavation wall, with a minimum of one per wall and 1 per 25 m^2 from the base of the excavation, with a minimum of four samples.

Soil and soil-vapour validation will be analysed for concentrations of TRHs and VOCs. Soil samples will be reviewed to identify whether any soil-bound chlorinated ethenes are present at laboratory detection limits. If soil-bound CEs are present, leachate samples must be prepared and analysed for CE concentrations to determine assess the potential for leachate generation. Soil-vapour samples will be compared against site validation criteria (i.e. NEPM 2013 HIL-C, Section 8.7 of JBS&G (2020)) and soil leachate generation compared against groundwater validation criteria (i.e. ANZG (August 2018[5]).

Validation of Suitability for On-site Containment

Noting that the final location for the containment cell of CE impacted soils will be at least 30 m away from current/future structures that will preclude the potential for vapour intrusion – the only assessment required to validate suitability for on-site retention (of excavated and impacted CE soils) will comprise an assessment of leachability of the materials (and therefore on-going risks to groundwater). As such, one soil sample will be collected from each unique 70 m^3 stockpile and submitted for Australian Standard Leaching Procedure (ASLP) VOC analysis at a NATA registered laboratory. The validation criteria will be sourced from values provided to ANZG (August 2018) for fresh water ecosystems protective of 95% of species.

6.1.3 Soils Underlying Transformers (AEC3)

The validation approach adopted for soils underlying the transformer will be dependent upon the type of contamination encountered on-site and the adopted remediation approach to manage the impacts. The validation approach will need to be approved by the site Auditor prior to implementation.

6.1.4 Validation of Soil Containment

The area of the containment cell (for asbestos and/or CE impacted soils) will be required to be surveyed by a Registered Surveyor and will be subject to placement of a barrier layer (that comprises a GCL layer for CE impacted soils and a marker and capping layers for all impacted soils that are not covered in hardstand) to prevent unforeseen access to impacted soils. Therefore, the areas subject to on-site containment will require the following validation information as prepared by a Registered Surveyor:

- A location plan of the placed materials with co-ordinates based on an agreed grid system (e.g., GPS or relative to the lot boundaries);

[5] Australian and New Zealand Guidelines for Fresh and Marine Water Quality (ANZG, August 2018)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- The levels in m AHD of the base of the placement location(s) prior to the material placement;
- The levels in m AHD of the placement locations once all materials have been placed;
- Daily inspections by the environmental consultant to record when and where the GCL and marker layer has been installed;
- The levels in m AHD of the finished barrier layer surface; and
- Subsequently the total placed volume of materials.

The survey information shall be used to document the thickness of the barrier layer across the site. In addition, the survey is required to detail the lateral extent of the site area.

In addition, the environmental consultant will be required to visually inspect the installation of the GCL and marker layers and provide photographic evidence that it was appropriately installed for inclusion in the validation report.

A long term environmental plan (LTEMP, refer to **Section 6.3**) will be prepared documenting the presence of the impacted material and the management measures required to ensure the long term protection of human health and the environment. Appropriate notation on planning certificate and/or title will be made, documenting the presence of the LTEMP and impacted materials.

6.2 Validation Reporting

At the completion of the remedial works, a validation report will be prepared in general accordance with the *Guidelines for Consultants Reporting on Contaminated Sites* (OEH 2011), documenting the works as completed. The report will contain information including:

- Update relevant portions of the site description and CSM as prepared in this RWP to the condition of the validation assessment footprint at the time of the validation assessment;
- Present all sampling field notes and laboratory data including calibration certificates for field monitoring equipment, environmental monitoring etc.;
- Undertake an assessment of QA/QC of analytical data generated by the works and identify data that is reliable for use in characterising the site;
- Sort data into data sets as required by the decision rules;
- Assess whether sufficient data has been obtained to meet required limits on decision error;
- Undertake assessment to the decision rules;
- Provide a summary of waste disposal/off-site removal activities and volumes of material removed from the site including supply of all waste disposal dockets confirming final waste disposal/landfill destination;
- Provide a summary of material imported to site for remediation including material source, type, assessment of suitability, approximate quantities, date of importation and final placement location;
- Details of the remediation works conducted;
- Information demonstrating that the objectives of the RAP (JBS&G 2019a) and this RWP have been achieved, in particular the validation sample results and assessment of the data against both the pre-defined data quality objectives and the remediation acceptance (validation) criteria;
- Survey information as related to the site boundaries as well as areas subject to on-site containment etc (**Section 6.1.4**);

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Information demonstrating compliance with appropriate regulations and guidelines;
- Document any variations to the strategy undertaken during the implementation of the remedial works;
- Details of any environmental incidents occurring during the course of the remedial works and the actions undertaken in response to these incidents;
- Other information as appropriate, including requirements (if any) for ongoing monitoring / management; and
- Provide a comment on the suitability of the site for the proposed use and requirements for any ongoing monitoring/management (where applicable).

The report will serve to document the remediation works for future reference.

6.3 Long Term Environmental Management Plan

At the conclusion of remediation/validation works, a LTEMP will be prepared according to the requirements outlined NSW EPA *Guidelines for the NSW Site Auditor Scheme (3rd edition)* (NSW EPA 2017) to detail the required measures to ensure the continued suitability of the site for its proposed use. The LTEMP shall contain the following elements (as appropriate) as based on the extent of data that will be available at the cessation and validation of remediation works:

- A statement of the objectives of the LTEMP – i.e. to ensure continued suitability of the site after it has been remediated;
- Identification of residual environmental contamination issues at the site that require ongoing management/monitoring to meet the LTEMP objectives, including the type of contamination and location within the site (including survey plans). This should further include characterisation of the material in-situ on the site as consistent with the extent of validation data proposed to be collected;
- Documentation of environmental management measures which have been implemented to address the identified environmental issues at the site;
- Description of management controls to limit the exposure of site users to known areas of contamination to acceptable levels;
- Description of responsibilities for implementing various elements of the provisions contained in the LTEMP;
- Timeframes for implementing the various control/monitoring elements outlined in the LTEMP;
- Environmental monitoring and reporting requirements (if required) for the future management of environmental impact underlying the site including:
    - Appropriate monitoring locations and depth within and down-gradient of any residual contamination;
    - Relevant assessment criteria to be used in evaluating monitoring results;
    - Frequency of monitoring and reporting;
    - Process for reviewing monitoring data and how decisions will be made regarding the ongoing management strategy;
    - The length of time for which monitoring is expected to continue;
    - The regulatory authorities involved and the management inputs required from each;

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- The integration of environmental management and monitoring measures for groundwater;

- Health and safety requirements for particular activities;
- A program of review and audits;
- The provisions in the LTEMP are feasible (i.e., able to be implemented) and able to be legally enforceable (i.e., a mechanism exists, such as development consent conditions, to give the plan a basis in law);
- The relevant consent authority is satisfied that the inclusion of a development consent condition relating to the implementation of the LTEMP is acceptable; and
- Corrective action procedures to be implemented where LTEMP assessment criteria are breached.

The LTEMP will be provided to the appointed site auditor for review and approval prior to preparation of the final site audit statement and accompanying site audit report for the site.

Version: 1, Version Date: 14/04/2021

7. Conclusion

The RWP presented herein is a concise work plan describing the contaminated soil remediation/management requirements during site redevelopment. It is intended to present the required remedial works in an accessible form such that contractors can readily scope and conduct the required works. However, it should be read in conjunction with the existing RAP (JBS&G 2018a), which documents in detail required environmental monitoring and validation requirements. It is considered that if all the procedures are sufficiently followed in conjunction with the RAP, the site can be made suitable for the proposed development.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

8. Limitations

This report has been prepared for use by the client who has commissioned the works in accordance with the project brief only, and has been based in part on information obtained from the client and other parties.

The advice herein relates only to this project and all results conclusions and recommendations made should be reviewed by a competent person with experience in environmental investigations, before being used for any other purpose.

JBS&G accepts no liability for use or interpretation by any person or body other than the client who commissioned the works. This report should not be reproduced without prior approval by the client, or amended in any way without prior approval by JBS&G, and should not be relied upon by other parties, who should make their own enquiries.

Sampling and chemical analysis of environmental media is based on appropriate guidance documents made and approved by the relevant regulatory authorities. Conclusions arising from the review and assessment of environmental data are based on the sampling and analysis considered appropriate based on the regulatory requirements.

Limited sampling and laboratory analyses were undertaken as part of the investigations undertaken, as described herein. Ground conditions between sampling locations and media may vary, and this should be considered when extrapolating between sampling points. Chemical analytes are based on the information detailed in the site history. Further chemicals or categories of chemicals may exist at the site, which were not identified in the site history and which may not be expected at the site.

Changes to the subsurface conditions may occur subsequent to the investigations described herein, through natural processes or through the intentional or accidental addition of contaminants. The conclusions and recommendations reached in this report are based on the information obtained at the time of the investigations.

This report does not provide a complete assessment of the environmental status of the site, and it is limited to the scope defined herein. Should information become available regarding conditions at the site including previously unknown sources of contamination, JBS&G reserves the right to review the report in the context of the additional information.

Global Synthetics

TECHNICAL INFORMATION

Bentofix®

Geosynthetic Clay Liners for Landfills

From the inventors of needle punched thermally locked Geosynthetic Clay Liners and now polyethylene coated GCL with options for coating thickness and coating texture. The polyethylene is extrusion applied to form an intimate bond with the Bentofix® GCL substrate.

This innovative development reduces the risk of desiccation, cation exchange, gas emission and potential bentonite erosion loss issues of many competitor GCL that use glue applied, thin film sheet membranes that attempt to address these issues.

Bentofix® continues to develop technological advantages for your industry.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

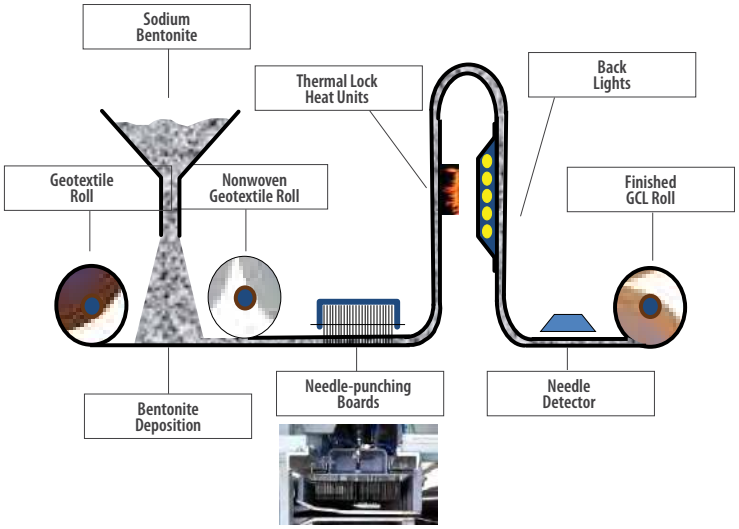
Historical Perspective of **Bentofix®** in Australia

Bentofix® GCL has been successfully installed throughout Australia for over a decade. Millions of square metres of Bentofix® product continues to effectively contain potentially hazardous wastes across Australia.

Bentofix® is a shear strength transmitting geosynthetic clay liner. The product consists of a high quality sodium bentonite powder encapsulated between an upper and lower layer of geotextile. The **Bentofix®** products are continuously needle punched through all components and then will be subject to some controlled heat treatment such that the fibres are effectively "thermally locked" in place to obtain high long term shear strength.

The Original Invention

Manufacturing Schematic – Needle-punched GCL



Innovation of the **Bentofix®** Product

Recent product innovation has led to a unique coated product which combines all the proven benefits of the **Bentofix®** GCL with a speciality polyethylene extruded coating directly applied during the manufacturing process. These products are known as **Bentofix®** X2 NSP4900 and X5F NSP4900.

Polyethylene has a remarkable and proven history of high resistance to chemical attack from many leachates found in landfill applications.
Additional product features include a range of applied coating thicknesses ensuring extremely low hydraulic conductivities. A unique optional texturing pattern ensures high interface friction values that assist in overcoming potential instability issues of the GCL on steep slopes.

Additional benefits include the ability to reduce cover to landfill caps by overcoming desiccation issues, provide a positive gas barrier layer and extend the range of sealing applications in a wide range of soil types. Additional supporting information is available from Global Synthetics.

The Latest Innovation

Manufacturing Schematic – Needle-punched GCL with Additional Polyethylene Coating

Bentofix® GCL Specification

Bentofix® Sodium Bentonite Properties

Bentofix® Geosynthetic Clay Liners contain a sodium bentonite powder that is processed to exceed all requirements of local Australian and International standards for bentonite quality. The use of a powdered sodium bentonite ensures positive hydration and hence compliant sealing properties.

PROPERTY	TEST METHOD	UNITS	VALUE
Bentonite Particle Size	Dry Screen[1]	% passing 75 microns	≥ 80
Swell Index	ASTM D5890[2]	mL/2g	≥ 24
Fluid Loss	ASTM D5891[3]	mL	≤ 18
Montmorillonite Content of Bulk Sample	XRD Quantitative Mineralogy Analysis[4]	% Bulk Sample	≥70
Montmorillonite Content of Bulk Sample - Methylene Blue	VDP69 (Methylene Blue)[5]	mg/g	≥ 300
Calcium Carbonate Content ($CaCO_3$)	XRD Quantitative Mineralogy Analysis[6]	% Bulk Sample	≤ 2
Polymer Additive	Manufacturers Statement Nil Polymer Additives[7]	Nil Additive	Manufacturers Statement Nil Polymer Additives
Cation Exchange Capacity	Methylene Blue	c mol/kg or meq/100g	≥ 70

Test Method Explanation

Note 1- Bentonite Particle Size

Particle size provides an indication of the reactive surfaces. Smaller particle sizes generally react more efficiently and effectively with water to result in better swelling, lower fluid loss, higher swelling pressure, greater gel strength and lower permeability.

Note 2- Swell Index

This is an index test that evaluates the swelling potential of the bentonite component of a GCL. The index relates to bulk swelling under minimal confinement. The swell index is generally inversely proportional to GCL permeability. Generally the higher the swell index the lower the GCL permeability.

Note 3- Fluid Loss

This is an index test that evaluates the fluid loss properties of the bentonite component of the GCL under standard conditions of pressure over specified intervals of time. A low fluid loss value is indicative of the ability of the bentonite to restrict movement of liquid under load. A low fluid loss value is related to GCL permeability. The lower the fluid loss value the lower the GCL permeability.

Notes 4 & 5- Montmorillonite Content

Both methods of either X Ray Diffraction (XRD) or by Methylene Blue titration quantify the mineralogy of the bentonite. The montmorillonite content can be expressed as a percentage of the bulk sample or as a size fractionated percentage such as less than 0.5 microns. Good agreement is obtained between chemical analysis of bentonite using method VDP69 and XRD methods of deriving montmorillonite content. The higher the montmorillonite content the better the performance of the GCL.

Note 6- Calcium Carbonate Content

Generally the calcium content must be kept to minimal levels as calcium montmorillonite has a much lower swelling potential than sodium montmorillonite. The presence of calcium can be determined by XRD methods and performed on a size fractionated percentage of the bentonite (≤ 0.5 micron fraction).

Note 7- Polymer Modified Bentonite Powder

The addition of chemical modification of the bentonite powder, with polymers, will generally give higher swell index values and lower fluid loss numbers. Both these test methods are short term tests with little documentation on the long term performance of these altered powders. Both local and International Specification documents for the use of GCL either do not allow their use or warn strongly against use unless the manufacturer can fully substantiate long term performance of the candidate GCL.

In all instances, the use of polymer modification must be fully disclosed by the manufacturer.

Bentofix® GCL Specification

Bentofix® GCL Properties & available grades

Grade NSP4900

Bentofix® NSP4900 is a shear strength transmitting geosynthetic clay liner, continuously needle punched through all components. The upper layer is a polypropylene non-woven geotextile and the carrier layer (bottom) is a polypropylene woven geotextile. Unique to this product, the fibres are "thermally locked" to ensure high long term shear strength. The use of high quality sodium bentonite powder ensures a low permeability containment product ideally suited to applications of landfill containment. Additional edge impregnation of bentonite powder is placed 500mm wide along both longitudinal edges of the roll in the cover layer. A 300mm edge overlap line is placed on the carrier side of the GCL.

Grade X2 NSP4900

X= Coated
2= Polyethylene 200 gsm Coating (0.2mm nominal thickness)

Bentofix® X2 NSP4900 is a shear strength transmitting geosynthetic clay liner, continuously needle punched through all components. The upper layer is a polypropylene non-woven geotextile and the carrier layer (bottom) is a polypropylene woven geotextile. Following on from the needling process a liquid polyethylene coating of 0.2mm thickness is applied to the entire surface of the woven side of the GCL. Polyethylene has excellent resistance to many leachates found in landfills. This coating is in direct and intimate contact with the GCL with excellent bond characteristics.

The use of high quality sodium bentonite powder ensures a low permeability containment product ideally suited to applications of landfill containment. Additional edge impregnation of bentonite powder is placed 500mm wide along both longitudinal edges of the roll in the cover layer. A 300mm edge overlap line is placed on the coated side of the GCL.

The innovative use of a composite GCL/polyethylene coating ensures extremely low permeabilities less than $1x\ 10^{-14}$ m/sec and meets the requirements of GRI specifications for coated GCL's.

Grade X5F NSP4900

X= Coated
5= Polyethylene 500gsm Coating (0.5mm nominal thickness)
F= textured frictional surface.

Bentofix® X5F NSP4900 is a shear strength transmitting geosynthetic clay liner, continuously needle punched through all components. The upper layer is a polypropylene non-woven geotextile and the carrier layer (bottom) is a polypropylene woven geotextile. Following on from the needling process a liquid polyethylene coating of 0.5mm thickness is applied to the entire surface of the woven side of the GCL. Polyethylene has excellent resistance to many leachates found in landfills. This coating is in direct and intimate contact with the GCL with excellent bond characteristics.

The use of high quality sodium bentonite powder ensures a low permeability containment product ideally suited to applications of landfill containment. Additional edge impregnation of bentonite powder is placed 500mm wide along both longitudinal edges of the roll in the cover layer. A 300mm edge overlap line is placed on the coated side of the GCL. The innovative use of a composite GCL/polymer coating ensures extremely low permeabilities less than $1 x\ 10^{-14}$ m/sec and meets the requirements of GRI specifications for coated GCL's.

Additionally a highly textured surface is provided to increase interface shear of this GCL.

Bentofix® GCL Typical Guide for Landfill Applications

Bentofix® Application	**Bentofix®** Grade		
	Bentofix® NSP4900	Bentofix® X2 NSP4900	Bentofix® X5F NSP4900
Base lining			
Flat or shallow slope	✔	O	O

Capping			
Flat or shallow slope	O	✔	O
Slopes > 1V:2H	O	–	✔
Liquid/leachate Containment	–	✔	O

✔ Suggested product grade – Further analysis required O Optional product grade

Product Selection Notes and Limitations

(1) Where there is the risk of Ion exchange from the subgrade, high salinity in the ground water, a harsh leachate, or potential for desiccation beneath a wrinkled geomembrane, possible bentonite erosion on slopes, or when the GCL is used in contact with geonet; then a coated GCL (Bentofix® X2 or X5F) is suggested for use to minimise these risks.

(2) Bentofix® coated GCLs may be used alone as a single liner for a landfill cap. The coating protects the GCL against possible desiccation, internal erosion, Ion exchange and root penetration, and provides an instant gas barrier.

(3) The cover soil thickness can be reduced by up to 50% when a Bentofix® coated GCL (X2 or X5F) is used as a single liner for a landfill cap.

(4) The slope angles indicated are typical only and should be verified with appropriate testing using specific site soils. Other influences may be the use of other complimentary geosynthetics such as HDPE liner and Geonets in

Our commitment to Quality

NAUE does not chemically modify the sodium bentonite that is used in any of our **Bentofix®** GCL's ensuring the owner, operator and landfill designer of secure containment for the life of the landfill.

Bentofix® GCL s are rigorously tested from raw material supply right through the production process to the finished product.
Bentofix® GCLs are produced under certified ISO9001 Quality processes. All in-house laboratories are fully accredited by National Testing Associations to ensure that test standards are maintained at the highest levels. State of the art test equipment is used to ensure repeatable quality product is produced and that our specification values are achieved. We use the highest quality bentonite and do not chemically alter our bentonites with polymers to achieve our stated specifications and those recognised by statutory regulators around the world.

The following extracts clearly state the precautions of using polymer modification of the bentonite powder in GCLs for landfill containment applications. All precautions are from current best practice guidelines;

EPA VICTORIA

Best Practice Environmental Management (BPEM) Publication 788.2, 2014 – page 93: Appendix E2.1.1.2 – Bentonite Form;

"… other additives, such as polymers or pH modifiers, may be added to improve the swelling and sealing capability of sodium-activated bentonites. However, the nature and suitability of these additives is difficult to check. If used, the manufacturer should provide their details and demonstrate their nature, suitability and long-term durability"

THE GEOSYNTHETIC RESEARCH INSTITUTE (GRI) - USA

GRI-GCL5, 2013 – page 23: Clause 11.7 - Design Considerations for Geosynthetic Clay Liners (GCLs) in Various Applications;

"… It should be noted that there is presently (2011) several ongoing research efforts in modifying both sodium and calcium bentonites, primarily (but not exclusively) with polymer additives. The goals of these efforts are to reduce cation exchange. Of course, the long-term performance of these polymers needs to be addressed, as well as the environmental impact. If polymers are added they should be noted in the product data sheets."

ENVIRONMENT AGENCY (EA) - UK

EA Publication: Using Geosynthetic Clay Liners in Landfill Engineering, ver.3 – page 5: Clause 2.4

"… Some GCL manufacturers use additives to enhance certain characteristics such as initial swell and leachate resistance in reinforced GCLs, or in the form of glues in unreinforced liners. The nature and suitability of these additives is difficult to ascertain. As a result we would prefer they were not used unless the manufacturer is able to demonstrate their nature, suitability, and long term durability. Manufacturers must provide details of all additives used in the manufacture of their GCLs. Where the additive is a polymer, you must ascertain the manufacturer has not used excess polymer during the manufacture of the GCL. Excess polymer can cause excessive swelling of the clay/polymer filling in needle punched GCLs pushing the geotextiles apart, and allowing bentonite migration and subsequently loss of integrity."

1. Introduction

1.1 Introduction and Background

JBS&G Australia Pty Ltd (JBS&G) has been engaged by Penrith City Council (Penrith, the client) to provide environmental consultancy services associated with the proposed redevelopment of the Penrith City Village Park (PCPV, the site) (**Figure 1**). The site comprises ten (10) legal properties over an approximate area of 1.87 hectares (ha) bound by Station Street, Henry Street, Allen Place and Woodriff Street North, as shown on **Figure 1** and **Figure 2**. The address and legal identification of each property are provided in **Table 3.1**.

The site is currently zoned 'Commercial Core (B3)' and 'Public Recreation (RE1)' (Penrith 2010[1]) and is proposed to be developed for mixed uses including recreational areas and 4 to 6 storey residential apartments with ground floor retail/commercial uses and potential multi-level basements. As part of the rezoning process for the site council requires (in accordance with SEPP55) that it is demonstrated that the site is suitable (or can be made suitable) for the proposed land use.

To facilitate feasibility planning and costing, Council has engaged JBS&G to provide an overarching Remedial Action Plan (RAP), as documented herein. Upon development of detailed design plans, and establishment of project staging, detailed Remedial Works Plans (RWPs) can be prepared to facilitate staged remediation of the site. This RAP is for remediation of the PCPV site redevelopment. Should contamination present in offsite areas require remediation this will be subject to separate RAPs/RWPs.

The site has historically been used for a combination of residential and commercial land uses, including dry-cleaning and retail fuel dispensing, followed more recently by light commercial land uses (retail shops, restaurants, health/wellness services, tutoring services and a funeral parlour). Contamination investigations conducted at the site (Geo-Logix 2016[2], JBS&G 2017[3], JBS&G 2019a[4] and JBS&G (2019b[5]) have identified the presence of elevated volatile organic compounds (VOC) within site media surrounding the former dry-cleaner.

The RAP identifies strategies and remedial options to address the identified environmental impact and render the site suitable for the proposed land use. This RAP has been prepared with reference to relevant Australian Standards and guidelines made or approved by the NSW EPA.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

1.2 Objective

The objectives of this RAP are to:

- Provide a summary of historical site assessments and present a conceptual site model (CSM) documenting the known extent of environmental impact at the site and key exposure pathways associated with the proposed development;
- Identify outstanding potential contamination issues which require further assessment prior to the development and implementation of detailed site-specific RWPs;
- Identify the remedial strategy(ies) to be adopted by an assessment of remedial options considering the proposed land use; and
- Document the procedures and standards to be followed in order to remove the risks posed by contaminated soils, soil vapour and groundwater to make the site suitable for the proposed development, while ensuring the protection of human health and the surrounding environment.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

2. Proposed Development Concept

2.1 Background

Council has indicated that the site is to be redeveloped into a mixture of public open spaces, and six storey structures comprising a mixture of retail, restaurant, services, entertainment and cultural spaces. The PCPV area is intended to be highly accessible and includes internal shared paths/roads and pedestrian laneways. Preliminary conceptual plans (**Appendix A**) show the current and proposed land uses, the layout of new green spaces, development sites, laneways and pedestrian arcades.

The PCPV provides a range of open spaces including parks and facilities offering places for relaxation, recreation and opportunities for community interaction. The conceptual site layout is shown on **Figure 2**. Council envisages that the western site portion is to be redeveloped into a contemporary public space which creates a focal point for the City Centre and fosters social and economic growth. The balance of the site will comprise development sites to be utilised for residential apartments, laneways, minor green spaces and pedestrian arcades.

2.2 Building Development Area

Preliminary design plans (**Appendix A**) include a mixture of recreational use and 4 to 6 storey residential apartments within the building development area, occupying approximately 11 200 m^2 of the site (**Figure 2**). It is anticipated that bulk excavation to form basements may be required within this portion of the site. The basement is anticipated to occupy a footprint between 13 000 m^2 and 19 000 m^2 and comprise two basement levels. Future landscaped areas (paved extents and/or establishment of flora) within this portion of the site will likely be limited to shallow plantings within constructed garden beds. Laneways and shared paths within the building development area are anticipated to comprise a mixture of concrete, asphaltic and paved hardstands.

2.3 Penrith City Park

Review of the design plans indicate that the Penrith City Park component of the site will comprise a large (approximately 7500 m^2) open recreational space. The park is envisaged to comprise a mixture of paved and grassed areas including shallow/deep planted gardens and potentially raised garden boxes.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3. Site Condition and Surrounding Environment

3.1 Site Identification

The site location is shown on **Figure 1**. The extent of the site and associated cadastral boundaries are shown on **Figure 2**. The site details are summarised in **Table 3.1** and described in detail in the following sections.

Table 3.1 Summary Site Details

Property Identification and Street Addresses	The site is comprised of the following legal properties: • Lot 1 in DP 545587 – 114 to 116 Henry Street • Lot 1 in DP113118 – 118 to 120 Henry Street • Lot 1 in DP 254763 – Henry Street • Lot 1 in DP 164798 – 134 to 138 Henry Street • Lot 10 and 11 in DP 553665 – 142 Henry Street • Lot 2 in DP 556075 – 144 Henry Street • Lot 3 in DP1200790 – 42 to 44 Station Street • Lot 1 in DP 526304 – 48 to 50 Station Street • Lot E in DP 163176 – 46 Station Street In addition, the site area includes the Allen Place Car Park, Gaymark Lane and Allen Place.
Local Government Authority	Penrith City Council
Approximate MGA Coordinates (MGA 56)	As shown on **Figure 2**
Site Zoning	Commercial Core (B3) and Public Recreation (RE1), Penrith (2010)
Current Use	Commercial (car parking, retail, restaurant and services)
Previous Use	Commercial/industrial (car parking, dry cleaning, petroleum dispensing and general retail/services) and residential
Proposed Use	High density residential, public open space and commercial
Site Area	Approximately 1.87 ha

3.2 Site Description

The site was inspected by Rohan Hammond on 3 May 2018.

The site is an irregularly shaped, large commercial precinct bound by the Allen Place loop, Henry Street, Station Street and 98-100 Henry Street. The site area includes the Allen Place car park and ten commercial premises on the southern side of Henry Street in Penrith. The borders of the site were not secured and open to the public (pedestrians and vehicles). The site was utilised for a range of commercial operations at the time of the site investigation including a car park, retail shops and cafes. High pedestrian and vehicular traffic was observed during working hours. All commercial premises at the site were noted to be occupied.

The site generally sloped downward from east to west, with a slight ridge line observed to dissect the centre of the car park. Inspection of site surfaces and comparisons with the surrounding landscape indicated that significant topographical alterations had not occurred.

Approximately 95 % of the ground surfaces were sealed as asphaltic pavement, concrete pathways, and building footprints with onsite drainage channels directing surface water toward the municipal stormwater system. The balance of the site comprised unsealed grounds in the form of garden beds.

Buildings at the site did not exhibit significant indicators of dilapidation, although minor wear, consistent with the age of the buildings was observed. A detailed inspection/hazardous building materials survey of the existing site structures was not undertaken as part of this investigation.

No surface water was present at the site at the time of the investigation. No evidence of waste storage, except for commercial municipal waste bins, or storage tanks were observed at the site. No

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

olfactory indicators of volatile chemical usage, as described in the DSI, were encountered during the recent site inspection. No visual indicators of gross or widespread contamination were observed.

Four transformers were observed: one in the southwest and east corners of the site and two along the northern boundary of the Allen Place Car Park, which were on raised concrete platforms. No hydrocarbon staining was observed to be associated with the transformers. The location of the transformers is shown on **Figure 2.**

3.2.1 The Dry Cleaner, 134-138 Henry Street, Penrith

The former dry cleaner comprised the northern third of the building located at 134-138 Henry Street, Penrith. The shop-front occupied most of the building footprint (>85 %), with the remainder comprising a secluded water closet, storage space and point of sale. The premise was an operational scooter store, occupied by scooters, bikes, helmets and related paraphernalia.

The water closet comprised a small (<3 m^2), fully enclosed space which was serviced by two separate sewerage disposal points. Detergents, household solvents and soaps were observed to be stored within the water closet. The shop-front was serviced by an air exchange (air-conditioning) unit which was observed to be operational during each visit to the premises.

In the alleyway between The Dry Cleaner and Shop 3, numerous services were present. Sewerage infrastructure and stormwater pipes ran in a north to south orientation, connecting stormwater and sewerage pipes to the greater system, south of the premises. Services were noted to comprise a mixture of terracotta and polyvinyl chloride (PVC) pipes.

3.2.2 Shop 3, 140 Henry Street, Penrith

Shop 3 comprised the southern half of the building located at 140 Henry Street, Penrith. The shop was partitioned into four rooms and a water closet, joined by a central hallway. The premises housed an alternative health centre at the time of the investigation.

The shop-front rooms were serviced by air exchange units (air conditioners) which were observed to be in operation during each site visit. The water closet comprised a small (<5 m^2), fully enclosed space which was serviced by two separate sewerage disposal points.

An inspection of the property revealed the presence of household cleaning and medical products: limescale solvents, surface cleaners, stain removers, methylated spirits, polishes, pest control products, ethanol based surface wipes and carpet deodorizers.

3.3 Surrounding Land Use

The current land uses of adjacent properties or properties across adjacent roads are summarised below.

- North – The site is bound to the north by Henry Street and then numerous commercial premises including UFC Gym, Queens of Hearts Community Foundation and Nepean College. Further north is an open carpark and commercial premises on Belmore Street, including Bob Jane T-Marts and Veterinary Hospital;
- East – To the east of the site is Woodriff Street North, followed by commercial premises and Edwards Place carpark. Further east a Pathology Centre and testing laboratory are present;
- South – The is was bound to the south by Allen Place, following which are multiple commercial properties including cafes, a medical centre and pharmacy. Beyond High Street commercial premises are present; and
- West – The site is bound to the west by Station Street, then medium to high density commercial premises. Further to the west is Peach Tree Creek and eventually the Nepean River.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3.4 Topography

Review of topographic information obtained from the Spatial Information Exchange Viewer, LPI (2015[6]) regional topographic map indicated that the site surfaces have an elevation of approximately 30 m Australian Height Datum (AHD). The site generally slopes downwards to the west, towards the Nepean River.

Site inspection confirmed that the topography on site was not significantly altered from the natural alignment and sloped slightly downward toward the western boundary, Station Street. A local ridge line existed which dissected the Allen Place Car Park in an approximately west to east alignment, with site surfaces sloping downwards perpendicular to the ridge line.

3.5 Geology and Soils

Reference to the 1:100 000 Geological Series Sheet for Penrith, DMR (1991[7]) indicates that the site is underlain by Bringelly Shale of the Wianamatta Group originating from the Middle Triassic epoch. This unit is comprised of shale, carbonaceous claystone, claystone, laminite, fine to medium-grained lithic sandstone, rare coal and tuff. Bringelly Shale is underlain by Ashfield Shale and, at depth, Hawkesbury Sandstone.

Reference to the 1:100 000 Soil Landscape Series Sheet for Penrith, DMR (1990[8]) indicates that the site is within the Richmond Soil Landscape group. This group of landscape is characterised by quaternary terraces of the Nepean and Georges Rivers. Relatively flat (slopes <1 %) and level. Splays, levees provide local relief of <3 m. Formerly a low open woodland. Richmond soils are poorly structured orange to red clay loams, clays and sands. Texture may increase with depth. Ironstone nodules may be present. Plastic clays in drainage lines, red earths and red podzolic soils occur on terrace surfaces with earthy sands on terrace edges. Limitations of the Richmond group include high erosion hazard on terrace edges and minor localised flooding.

The lithology observed during previous investigations (PSM 2017[9], JBS&G 2017and 2018) is as follows:

- Shallow to moderately deep alluvial soils comprising clay to sandy clay (present from a depth of 0.4 m to 10.5 m below ground surface (bgs));
- Moderately deep to deep alluvial clay to sandy clay mixed with Nepean River gravels (present from a depth of 6.1 m to 13.0 m bgs); then
- Residual shale bedrock (present from a depth of 13.0 m to 15.0 m bgs).

3.6 Salinity

Reference to the Department of Infrastructure, Planning and Natural Resources salinity potential map GS912, DIPNR (2002[10]), has indicated that the site exists within an area of 'moderate salinity potential'.

Vegetation at the site during the site inspection did not exhibit any indicators of salinity related stress.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3.7 Hydrology

Rainfall is considered likely to migrate primarily through surface water runoff into the municipal stormwater system. Minor infiltration into the underlying porous soils and surface is also expected in areas of unsealed ground.

As discussed in **Section 3.2**, the site is largely covered by concrete, asphaltic pavements and building footprints. As such, surface water generated during periods of rainfall is anticipated to primarily enter the municipal stormwater system; via discharge into onsite stormwater catchment infrastructure or alternatively discharge into stormwater pits within the surrounding roadways.

The nearest water body to the Site is Peach Tree Creek, approximately 1.1 km to the west of the site boundary. Peach Tree Creek ultimately contributes to the Nepean River. Municipal stormwater discharges to the Nepean River.

3.8 Hydrogeology

Registered groundwater bore information was obtained from the NSW Department of Primary Industries groundwater mapping tools, NSW DPI (2016[11]). A review of the registered bore information indicated that there were thirteen bores within a 1.5 km radius of the Site. Based on the reported geology, topography and depth to groundwater, groundwater migration is expected to occur in a north-westerly direction, towards Peach Tree Creek approximately 1.2 km away. Groundwater has been reported in the surrounding properties within the river gravels layer. The DGI (JBS&G 2019a) reported groundwater depths ranging from 6.96 m to 8.05 m bgs, flowing in a north-westerly direction.

Registered groundwater bores located within a 1.5 km radius of the site are used for monitoring, recreational and testing purposes. Given the relatively dense urban use of the site and surrounding properties, in addition to the identified licensed bores, there is a moderate probability of additional undocumented bores near the site. No reported utilisation of groundwater as a drinking water source has been reported.

3.9 Acid Sulfate Soils

The Guidelines for the Use of Acid Sulfate Soil Risk Maps, Department of Land and Water Conservation (DLWC) (1997[12]), has indicated that acid sulfate soils (ASS) are likely to be located in coastal lowlands up to about 10 m AHD. No risk map for the area encompassing the site was provided as part of the acid sulfate soil risk map series, DLWC (1998). Review of the geographical and topographical location of the site has indicated that it is a significant distance away from tidal creeks or estuaries, and it is considered unlikely that ASS would exist at the site.

Three Section 149(2&5) planning certificates were obtained for the site, provided in the DSI (JBS&G 2017a). The land was not identified to have been affected by a policy adopted by Council or adopted by any other public authority, notified to Council, that restricts the development of the land because of the likelihood of ASS.

No staining, odours or other indicators of ASS were observed during the DSI or DGI (JBS&G 2017 and 2019a).

Version: 1, Version Date: 14/04/2021

3.10 Meteorology

A review of average climatic data for the nearest Bureau of Meteorology monitoring location (Penrith Lakes[13]) indicates the site is located within the following meteorological setting:

- Average minimum temperatures vary from 5.5 ^{o}C in July to 18.5 ^{o}C in January;
- Average maximum temperatures vary from 17.7 ^{o}C in July to 30.7 ^{o}C in January;
- The average annual rainfall is approximately 728.1 mm with rainfall greater than 1 mm occurring on an average of 71.7 days per year; and
- Monthly rainfall varies from 30.6 mm in September to 121.4 mm in June with the wettest periods occurring on average in January to June.

[13] http://www.bom.gov.au/climate/averages/tables/cw_067113.shtml, Commonwealth of Australia, 2013 Bureau of Meteorology, Product IDCJCM0028 prepared on 1 November 2016 and accessed by JBS&G on 8 November 2016

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4. Summary of Site History

The historical contamination assessments undertaken at the site (Geo-Logix 2016, JBS&G 2017 and 2018) presented a site history review based on the following information sources:

- Section 149(2&5) certificates obtained from council from three representative lots;
- Current and historical land title records;
- Records of stored Dangerous Goods held by WorkCover;
- Historical aerial photographs obtained from the Department of Lands;
- Publicly available heritage records held by the Department of Planning and Environment and Council, where readily available;
- Council Development Application / Building Application (DA/BA) records; and
- Records of environmental incidents, former environmental licences, or contaminated land notices or notifications, available from the EPA.

The site has been used for a range of residential and commercial purposes throughout the period to which records are available. Section 149 (2&5) certificates, historical land title records and aerial photographs indicate that the site comprised primarily low density residential premises from 1881 to 1949, following which it was progressively redeveloped into a commercial precinct.

The commercial precinct included mostly low-risk activities such as restaurants, retail and other services. Two premises were identified to have previously been used for activities with elevated potential to cause contamination of the land:

- Shop 3/134-138 Henry Street, Penrith – dry cleaning services (1977 – 2016); and
- 118-120 Henry Street, Penrith – garage proprietary services (1967 – 1973).

Historical assessments (Geo-Logix 2016, JBS&G 2017 and 2018) have identified contamination within the vicinity of the former dry cleaner (Shop 3/134-138 Henry Street). Following identification of contamination underlying and within the vicinity of the premises, Council notified the NSW EPA of contamination present at Shop 3/134-138 Henry Street.

Subsequently the EPA provided a response to Council (EPA 2018[14]) which made the determination that regulation of the chlorinated hydrocarbon impacts present at Shop 3/134-138 Henry Street under the *Contaminated Land Management Act 1997* was not currently required.

No items of aboriginal or European heritage were identified at the site.

5. Previous Investigations

The following provides a summary of the information and site characterisation data presented within key assessment reports. These reports include both historical and information relating to investigations conducted at that time.

Comments in relation to contaminants of potential concern (COPC) are provided in the following text in relation to assessment criteria adopted at the time of report preparation.

Sample locations completed during JBS&G (2017 and 2019a) are shown on **Figure 4A** to **4D**. Exceedances of assessment criteria specific to the sample location and to the future proposed land-use of the area are also shown on **Figure 4A** to **4D**. Historical sample results are compared against assessment criteria within **Table A(1), Table A(2), Table B, Table C** and **Table D.**

5.1 Preliminary Environmental Site Assessment Report, Geo-Logix (2016)

Council engaged Geo-Logix Pty Ltd (Geo-Logix) to conduct a preliminary ESA, Geo-Logix (2016) at the property located at 134-138 Henry Street, Penrith, NSW (the preliminary assessment area, Lot 1 DP164798, **Figure 2**). The preliminary assessment was undertaken to assess the potential for contamination to exist at the site given the presence of Shop 3/134-138 Henry Street within the preliminary assessment area.

The preliminary ESA indicated that the site appeared to be vacant until the 1950s. In the period intervening construction of the current building layout and its former vacant use, the site was used for storage of materials. The building layout as observed in the current investigation was constructed during the 1960s and the dry cleaner operated from 1977. Additionally, aerial photographs provided as part of the report indicated that a service station operated from the 1950s to the 1970s (The Service Station, Lot 1 DP113118, **Figure 2**) which was considered to potentially comprise an off-site contamination source for the preliminary assessment area (134-138 Henry Street). It is noted that the historical service station area forms part of the PCPV.

Geo-Logix carried out passive soil vapour assessments at two locations within the dry-cleaning shop. Chlorinated ethenes (CEs) PCE, TCE and DCE were detected in soil vapour samples at concentrations in exceedance of the commercial land-use criteria adopted for the assessment. Additionally, benzene, toluene, ethylbenzene and xylene (BTEX) compounds were detected within the soil vapour at concentrations above the laboratory limit of reporting (LOR) but below the commercial land use criteria. Geo-Logix did not identify onsite migration of contaminants from the former service station as a likely source for these BTEX compounds. The preliminary ESA report identified the presence of potential asbestos containing materials (ACM) forming part of the construction of building within the assessment area.

The site was notified to the EPA by Council following the works undertaken by Geo-Logix in accordance with the *Guidelines on the Duty to Report Contamination under the Contaminated Land Management Act 1997* (EPA 2015[15]).

5.2 Phase 2 Environmental Site Assessment, JBS&G (2017)

5.2.1 Introduction

JBS&G was engaged by Council to undertake a DSI at the site. The objective of the DSI was to determine potential for contamination based on current and historical site activities and to draw conclusions regarding the potential contamination status of the site for the proposed land-uses, or make recommendations to enable such conclusions to be made. Consideration was given to the

[15] *'Guidelines on the Duty to Report Contamination under the Contaminated Land Management Act 1997*'. NSW Environment Protection Authority, September 2015, EPA 2015;

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

potential for contamination to represent unacceptable risks to future site users based on future land uses proposed under the Central Park Village redevelopment.

The assessment comprised a review of Geo-Logix (2016), the site's environmental setting and historical site activities in conjunction with a field investigation. The field program included inspection, sampling and analysis of soil samples from 28 borehole locations, 3 groundwater samples from monitoring wells installed as part of the program and 10 soil vapour samples collected from sub-slab soil vapour probes. The sampling locations undertaken as part of the DSI, including exceedances of the relevant criteria are shown on **Figure 4A** to **4C**. JBS&G indicated that the presence of buildings and occupied tenancies during the investigation precluded detailed assessment of all site areas.

The site history assessment indicated that the site has been used for a combination of residential and commercial purposes over the period of available records. Historical land title records, obtained for three of the legal properties, indicated that the premises were owned for residential purposes, prior to light commercial use (retail, service station and funeral home facilities). The site was identified to have undergone numerous redevelopments comprising demolition of former structures. Geo-Logics (2016) was reviewed as part of the site history investigation, which indicated the former dry-cleaning operation was a potential source of contamination.

The desktop assessment identified a range of COPCs associated with the following AECs:

- The dry cleaner (Shop 3/134-138 Henry Street, **Figure 3**): improper disposal of dry cleaning chemicals resultant from the operation of the dry cleaner;
- The Service Station (118-120 Henry Street, **Figure 3**): improper management of petroleum hydrocarbons associated with the operation of the former service station;
- Whole of Site: impacts to potential imported fill materials and disturbed/reworked natural materials:
  - Fill materials of unknown origins observed to be present due to site development activities;
  - Pesticide and herbicide application associated with onsite residential maintenance activities within surficial-moderately deep fill and natural soils;
  - Fuel and oil spills associated with onsite residential maintenance activities; and
  - Hazardous building materials associated with existing and former site structures.

5.2.2 Results of the Assessment

Bore and groundwater installation logs are presented in **Appendix C**. The logs indicate that underlying hardstand pavements, fill materials were encountered to depths ranging from 0.2 m and 2.0 m bgs. Fill comprised a combination of silts and clays with varying sand content. Colours were observed to be primarily brown and grey with some orange/yellow clays also encountered. Anthropogenic inclusions were observed within fill material from some locations. Three distinct natural materials were encountered during the investigation: silty/sandy clay which exhibited increasing (although still minor <10 %) sand content with depth (0.2 m – 10.5 m bgs), Nepean River gravels (6.1 m – 13.0 m bgs) and shale bedrock (>11.7 m bgs). No ACM, odours or staining were observed on site surfaces or within the soil profile at any investigation location. No PID readings >1 ppm were reported during field screening for volatile organic compounds during soil sampling.

Sample results from the soil vapour sampling and analyses indicated that CE impacts are present within the vicinity of the dry cleaner. Volatile gas impact extends north of the dry cleaner, along the inferred groundwater flow direction, with exceedances of the soil vapour criteria for PCE and TCE identified from gas samples taken at probe locations SV05 and SV10 (**Figure 4C**). It is noted that the most significant concentrations were detected at location SV05, approximately in line with the

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

inferred groundwater flow direction, and that no exceedances of the site investigation criteria were reported east or south of the dry cleaner.

Contaminants in soils and groundwater were generally not present at concentrations statistically significant and exceeding the site assessment criteria, with the exception of the following:

- Concentrations of PCE (0.059 mg/L) and toluene (0.094 mg/L) in groundwater, collected from location PSM01, were present at concentrations exceeding the adopted drinking water criteria, which was considered to represent a potential unacceptable risk to future onsite receptors.

In addition to the above, exceedances of the laboratory LOR for TRHs were reported in groundwater samples from PSM01, PSM02 and PSM03, the source for which was unclear. The concentrations were not considered representative of a risk to future onsite/offsite receptors.

Groundwater and soil concentrations within the vicinity of the dry cleaner also indicated the presence of CEs, primarily PCE and TCE, albeit at concentrations which were below the adopted site assessment criteria. With respect to the position of the dry cleaner, the inferred groundwater flow direction and the sewer diagrams provided in **Appendix E**, the presence of elevated PCE and TCE within the groundwater sample from PSM01 indicates that CEs may have migrated along the sewerage infrastructure prior to their release into the environment.

5.3 Shop 3 Gaymark Lane, Penrith, NSW – Human Health Risk Assessment, JBS&G (2017b)

JBS&G was engaged by Council to provide an assessment of the potential human health risk to future commercial occupants of the building described as Shop 3 Gaymark Lane, as located in the southern portion of Shop 3/140 Henry Street.

The Human Health Risk Assessment (HHRA) was considered warranted based upon a review of environmental data provided in JBS&G (2017), to determine whether soil, groundwater and/or soil vapour impact reported in JBS&G (2017) posed an unacceptable risk to a proposed future use of the premises for commercial purposes. This has been interpreted as consisting of occupation of the building for commercial activity/durations by adults to assess the risk posed to future occupants of the premises.

The risk assessment considered maximum levels of TCE and PCE recorded in soil vapour in proximity to the premises, and the levels reported adjoining the premises. A sensitivity analysis was undertaken with the risk assessment which found that the estimated levels of risk were considered suitably conservative to premise decision making in relation to objectives stated.

The levels of sub-surface impact were reported to not pose an unacceptable health risk to potential future commercial users of the site. JBS&G stated that there was no potential for aesthetic impacts through recognition of odours associated with the site impact.

5.4 Data Gap Investigation – Penrith Central Village Park (JBS&G 2018a)

JBS&G was engaged to complete a data gap investigation (DGI, JBS&G 2018a) following identification of contamination potentially associated with the former dry cleaner. The DGI comprised targeted soil, groundwater, soil-vapour and indoor air sampling. The DGI reviewed historical DA/BA records for the former dry cleaner and service station. Additionally, sewer service diagrams for the dry cleaner were presented within the report (**Appendix E**).

JBS&G advanced six boreholes within the vicinity of the former dry cleaner (JBMW01 to JBMW05 and SV19). Three boreholes were advanced adjacent to the northern boundary of the site (JBMW02, JBMW05 and SV19), two advanced approximately 50 m west of the dry cleaner and one northeast of the dry cleaner, downgradient of the former service station. Additionally, two boreholes (JBMW06 and JBMW07) were advanced into the property locatd at 48 Belmore Street, approximately 100 m north of the dry cleaner. Selected soil samples were submitted for the following laboratory analysis:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- 8 samples for VOCs;
- 3 samples for PAHs;
- 3 samples for lead;
- 2 samples for fraction organic carbon (Foc); and
- 1 sample for heavy metals (As, Cd, Cr, Cu, Pb, Hg, Ni and Zn).

Encountered lithological conditions were generally consistent with those reported in JBS&G (2017). Shallow fill was encountered ranging from 0 to 1.2 m bgs, overlying silty and sandy mottled clays (0.4 to 8.9 m bgs), in turn overlying gravelly sandy clay (6.5 m to 12.1 m bgs). Residual shale bedrock was encountered at 11.5 m to 12.1 m bgs at locations JBMW01 to JBMW04.

Seven of the boreholes were converted to groundwater monitoring wells, which were later developed and sampled in addition to previously installed wells (PSM01, PSM02 and PSM03). The groundwater well installation logs are provided as **Appendix D**. Groundwater was sampled over two mobilisations with wells JBMW02 and PSM01 sampled twice. Groundwater samples were analysed for a range of COPCs (VOCs, TRHs and heavy metals).

JBS&G installed 7 sub-slab soil vapour probes surrounding Shop 3/134-138 Henry Street and following sewerage service infrastructure (**Figure 4C**). The sub-slab soil vapour probes were used to access shallow soil vapour. In addition, two boreholes (JBMW05 and SV19) were converted to deep soil vapour wells on the northern side of Henry Street. Soil vapour was sampled via extraction of soil vapours and sorption of VOCs to laboratory prepared carbon tubes. All seven samples were analysed for VOCs.

JBS&G conducted four rounds of indoor air monitoring at 134-138 and 140 Henry Street. Indoor air was sampled at several locations within the shops over 8-hour periods using summa canisters. The indoor air samples were analysed for VOCs. Atmospheric conditions were reported to vary over the sample periods which targeted hot and pressure drop conditions.

Laboratory analytical results are discussed as follows:

- No statistically significant exceedances of the site investigation criteria were reported for COPCs in soils;
- Groundwater concentrations were less than relevant environmental guidance values, with the exception of PCE in JBMW02 (0.15 mg/L) which exceeded the adopted ANZECC (2000[16]) 95 % protection and NHRMC (2017[17]) drinking water criteria;
- CEs were detected in SV11, SV14 and SV16, but were less than the adopted site assessment criteria, with the exception of SV14. PCE (42 mg/m^3) and TCE (2.88 mg/m^3) exceeded the adopted site assessment criteria (HIL-C, NEPM 2013) at location SV14. It is additionally noted that TCE was detected in SV14 at a concentration of 0.168 mg/m^3, exceeding HIL-B and HIL-D criteria.
- Indoor concentrations were generally less than the adopted screening criteria, with the exception of location 140_SHOP (9 April 2018). The concentration of TCE (20 µg/m^3) reported at location 140_SHOP on 9 April 2018 exceeded the adopted indoor air screening criteria.

Version: 1, Version Date: 14/04/2021

6. Conceptual Site Model

6.1 Overview

NEPC (2013) identifies a CSM as a representation of site related information regarding contamination sources, receptors and exposure pathways between those sources and receptors. The development of a CSM is an essential part of all site assessments.

NEPC (2013) identified the essential elements of a CSM as including:

- Known and potential sources of contamination and contaminants of concern including the mechanism(s) of contamination;
- Potentially affected media (soil, sediment, groundwater, vapours etc.);
- Human and ecological receptors;
- Potential and complete exposure pathways; and
- Any potential preferential pathways for vapour migration (if potential for vapours identified).

6.2 Potentially and Contaminated Media

Areas of environmental concern are shown on **Figure 3**. Potential and known contaminated media comprise:

- Fill materials;
- Underlying natural soils;
- Subsurface vapour and ground gases; and
- Groundwater

Table 6.1 Areas of Environmental Concern and associated Contaminants of Potential Concern

Areas of Environmental Concern (AEC)	Contamination Status	Potentially Contaminated Media	Contaminants of Potential Concern (COPC)
AEC 1 – Former Dry Cleaner 134-138 Henry Street (Lot 1 DP164798) Improper disposal/management of dry-cleaning chemicals	Known	Soil, groundwater, soil-vapour and indoor air	Chlorinated Ethenes (PCE, TCE, DCE)
AEC 2 – Former Service Station 118 Henry Street (Lot 1 DP113118) Potential UPSS and improper management of petroleum hydrocarbons	Potential	Soils	TRHs, PAHs, BTEX and lead
AEC 3 – Transformers Historical spillage/leakage of transformer oils underlying transformers within the Allen Place carpark.	Potential	Soils	TRHs and PCBs
AEC 4 – Fill material Underlying Buildings Fill materials of unknown origin used for site levelling and activities associated with development. Application of COPCs as a result of general maintenance during site occupation (pesticides, herbicides, fuel and oil spills etc).	Potential	soils	Heavy metals, PAHs, TRH, BTEX, OCPs, PCBs, VOCs and asbestos

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

6.2.1 AEC 1 Former Dry Cleaner

Soil, soil vapour and groundwater samples obtained during the DSI (JBS&G 2017a) and DGI (JBS&G 2019a) indicate that the greatest levels of chlorinated ethene impact is in the immediate vicinity 134-138 Henry Street and extending north and west of the premises. Detections of contaminant concentrations a considerable distance west of the premises provide evidence that the compounds may have migrated along the inferred sewerage infrastructure alignment. Impacts to site media are detailed in **Section 6.2.1.1** to **Section 6.2.1.4**

6.2.1.1 Soil Impacts

Soil samples analysed as part of the previous (JBS&G 2017a) and DGI (JBS&G 2019a) have not identified gross and/or widespread soil contamination. No soil samples analysed within the groundwater table, or nearby to sewerage infrastructure were reported to contain COPCs above the laboratory limit of reporting. Minor concentrations of PCE and TCE at location JHA04, underlying Shop 3/140 Henry Street, were reported in JBS&G (2017a).

Notwithstanding, it is considered likely that soils surrounding the sewerage infrastructure, and underlying the dry cleaner, have historically been impacted by dry cleaning solvents. The maximum levels of TCE reported in sub slab vapour are consistent with a source of chlorinated ethene being present in the unsaturated zone. Chlorinated ethenes can commonly be heterogeneously distributed through a soil profile, and localised within the extent of a sample of soil collected in clay based soils. Due to their characteristics subsurface chlorinated ethene impacted soils are not typically readily identified. Impacted soils are considered to potentially represent an ongoing source of contamination to both groundwater and soil vapour.

6.2.1.2 Groundwater Impacts

Groundwater analytical results indicated that PCE was present at concentrations exceeding the investigation criterion at JBMW02 and JBMW05, and above the laboratory limit of reporting in JBMW03, PSM01 and PSM03. Chlorinated ethenes were not detected in samples of groundwater collected from JBMW01, JBMW04, JBMW06, JBMW07 or PSM02. Trace concentrations of TCE in groundwater were reported at locations JBMW02 (0.002 mg/L to 0.009 mg/L), JBMW05 (0.002 mg/L) and PSM01 (0.001 mg/L).

It is noted that JBMW02 and JBMW05 are over the northern boundary of the site, providing evidence that the impact has migrated off the site via the groundwater. No groundwater monitoring wells have been installed directly into the chlorinated ethene impact source zone, although it is considered likely that the highest concentrations of chlorinated ethenes will be present directly underneath the dry cleaner.

Impacts to groundwater have been delineated north (JBMW06 and JBMW07), east (JBMW03), south (PSM02) and west (JBMW01 and JBMW04). Potential remains for groundwater impact to be present further northwest of JBMW05.

6.2.1.3 Soil vapour Impacts

Shallow Soil Vapour

Results obtained from the DGI (JBS&G 2019a) have shown that significant concentrations of PCE and TCE are present within shallow soil vapour (<0.3 m bgl) surrounding the dry cleaner. Soil vapour contaminant samples collected from locations SV11, SV14 and SV16 were reported to have concentrations of CEs above the laboratory limit of reporting. The highest results reported during the current assessment were associated with location SV14, which was placed immediately overlying sewerage infrastructure servicing the dry cleaner. Soil vapour samples collected from locations SV12, SV13, SV15 and SV17 were not reported to have any VOCs above the laboratory limit of reporting.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Within samples where both TCE and PCE were detected above the laboratory LOR, the ratio of PCE/TCE ranged from 4.143 to 14.49.

The distribution of CEs in soil vapour has provided evidence that the compounds have migrated within/alongside the sewerage infrastructure a considerable distance from the dry cleaner (>50 m). In addition, impacted soil vapour may be migrating over the northern boundary of the site, as indicated by elevated concentrations in SV11.

The investigation results indicate that the occurrence of CEs in shallow soil-vapour is not strongly correlated with presence in groundwater. Whilst volatilisation of CEs from groundwater is likely to be occurring, it is considered unlikely that it is occurring at a level which represents a risk to future site users on the basis of the following considerations.

- SV09 contained no soil vapour concentrations above the laboratory LOR with elevated underlying groundwater impact (PSM01, 0.033 mg/L to 0.059 mg/L);
- The largest groundwater impact (JBMW02) was near two soil-vapour sample locations which were reported to contain minimal concentrations (SV11) to no detection (SV12) of CEs in soil-vapour were present;
- SV16 contained elevated concentrations of CEs with no underlying groundwater impact (JBMW04), and the highest reported soil vapour impact is overlying adjacent to the sewerage infrastructure (SV14); and
- Groundwater is in excess of 7 m below the current ground surface.

Deep Soil Vapour

Two deep soil vapour samples were taken north of the former dry cleaner (SV18 and SV19). Samples were collected from 4.7 m to 5.0 m below ground levels. Highly elevated CEs were detected in both samples, exceeding interim HILs:

- SV18: PCE (367 mg/m^3) and TCE 1.62 (mg/m^3); and
- SV19: PCE (1300 mg/m^3) and TCE 8.83 (mg/m^3).

These results are indicative of the presence of contamination at beneath/adjacent to the former dry cleaners at depth. The relatively low concentrations in groundwater indicate that the deep source is unlikely to be present in the saturated zone. Additional assessment will be required to determine the extent of remediation required to address the presence of elevated CE in deep offsite soil vapour.

6.2.1.4 Indoor Air

Indoor air was sampled over four monitoring events (9 and 17 April 2018, 3 May 2018 and 15 November 2018). Samples analysed from Shop 3/134-138 Henry Street and Shop 3/140 Henry Street have indicated that the PCE is present within the indoor air of both premises. TCE was generally not detected above the laboratory limit of reporting in the analysed samples, with the notable exception of 140_SHOP on 9 April and 3 May 2018. **Table 6.2** and **Table 6.3** show ratios of indoor air to sub-slab vapour concentrations, and relative PCE to TCE concentrations within samples.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Table 6.2 Indoor Air and Sub-Slab VOC Concentrations

Sample Location	Highest Indoor Air Concentration (µg/m³)	Closest Sub-Slab Soil Vapour Concentration (µg/m³)	Indoor Air to Sub-slab Soil Vapour Ratio
Tetrachloroethene			
140_BATH	<3	14 500 (SV10)	<0.00021
140_SHOP	5	14 500 (SV10)	0.00035
DC_BATH	8	40 000 (SV14)	0.00020
DC_SHOP	8	40 000 (SV14)	0.00020
Trichloroethene			
140_BATH	<2.7	3500 (SV10)	<0.00077
140_SHOP	20	3500 (SV10)	0.00571
DC_BATH	<2.7	2760 (SV14)	<0.00098
DC_SHOP	<2.7	2760 (SV14)	<0.00098

Table 6.3 PCE to TCE Ratio in Site Media

Sample Location	Highest PCE Concentration (µg/m³)	Highest TCE Concentration (µg/m³)	Ratio of PCE/TCE	Approximate Distance From Shop 3/140 Henry Street / Distance From Shop 3/134-138 Henry Street (m)
Indoor Air				
140_BATH	<3	<2.7	-	Internal
140_SHOP	5	20	0.250	Internal
DC_BATH	8	<2.7	>2.963	Internal
DC_SHOP	8	<2.7	>2.963	Internal
Sub-Slab				
SV05	56 667	9333	6.072	<5 / 20
SV10	14 500	3500	4.143	Underlying / 15
SV14	40 000	2760	14.49	Boundary / < 5
SV16	1520	168	9.047	30 / 40

One reported concentration of TCE within indoor air sample 140_SHOP, 9 April 2018 (20 µg/m³), was inconsistent with the subsequent three samples taken at the same location, 17 April 2018 (<2.7 µg/m3),3 May 2018 (5 µg/m³) and 15 November 2018 (<2.7 µg/m³).

The ratio between TCE and PCE in this indoor sample was significantly different to all sub-slab soil vapour samples in which both TCE and PCE were detected. On this basis, the elevated concentration is considered likely to be the result of an additional, internal source within the premises, and is not considered to be reflective of CE advection from the sub-slab soil vapour.

6.2.2 AEC 2 Former Service Station

Environmental samples analysed as part of the site investigations (JBS&G 2017 and 2018) have provided evidence that gross and/or widespread contamination as a result of the former service station operation has not occurred.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Soil samples analysed from JBMW03, JHA04 and JHA06 were reported to have concentrations of TRHs below the adopted site investigation criteria. Soil vapour samples analysed from four locations surrounding the premises were reported to have concentrations of TRHs and BTEX compounds below the laboratory LOR or the site investigation criteria. No TRHs, PAHs or lead in groundwater above the laboratory LOR were reported at JBMW03. If any impacts to soil, groundwater or soil vapour have occurred as a result of the operation of the former service station, it is considered likely that they will be limited to minor, localised hotspots.

6.2.3 Additional Issues

Additional known and potential contamination issues identified are detailed in **Section 6.2.3.1** to **Section 6.2.3.3**.

6.2.3.1 Soil Characterisation

A total of 34 boreholes have been drilled across the site, on a generally systematic grid basis. The boreholes have been skewed as a result of the presence of site structures and to target AECs. Boreholes have provided adequate site coverage to inform site fill characterisation across the majority of the site. Notwithstanding, additional assessment/investigation of soils should be undertaken following removal of buildings to confirm that soil characteristics are consistent with those encountered across the balance of the site.

Fill materials have been reported/encountered across the entire site ranging from 0.15 m to 1.9 m depth. On average, the depth of fill is approximately 0.5 m (**Figure 6**). Fill was generally deeper underlying the commercial properties at the site, and shallower throughout the Allen Place car park. A deeper pocket of fill was identified at JB18 and JB19 terminating at 1.8 m and 1.9 m bgs respectively.

Fill materials are considered to be present due to a combination of historical land use activity and soil importation to establish levels/back fill services. Fill materials were generally identified to comprise a combination of silts and clays with varying sand content. Colours were observed to be primarily brown and grey with some orange/yellow clays also encountered. Anthropogenic inclusions were observed within fill material from some locations.

As presented in the characterisation summary tables (**Table A(1), Table A(2), Table B, Table C** and **Table D**) and **Figure 4A B**, fill materials have been shown to sporadically contain heavy metals (lead, nickel and zinc), TRH/TPH, PAHs, carcinogenic benzo(a)pyrene TEQ equivalent, CEs and asbestos to varying degrees. Statistical analysis of the contaminant data sets for soils, presented in JBS&G (2018), indicate that there are no statistically significant exceedances of the site suitability criteria (**Section 8**).

Identification of asbestos in soils was limited to a single occurrence of asbestos fines in shallow soils at location JB11. The concentration of asbestos was less than the site suitability criteria. It is noted, given the occurrence of anthropogenic inclusions within the fill soil profile, and the historical nature of the site, potential remains for additional asbestos impact within the fill.

Based on data presented in JBS&G (2017 and 2018), contaminant impacts in fill material appear to be associated with identifiable physical characteristics (such as the presence of slag, odours or staining), or underlying discrete point sources (JHA04, former dry cleaner).

With the exception of the above, and impacts discussed in **Section 6.1.1**, soils at the site are considered to be generally free from contamination. No odours, staining or asbestos were observed in any of the historical or current investigation locations. It is noted that the character of soils underlying existing building footprints, and underlying the four onsite transformers, has not yet been determined. Additionally, given the limitation of soil investigations via boreholes, there is the potential for asbestos impacts to be present within fill that have not yet been identified.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

6.2.3.2 Groundwater Characterisation

JBS&G (2017 and 2018) assessed groundwater conditions within eight wells, six on site (PSM01 to PSM03 and JBMW01, JBMW03, JBMW04), two adjacent to the northern boundary (JBMW02 and JBMW05) and two on 48 Belmore Street (JBMW06 and JBMW07) over three GMEs. Concentrations of COPCs were reported to be generally less than the adopted site assessment criteria, consistent with the absence of substantial contaminant mass in the overlying soils.

Notwithstanding, groundwater within the vicinity of the former dry cleaner has been reported to be impacted by CEs. Elevated concentrations of PCE, exceeding site investigation criteria (ANZAST 2018 and NHMRC 2017), were reported in offsite well JBMW02 and JBMW05, indicating that migration of the contaminants is occurring over the northern boundary via groundwater. The CE impact to groundwater was not detected in wells west of JBMW02 (JBMW01 or JBMW04) at concentrations exceeding site investigation criteria, providing delineation of the extent of significant impact.

JBS&G (2017) reported elevated concentrations TRHs in PSM01, PSM02 and PSM03, as well as elevated toluene in PSM01. Analytical results from later sampling rounds have indicated that these compounds were either not detected above the laboratory LOR or detected at substantially lower concentrations. It is considered that these compounds may have been associated with drilling advancement fluids employed as part of the geotechnical drilling methodology utilised for the installation of these wells.

Analysis of heavy metals within JBMW03 has identified arsenic and nickel at concentrations exceeding the adopted site criteria.

Groundwater at the site has been reported to be saline and unsuitable for use as drinking water. Saline groundwater was reported within the inferred upgradient well (PSM03), indicating that it is the result of background hydrogeological conditions and/or migration on to the site.

6.2.3.3 Soil Vapour and Indoor Air

Except for 134-138 and 140 Henry Street, no potential for soil-vapour or indoor air impact which may represent an unacceptable risk to future site users has been identified within the PCPV site.

6.3 Potential for Migration

Contaminants generally migrate from site via a combination of windblown dusts, rainwater infiltration, groundwater migration and surface water runoff. The potential for contaminants to migrate is a combination of:

- The nature of the contaminants (solid/liquid and mobility characteristics);
- The extent of the contaminants (isolated or widespread);
- The location of the contaminants (surface soils or at depth); and
- The site topography, geology, hydrology and hydrogeology.

The contaminants of concern identified in JBS&G (2017, 2019a and 2019b) are generally in solid (e.g. asbestos, metals and PAHs), liquid (e.g. VOCs, TPH and BTEX) or gaseous (e.g. VOCs, BTEX, Volatile TRH) form.

As the ground surfaces across the site primarily comprise sealed asphalt or concrete pavements and building footprints, the potential for windblown dust migration of contamination is generally low. The potential for contamination migration via surface water movement and infiltration of water and subsequent migration through the soil profile is considered generally to be low given the extent of impermeable pavements across the site.

The underlying natural soils at the site comprise primarily clayey soils and are relatively impermeable. Notwithstanding, CEs have been detected within groundwater (PSM01, JBMW02 and

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

JBMW05). On this basis, migration of contaminants via groundwater movement has been identified at the site.

Analysis of soil-vapour samples collected from shallow soils show that shallow soil vapour impacts are generally limited to 134-138 and 140 Henry Street. Deep soil-vapour samples collected on the northern side of Henry Street indicate that soil vapour impacts are present at depth beyond the northern site boundary. The scale of the impacts and generally low concentrations in groundwater imply the potential for a deep source of CEs in unsaturated horizons of soil potentially underlying Henry Street. Offsite vapour generation and transport is identified as a migration pathway.

6.4 Potential Exposure Pathways

Based on the COPC identified in various media, as discussed above, and proposed development activities, the exposure pathways for the site during and following development works are discussed below.

6.4.1 Recreational Public Open Spaces

Recreational public open spaces comprise areas which will not be used for building development (**Figure 2**). The following exposure pathways are relevant for site receptors within public open spaces:

- Potential dermal and oral contact to impacted soils as present at shallow depths and/or accessible by future service excavations; and/or
- Potential oral and dermal contact to groundwater as accessible by potential future service installation; and/or
- Inhalation of COPC vapours/gases/fibres migrating upwards from current *in-situ* soils/groundwater; and/or
- Potential contaminant uptake by vegetation proposed to be established in the vegetated areas of the site.

6.4.2 Building Development Areas

Building and development areas are shown on **Figure 2**. The following exposure pathways are relevant for site receptors within building development areas:

- Potential dermal and oral contact to impacted soils as present in areas of accessible soils and/or accessible by future service excavations; and/or
- Potential oral and dermal contact to groundwater as accessible by potential future service installations or potentially intercepted by future basements; and/or
- Inhalation of COPC vapours/gases/fibres migrating upwards or laterally (into basements) from current *in-situ* soils/groundwater; and/or
- Potential contaminant uptake by vegetation proposed to be established in the vegetated areas of the site.

6.4.3 Offsite Exposure

Potential offsite receptors of deep soil vapour impact are identified as basement occupants of 121 Henry Street, Penrith. Potential exposure is through advection of vapours from impacted soils/groundwater into the basement and inhalation by basement occupants. JBS&G (2019b) presents a vapour intrusion assessment, based on current site conditions, which indicates that no unacceptable concentrations of contaminants have been identified in indoor air within the basement of 121 Henry Street.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

The DGI provides a discussion of dilution/attenuation of contaminants within groundwater prior to discharge to the receiving water body (Peach Tree Creek), contaminant uptake by sensitive ecological receptors within the water body is considered not to be a potential exposure pathway which warrants further consideration.

Given the character of the groundwater, and the absence of identified groundwater bores within the vicinity of/downgradient of the site, potential beneficial reuse of the groundwater is not anticipated. Additionally, it is noted that groundwater is present at considerable depth below the current ground surfaces (7 to 8 m bgs). However, it has been conservatively assumed that groundwater may be intercepted by during construction of future basements within the residential/commercial precinct.

6.5 Receptors

Potential receptors of environmental impact present within the site which will require to be addressed include:

- Future occupants and/or site users who may potentially be exposed to COPC through direct contact with impacted soils, groundwater (within basements) and/or inhalation of vapours associated with impacted soils; and/or
- Excavation/construction/maintenance workers conducting activities at or in the vicinity of the site, who may potentially be exposed to COPC through direct contact with impacted soils/groundwater present within excavations and/or inhalation fibres/vapours associated with impacted soils/groundwater; and/or
- Future excavation/construction/maintenance workers who may potentially be exposed to volatile or semi-volatile COPCs through the inhalation of vapours via migration; and/or
- Current and/or future flora at the site who may be exposed to contaminants via direct uptake into root systems.

6.6 Preferential Pathways

For the purpose of this assessment, preferential pathways have been identified as natural and/or man-made pathways that result in the preferential migration of COPC as either liquids or gases.

Natural preferential pathways are likely limited to natural lithological borders, such as between porous soils and bedrock, where infiltrating groundwater is vertically confined and begins to migrate laterally.

Man-made preferential pathways are present throughout the site, generally associated with sub-surface service easements and areas of previously disturbed fill material.

The sewerage infrastructure abutting the western boundary of the former dry cleaner has been identified as a preferential pathway, and is considered likely to have potentially facilitated transport of CEs from the dry cleaner. Preferential pathways can be created by the generally higher permeability fill materials used as backfill to re-instate sub-surface service easements.

6.7 Data Gaps

Potential data gaps include:

- **AEC 1 –** Greater detail on the vertical and lateral distribution of TCE and PCE source material in soils underlying 134-138 and 140 Henry Street as inferred to be causing elevated levels of soil-vapour impact in shallow soils and at depth on the site.

  Where basements are proposed within 30 m of identified impacts, additional assessment of soil-vapour impacts is required to determine whether potential deep vapour impacts represent a risk to future developments;

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- **AEC 2 –** The occurrence of UPSS infrastructure and/or potential localized soil/soil-vapour impacts at 118-120 Henry Street;
- **AEC 3 –** Potential occurrence of impacted oils within shallow soils underlying transformers within the Allen Place Car Park; and
- **AEC 4 –** Potential occurrence of localised areas of asbestos impact and/or dissimilar fill characteristics material underlying current hardstand pavements and building footprints.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

7. Remedial Action Plan

7.1 Remedial Goal

The goal for the remediation and/or management of environmental impact is to:

- Remove unacceptable risks to human populations living at/working on/visiting the site posed by impacted site media;
- Remove or manage unacceptable ecological risks to flora/fauna posed by site media;
- Complete remediation work with in accordance with the principles of ecologically sustainable development (ESD)

7.2 Extent of Remediation

Based on the CSM and consideration of the proposed development it is considered that the following scope of remedial works is required for the site:

- AEC 1: A sufficient extent of remediation and/or on-site management of CE impacted soils and local sewerage infrastructure to prevent potential unacceptable exposures to TCE and/or PCE vapours of future occupants of the parkland. This will need to consider potential additional discharge of CEs to groundwater which may result from the removal of current hardstand pavements/coverings. Removal of sewerage infrastructure will be limited to services adjoining 134-138 and 140 Henry Street to the main sewerage infrastructure junction on the southern portion of the two premises (no removal of infrastructure mains is proposed unless substantial additional impacts are identified);
- AEC 2: Potential additional remediation to remove UPSS infrastructure and associated potentially impacted soils, or otherwise manage impacted soils to prevent potential unacceptable risks to future site users (if found to be present during additional assessment, remediation and/or excavation works); and
- AEC3 and 4: Potential additional remediation to remove impacted soils underlying current pavements/buildings/transformers, or otherwise manage impacted soils to prevent potential exposures to asbestos fibres (if found to be present during additional assessment, remediation and/or excavation works).

Characterisation of groundwater undertaken to date has not identified the requirement for groundwater treatment and/or remediation. The source of groundwater impact will be managed as per the above, removing ongoing contribution of COPC. Validation that the groundwater condition remains consistent or improves and does not represent an unacceptable risk to sensitive receptors will be required by the completion of groundwater monitoring and statistical analysis (**Section 8.2.6.7)**.

7.3 Assessment of Remedial Options

The *Contaminated Land Management: Guideline for the NSW Auditor Scheme* (EPA 2017[18]) lists the following order of preference for soil remediation and management:

- On-site treatment of the soil so that the contaminant is either destroyed or the associated hazard is reduced to an acceptable level;
- Off-site treatment of excavated soil so that the contaminant is either destroyed or the associated hazard is reduced to an acceptable level, after which the soil is returned to the site;

[18] *Contaminated Land Management: Guideline for the NSW Site Auditor Scheme (3ed Edition). NSW EPA 2017 (EPA 2017)*

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Removal of contaminated soil to an approved site or facility, followed where necessary by replacement with clean fill; and
- Consolidation and isolation of the soil on-site by containment within a properly designed barrier.

In addition, it is also a requirement that remediation should not proceed in the event that it is likely to cause a greater adverse effect than leaving the site undisturbed. And, where there are large quantities of soil with low levels of contamination, alternative strategies are required to be considered or developed (EPA 2017).

Remedial options have been assessed for the site as detailed in **Table 7.1** following.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Table 7.1: Remediation Options Assessment Matrix

Remedial Option	Applicability	Assessment
1. On-site treatment so that the contaminants are either destroyed or the associated hazards are reduced to an acceptable level.	AEC 1 – Former Dry Cleaner COPCs: Chlorinated ethenes (PCE, TCE and DCE) All COPCS: **Active *In-Situ* Remediation:** Active remediation of soils/groundwater *in-situ* is achieved by stimulation or injection of biota, or injection of an abiotic reducing agent, which are capable of dechlorinating the COPCs. Bio-remediation of chlorinated ethenes requires reducing conditions which are unable to be readily achieved upon excavation and exposure of soils to atmospheric oxygen. **Passive *In-Situ* Remediation:** Passive remediation of soils/groundwater/soil-vapour *in-situ* is achieved by monitored natural attenuation (MNA). Natural attenuation is governed by physicochemical and biological processes which are native to the relevant aquifer/soils. **Active *Ex-Situ* Remediation:** Active remediation of soils *ex-situ* is achieved by excavation of soils and removal/destruction of COPCs, followed by replacement of soils on the site. Biological destruction of chlorinated ethenes is not readily achieved in oxygen rich environments. Bio-remediation of chlorinated ethenes requires reducing conditions which are unable to be readily achieved upon excavation and exposure of soils to atmospheric oxygen. However implementation of bio-piles may be applicable for removal of VOCs. Bio-piles consist of heaped stockpiles of the soil provided with an internal network of screened piping. Air is extracted from the screened pipe sections, by use of a vacuum pump, or by the use of passive flow devices. Collected air requires treatment/filtration to remove volatile constituents. Fresh air is drawn into the bio-piles over the remainder of the stockpile surface. High concentrations of contaminants, such as anticipated occurrences of phase separated hydrocarbon impact being present on soils, are toxic to the micro-organisms typically preventing effective remediation by bioremediation. Groundwater may be remediated via pump and treat system involving a water treatment plant. Treatment of soils and/or groundwater by highly energy intensive processes such as incineration, washing, pyrolysis and sonic treatment were not assessed given they are not in alignment with the principles of ESD.	AEC 1 COPCs: Chlorinated ethenes (PCE, TCE and DCE) Onsite treatment for removal of chlorinated ethenes is the preferred option where substantial quantities of impacted site media are identified to require treatment under the proposed development scenario. Further detail and discussion is provided below. The success of onsite/offsite treatment is dependent on many factors, including the time available for treatment and soil physicochemical properties. Where onsite/offsite treatment does not reduce COPC concentrations to acceptable levels within reasonable timeframes, Option 3 is the preferred option. All COPCs – The Preferred Option: **Active *In-Situ* Remediation:** Active remediation of *in-situ* media is not a suitable option, given the inferred low hydraulic conductivity of the impacted material which would substantially limit injection of the remediating media (biotic or abiotic). **Passive *In-Situ* Remediation:** Passive remediation via MNA is the preferred option for onsite/offsite impacts where the condition of the site is not proposed to change, and it can be demonstrated that no current/future risk to onsite/offsite receptors is present as a result of the contamination. Where no changes to the existing site condition are proposed, such as underlying the Henry Street road surfaces/footpaths, and it is demonstrated that no ongoing risk to current/future site receptors is present, MNA is the preferred option. Where existing hardstands are to be removed, exposing impacted soils, as is anticipated in the proposed public open spaces, impacted soils will require active remediation prior to implementation of MNA for groundwater/soil-vapour impacts. **Active *Ex-Situ* Remediation:** Remediation of soils by excavation and stripping of VOCs via bio-piles is the preferred option for chlorinated ethene impacted soils. This method will be appropriate for the volatile contaminant impacts where gross hydrocarbon impact is not present, however may not be suitable within clayey soils. The implementation of this method requires consideration of potential time constraints. Bioremediation may be required for extended periods (potentially exceeding six months where soils are fine grained).

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Remedial Option	Applicability	Assessment
		Active groundwater treatment is not the preferred option where MNA is able to be implemented per the above. Assessment of energy intensive active treatment technologies has not been completed in detail given they are not in alignment with the principles of ESD.
	AEC 2 – Former Service Station COPCs: TRHs, BTEX, PAHs and Lead No substantial impact to either soil-vapour or groundwater has been identified at the site. Where impacts exist, it is anticipated that they are limited to minor/localised soil hotspots. TRHs and BTEX Given that soil contaminants associated with petroleum storage consist of hydrocarbon constituents, there is a potential that they may be able to be remediated on site by a bioremediation style remediation method. Bioremediation occurs where contaminants are chemically broken-down by the metabolic processes of micro-organisms into less toxic or non-toxic forms. Recent NSW EPA guidance requires bioremediation methods to demonstrate that pollutant emissions are not discharged to the atmosphere. PAHs Polycyclic aromatic hydrocarbons present in site soils are typically restricted to heavier non-volatile constituents. These can be remediated by thermal processes. However, this requires substantial investment in plant and equipment and high energy use. There are a number of microencapsulation treatment technologies which can reduce the mobility of the identified organic contaminants of concern (e.g., cement stabilisation). Lead Metals are unable to be destroyed. However, there are a number of microencapsulation treatment technologies which can reduce the mobility of the identified inorganic contaminants of concern (e.g. cement stabilisation).	AEC 2 COPCs: TRHs, BTEX, PAHs and Lead TRHs and BTEX – The Preferred Option Similar to chlorinated ethenes, TRHs and BTEX compounds are able to be removed from soils by active ex-situ remediation. Bio-piles are the most cost and time effective methodology. Given petroleum products are amenable to aerobic bio-degradation, bio-piles have the secondary benefit of stimulating biological degradation of the products, where identified. Bio-piles are the preferred remedial option where petroleum hydrocarbon impacts to soil are identified. PAHs and Lead – Not a Suitable Option Remediation options are available for PAH contaminated fill contaminants, generally restricted to thermal treatment processes which are energy intensive. These options are not considered consistent with the ESD objectives for the site. Microencapsulation is not considered necessary given the absence of identified groundwater impacts requiring remediation.
	AEC 3 and AEC 4 COPCs: TRHs, PCBs, heavy metals, PAHs, BTEX, OCPs, VOCs and Asbestos	AEC 3 and AEC 4 COPCs: TRHs, PCBs, heavy metals, PAHs, BTEX, OCPs, VOCs and Asbestos

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Remedial Option	Applicability	Assessment
	TRHs, PCBs, OCPs, PAHs and VOCs These compounds are amenable to thermal destruction. Heavy Metals Metals are unable to be destroyed. However, there are a number of microencapsulation treatment technologies which can reduce the mobility of the identified inorganic contaminants of concern (e.g. cement stabilisation). Asbestos There is no known technology to remove asbestos fibres from soils. Asbestos present in non-friable forms can be remediated by screening to remove oversize materials. However, the co-occurrence of a range of construction and demolition materials with the asbestos containing material reduces the potential effectiveness of screening processes. In addition, where asbestos fines impacts have been identified, screening of impacted material increases the risk of exposure to site workers and migration of fibres within the works area.	TRHs, PCBs, OCPs, PAHs and VOCs – Not the Preferred Option The potential quantities of these compounds within AEC 3 and AEC 4 at the site do not warrant the energy and logistical effort required to establish onsite treatment facilities. Further, the energy requirement to facilitate thermal destruction of is not in accordance with the principles of ecologically sustainable development. Heavy Metals – A Potential Option Metals are unable to be destroyed. However, there are a number of microencapsulation treatment technologies which can reduce the mobility of the identified inorganic contaminants of concern (e.g. cement stabilisation). Asbestos – Not a Suitable Option There is no treatment method available for asbestos impacts.
2. Off-site treatment so that the contaminants are either destroyed or the associated hazards are reduced to an acceptable level, after which the soil is returned to the site.	AEC 1 – Former Dry Cleaner COPCs: Chlorinated ethenes (PCE, TCE and DCE) All COPCS: Similar to Option 1, several treatment technologies exist which are capable of removing and/or destroying the COPCs	AEC 1 – Former Dry Cleaner COPCs: Chlorinated ethenes (PCE, TCE and DCE) All COPCs – The Preferred Option: Similar to Option 1 removal of COPCs from site media, and minimization of landfill contributions is the preferred option. Where substantial soil impacts are identified which require treatment, or where other COPCs such as asbestos in soils are identified, this is not a suitable option. AEC 1 to AEC 4 COPCs: TRHs, BTEX, PAHs, Where small quantities of impacted soils require treatment, this is the preferred option. Establishing onsite remediation/treatment facilities carries large establishment costs. However, additional time, energy and costs are incurred to take soils off site and return them to the site.
	AEC 2 – Former Service Station COPCs: TRHs, BTEX, PAHs and Lead	AEC 2 – Former Service Station COPCs: TRHs, BTEX, PAHs and Lead All COPCs: Not the Preferred Option

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Remedial Option	Applicability	Assessment
	No substantial impact to either soil-vapour or groundwater has been identified at the site. Where impacts exist, it is anticipated that they are limited to minor/localised soil hotspots. TRHs, BTEX, PAHs and Lead Similar to Option 1, several treatment technologies exist which are capable of removing and/or destroying the COPCs	The anticipated quantities of impacted soils, comprising minor and/or localised hotspots, does not warrant the logistical and energy investment required to export and reimport soils to the site.
	AEC 3 and AEC 4 COPCs: TRHs, PCBs, heavy metals, PAHs, BTEX, OCPs, VOCs and Asbestos Similar to Option 1, with the exception of Asbestos, these compounds are amenable to treatment.	AEC 3 and 4 COPCs: TRHs, PCBs, heavy metals, PAHs, BTEX, OCPs, VOCs and Asbestos All COPCs: Not the Preferred Option The anticipated quantities of impacted soils, comprising minor and/or localised hotspots, does not warrant the logistical and energy investment required to export and reimport soils to the site.
3. Excavation and off-site removal of the impacted soils.	All COPCs There are currently suitably licensed waste facilities in the Sydney Metropolitan region capable of accepting the identified contaminants.	All COPCs A potentially suitable option but inferior to Option 1, Option 2 and Option 4 where viable. The environmental impact of the transport of materials, waste generation and resource use in sourcing materials to re-instate the site to development levels is considered inconsistent with the principals of ecologically sustainable development. Whilst this method is viable from a technical and practical view point, as a result of resource consumption and waste generation volume considerations, this is not the most preferred remedial option available. However, where materials are identified as not being environmentally suitable under Option 1, Option 2 or Option 4, or surplus to construction requirements then this is the preferred option.
4. On-site *in-situ* management of the soil by physical separation, and ongoing management.	AEC 1 COPCs: Chlorinated ethenes (PCE, TCE and DCE) VOC impacted soils, based on the assessment to date **(Section 5** and **Section 6**), have been inferred to be the source of groundwater and soil-vapour impacts at the site. On this basis, VOC impacted soils are not suitable for retention on the site without treatment such that the VOCs are reduced to an acceptable level.	AEC 1 COPCs: Chlorinated ethenes (PCE, TCE and DCE) Not a suitable option.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Remedial Option	Applicability	Assessment
	AEC 2, AEC 3 and AEC 4 COPCs: TRHs, PAHs, Heavy Metals, OCPs, PCBs, VOCs and Asbestos Volatile COPCs (v-TRH, BTEX and VOCs) Where present, v-TRHs, BTEX and VOCs represent unacceptable migration risks and are not readily encapsulated by onsite retainment technologies. Non-volatile COPCs (sv-TRH, PAHs, heavy metals, OCPs, PCBs and Asbestos) Fill materials, based on the assessment to date (refer to **Section 5** and **6**), have been found to be largely free of constituents at concentrations which pose an unacceptable risk to future site users under the proposed development scenario. Notwithstanding, the potential for these constituents to be present in soils not yet assessed at the site exists. Assessment conducted hitherto has not identified potential impacts in soils: • That will pose a potential groundwater risk by the demonstrated absence of significant groundwater impact attributable to the site; and • That will pose a potential inhalation risk as demonstrated by the assessment of vapours. On this basis, the fill materials potentially contaminated by these compounds are likely to be suitable for retention on the site in areas where direct contact human/ecological exposures can be restricted. Where materials are identified as not being suitable for containment, Option 3 is the preferred remedial strategy.	AEC 2, AEC 3 and AEC 4 COPCs: TRHs, PAHs, Heavy Metals, OCPs, PCBs, VOCs and Asbestos Volatile COPCs (v-TRH, BTEX and VOCs) Not a Suitable Option Non-volatile COPCs (sv-TRH, PAHs, heavy metals, OCPs, PCBs and Asbestos) The preferred option. The retention of the materials will reduce the waste generation and resource requirements of the remediation of the site, as consistent with the ecologically sustainable development. The PCPV will be subject to significant areas of building and pavements which will provide physical separation between site users and retained impacted fill materials if present. This option is of highest ranking with respect to the ecologically sustainable development principles as a result of the low waste volumes and energy use. However, consideration of the practical implications of an ongoing site management is required prior to implementation where impacted materials are proposed to be retained.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

7.4 Proposed Remedial Approach

As shown in **Table 7.1**, with consideration to EPA (2017) hierarchy for remediation and the principles of ecologically sustainable development the remediation strategy for the proposed development is presented below.

- **AEC 1** – Delineate the extent of impacted soils via soil vapour assessment. Remove all impacted soils and local sewerage infrastructure servicing 134-138 and 140 Henry Street premises. Where onsite treatment is not viable or is unsuccessful, dispose of impacted soils to landfill.

  The anticipated maximum extent of impacted soils within the PCPV site is shown on shown on **Figure 6**. Soil impacts may extent north, into Henry Street, however this is outside of the PCPV project site. Based on the lateral extent occupied by 134-138 and 140 Henry Street, the anticipated maximum extent of VOC impacted soils which remediation is less than 1600 m^3.

- **AEC 2** – Ascertain whether UPSSs exist within 118-120 Henry Street.
  - If UPSSs are identified, remove to a disposal facility, assess surrounding soils to determine whether impacts are present. Excavate impacted soils (if present) and treat on-site. Where onsite treatment is not viable or unsuccessful, dispose of impacted soils to landfill;
  - If impacted soils are identified, excavate impacted soils and treat on site. Where onsite treatment is not viable or unsuccessful, dispose of impacted soils to landfill; and
  - If neither UPSSs or soils are identified, no remediation for AEC 2 required;

  The extent of potentially impacted media within AEC 2 is limited to soils in the vicinity of the UPSS (if present). Gross and/or widespread soil, groundwater and soil-vapour impacts within AEC 2 have not been identified.

- **AEC 3** and **4** – Ascertain whether residual soil impacts exist underlying current buildings/transformers (per **Section 7.6.3**).
  - If impacts are identified, preferentially retain the material onsite under a suitable cap covering to preclude future direct contact by human and ecological site receptors. Where onsite retention is not possible, or redevelopment works result in soils being surplus to development requirements, excavate impacted soils and dispose to landfill;
  - If no residual impacts are identified, no remediation for AEC 3 and AEC 4 is required.

If impacts are identified with AEC 2, AEC 3 or AEC 4 which require onsite retention, the proposed physical separation arrangements, providing physical separation from retained fill are presented in **Sections 7.6.5** (landscaped areas) and **7.6.8** (road reserves/paved areas). Soils moved within the site will require a material tracking system to be implemented during works (as described in **Section 7.6.12**).

If volatile contaminant impacts are identified within any of AEC 2, AEC 3 or AEC 4 during remediation works, potential for the generation of vapours needs to be assessed to determine whether implementation of a 'cap/cover' remedial strategy as indicated in ANZECC (1999), in conjunction with appropriate control measures, is appropriate with respect to management of the health risk.

7.5 Regulatory and Planning Requirements

The following planning requirements for the proposed remedial works are presented.

Environment Planning and Assessment Act 1979/SEPP 55

Under Clause 9 (d) of SEPP 55, remediation work is considered Category 1 remediation work (i.e., requiring development consent) when the development for which another State environmental

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

planning policy or a regional environmental plan requires development consent. The site is located within the boundary of the Sydney Regional Environmental Plan No. 20 – Hawkesbury-Nepean River (No .2 – 1997) (SREP20) and therefore any remediation works require development consent under SREP20. Clause 11 (4) of SREP20 requires consent for remediation.

On this basis, the proposed remedial works at the site are considered to be Category 1 Remedial Works (as per SEPP 55) and require consent.

The nature of remediation works is relatively well understood and it is considered most appropriate that development applications for remediation works are included with DA documentation for the associated earthworks as ancillary to other development. Where development proceeds in stages, which preclude readily completing concurrent remediation and site redevelopment, a separate planning consent may be required to complete remediation of the site.

Environment Planning and Assessment Regulation 2000 – Schedule 3 Designated Development

The proposed remediation works do not constitute designated development. With reference to the triggers listed in Schedule 3, the following commentary is provided:

- Remediation of the site will not comprise treatment or storage of contaminated soil not originating from the site; Remediation will not affect an aggregate area exceeding 3 hectares;
- The proposed remediation works will not incorporate on-site treatment by any means of soil in exceedance of 30 000 m^3; and
- The proposed remediation works will not incorporate treatment by incineration of more than 1000 m^3

Protection of the Environment Operations Act 1997

All potential discharges from the site during remediation works will require to be maintained below applicable assessment criteria/threshold guidelines during the remediation works. This would apply to potential emissions in air, water and discharges to groundwater. Levels of discharges are typically assessed at a site boundary.

The proposed remediation/validation activities are not required to be licensed under the Protection of the *Environment Operation Act (1997)*. The site is less than 3 ha in area, does not store greater than 30 000 m^3 of contaminated fill and hence does not trigger the licensing requirements.

Water Management Act 2000

Should dewatering be required, a dewatering and potentially a re-injection approval will be required from the NSW Department of Primary Industry - Water (DPI-Water) for any dewatering proposed with the site works. The approval will require to be obtained prior to the undertaking of any groundwater dewatering and treatment. Depending on the depth of proposed basements, temporary dewatering may be required.

Protection of the Environment Operations (Waste) Regulation 2014

The regulations make requirements relating to non-licensed waste activities and waste transporting. The proposed works will not require to be licensed. Section 48 of the Reg. requires that wastes are stored in an environmentally safe manner. It also stipulates that vehicles used to transport waste must be covered when loaded. This regulation also details additional tracking requirements for vehicles carrying Special (Asbestos) waste.

Provision is provided in the Regulation and EPA (2014a) guidelines for the NSW EPA to approve the immobilisation of contaminants in waste (if required).

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

It is noted that no waste will be received at the site and only VENM, excavated natural material (ENM) or materials covered by a NSW EPA exemption will be imported to the site.

Protection of the Environment Operations (Underground Storage Systems UPSS) Regulation 2014

The removal of UPSSs (if present) will be undertaken in accordance with WorkCover NSW requirements and a validation report will be provided in accordance with the provisions of the *Protection of the Environment Operations (UPSS) Regulation 2014*. The validation process in this RAP meets the requirements of the regulation.

Waste Classification Guidelines (EPA 2014a[19])

All wastes generated and proposed to be disposed off-site shall be assessed, classified and managed in accordance with this guideline. Where wastes require immobilisation prior to off-site disposal (to reduce waste classifications) an immobilisation approval shall be sought in accordance with Part 2 of this guideline. Immobilisations are only anticipated to be required with unexpected finds.

NSW Aquifer Interference Policy (NSW Office of Water 2012)

Groundwater underlying the site will potentially be classified as an aquifer as per the policy. The policy does not apply to the site development as any works proposed to be undertaken within the saturated portion of the site will not contaminate groundwater (as assessed by comparison to applicable standards and guidelines) and will not cause an unacceptable loss of storage or cause structural damage to the aquifer.

Penrith City Council 'Penrith Development Control Plan 2014'

The Council development control plan (DCP) provides a number of environmental and site management provisions required to be employed during remediation works. These have been incorporated into this RAP as minimum standards for the environmental management of remediation works.

Work Health and Safety Act 2017 No 10 and Work Health and Safety Regulation 2017

The information and data provided in this RAP should be considered by the Principal/Remediation Contractor in preparation of their health and safety plans for the remedial works.

7.6 Remedial Scope of Works

It is envisaged that remedial and validation works will be potentially conducted as a staged process as required for the site development. Within each proposed stage, remediation works will comprise, where appropriate the following actions.

7.6.1 Site Establishment

For each stage of remediation works the boundary will be defined (via survey) and secured as appropriate to ensure that all safety and environmental controls are implemented, including necessary contractor briefings and inductions for the remediation workforce. A summary of the controls is provided in **Section 10**.

7.6.2 Demolition of Overlying Buildings and Current Hardstands

Buildings and pavements currently present at the site are anticipated to be demolished to facilitate the proposed development. The demolition will expose underlying impacted soils and areas requiring additional assessment.

[19] Waste Classification Guidelines – Part 1: Classifying Waste. NSW EPA 2014 (EPA 2014a)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Premature exposure of impacted soils within AEC 1 may result in additional recharge (by rainfall or other surface water infiltration) through impacted unsaturated soils. Hardstand pavements overlying AEC 1 will be maintained in reasonable condition until the area is to be remediated.

7.6.3 Refine Remedial Extents

Subsequent to demolition of overlying buildings and hardstand pavements, formerly capped AECs will be exposed and available for additional assessment. The following assessment activities will be undertaken to refine the remedial extent:

- **AEC 1**: Remedial extents for AEC 1 will be refined in accordance with the following program:
  - A Vapour Sampling, Analysis and Quality Plan (VSAQP) will be prepared to inform the requirements of the relevant RWP(s). The VSAQP will stipulate the requirements of a soil-vapour screening assessment on an approximate 5 m grid within the footprint of 134-138 and 140 Henry Street. The soil vapour assessment will be undertaken by installation of temporary multi-level soil vapour probes. Probes will be screened onsite with a compound specific GC-PID, and subsequent confirmatory sampling/analysis using a carbon tube methodology, to determine the extent of impacted soils generating unacceptable concentrations of soil-vapour contamination. The anticipated remedial extent will be informed by trigger levels derived through a development specific risk assessment;
  - Where building development potentially includes multilevel basements, delineation of deep soil-vapour impact extending east of AEC 1. Determination will be made based on the location of proposed basements and relative distance to identified soil-vapour/groundwater impacts and requirements for remediation/management and validation will be included in the relevant RWP(s).
- **AEC 2:** upon demolition of the overlying building at 118-120 Henry Street, assessment for the potential presence of UPSSs will be undertaken. Inspection of the ground surfaces for fill/vent points and scanning with a Ground Penetrating Radar will be undertaken. Fill material will be assessed for the presence of potential petroleum hydrocarbon related impacts by collection and laboratory analysis of samples from four locations across the property as collected via test pit excavation methodology;
- **AEC 3:** Soils underlying current transformers will be assessed by collection/analysis of soil samples. Where no indicators of contamination (staining, odours, free oils, etc.) are identified, one sample is proposed to be analysed from soils with anticipated highest probability of impact underlying each transformer. Should gross indicators of impact be identified, or preliminary results identify contaminated soils, further sampling analysis will be required to determine the extent of impact/remediation. Samples will be assessed for TRHs and PCBs; and
- **AEC 4**: The site fill material has been broadly characterised, however limited site access has precluded assessment of soils underlying current buildings. Soils underlying current buildings will be assessed for the presence of COPCs via test pits. The required number of test pit locations for each building is presented following:
  - Lot 1 DP 526304, Lot E EP 163176, Lot 2 DP 556075 – one location;
  - Lot 11 DP 556665 and Lot 1 DP 164798 – two locations; and
  - Lot 10 DP 553665, Lot 1 DP 113118 and Lot 1 DP 545578 – four locations.

  Test pits will be advanced to a depth of at least 0.5 m into undisturbed natural materials. Soil samples will be collected from fill material analysed for a range of COPCs (**Table 6.1**). Where elevated total soil concentrations are identified, leachate samples will be prepared to determine whether any risk to groundwater is present.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

7.6.4 Excavation of Impacted Soils

Soils within the footprint of 134-138 and 140 Henry Street and any soils identified as exceeding validation criteria (as derived in the VSAQP or generic criteria presented herein i.e. NEPC (2013)) are required to be excavated and separated from the balance of the site fill materials/natural soils. The inferred extent of the dry-cleaner remediation area is shown on **Figure 6**.

VOC impacted fill material will be refined by future pre-remedial investigation works advised by VSAQP. Upon excavation to the inferred remedial extent, confirmatory field screening and laboratory analysis of soil-vapour will be undertaken to ensure that unacceptable levels of soil-vapour contamination are not present within the residual soils, with risk-based action criteria provided in the VSAQP. Excavated fill materials will be temporarily stockpiled. Stockpiling shall be undertaken to restrict potential environmental emissions in accordance with the requirements of the REMP as discussed in **Section 10**.

The volume of potentially impacted shallow sub-surface soils (based on distance between vapour samples with no HIL-B/HIL-C soil-vapour exceedances, and an average depth of impact of 2 m) is estimated to be 1600 m^3.

Deep soil vapour impact has been identified offsite however the general absence of sub-slab vapour contamination (as evidenced by JBS&G (2019a)) indicates that deep sub-slab vapour contamination is not migrating to the ground surface. Potential migration of vapours back onto the site upon removal of impacted site soils will be considered where basements are proposed per the data gaps discussed in **Section 6.7** and as part of the validation process discussed in **Section 8**.

Petroleum hydrocarbon or other impacted soils (if identified) will be remediated as discussed below or removed from the site to a facility lawfully able to accept the material.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

7.6.5 Treatment of Chlorinated and Petroleum Hydrocarbon Impacted Soils

Chlorinated ethene impacted soils and, if identified during remedial extent refinement, petroleum hydrocarbon impacted soils shall be treated within the site, where practicable. Treatment will be undertaken by bioremediation and/or compound removal as conducted within biopiles.

Compound removal is completed by stripping chlorinated ethenes from soil surfaces and adsorption of compounds on to an adsorptive media (e.g. activated carbon). Bioremediation is stimulated by increasing oxygen content within the soils to cause aerobic decomposition of petroleum hydrocarbons. Bio-piles will be constructed and operated in a manner that achieves the bioremediation outcomes for the soils while eliminating the potential for environmental emissions. Bio-piles shall be constructed and operated as per the following general specifications:

- Bio-piles shall not exceed 2 m in height;
- Bio-piles shall be provided with screened/slotted piping (i.e. ag line or similar) throughout the stockpiled material. Piping shall be provided at a typical 0.5 m spacing throughout the bio-pile and screened/slotted sections shall be covered by soils within the stockpile;
- Air shall be drawn through the slotted pipes. This causes air to be drawn into the bio-pile and air emissions from the bio-pile (which is anticipated to be malodorous) to be received at a common discharge point; and
- Air emissions shall be filtered through a granular activated carbon (GAC) filter prior to discharge to the atmosphere.

The bio-pile will be covered. The bio-pile will require to be periodically watered to maintain moisture conditions within the soils for bio-remediation. The GAC filter shall be sized on the basis of the size of the bio-pile and observation of emissions from the GAC filter. Where malodorous emissions are observed through the GAC filter, additional filter media shall be required.

Treatments works are required to be undertaken in accordance with *Best Practice Note: Landfarming, NSW, EPA* 2014b. Specific details of the treatment methodology, associated controls and required validation will be provided in relevant RWP(s).

Where the practicality of landfarming is hindered by redevelopment specifics (timing, available space, community objection, etc.) then impacted soils will be disposed of from the site to landfill. Details of the contingency will be provided in the relevant RWP(s).

7.6.6 Physical Separation

If non-leaching/non-volatile soil contamination is identified during remedial extent refinement, the impacted soils will be preferentially retained on site. If the soils are demonstrated as being suitable for retention on site subject to removal of direct contact exposure, then the following procedure will be implemented.

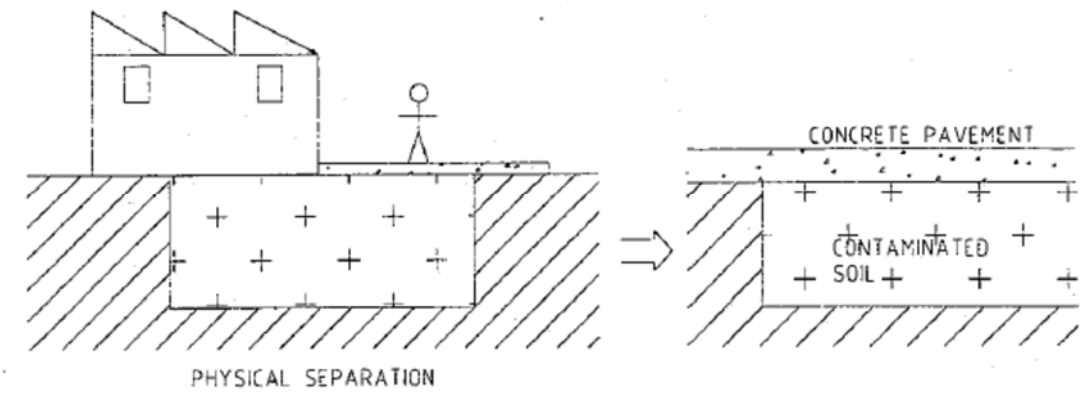
The principal of the on-site management approach within the site is to retain materials in-situ by providing physical separation between impacted fill/soil materials and receptors (e.g. site users, flora or fauna). The management approach prevents direct contact via permanent pavements/minimum soil thickness arrangement (i.e. physical separation), and implementation of a long-term EMP to maintain the physical separation arrangements.

The minimum typical requirements in ANZECC (1999) for physical separation include:

- Permanent concrete floor slab or asphalt surfaced pavement. The pavement outside of the building footprint shall be underlain by a marker layer; or
- A thickness of soil that is unlikely to be penetrated by future users of the site. A minimum soil cover thickness of 0.5 m is nominated as underlain by a layer of ‘marker layer’ in areas of exposed site soil (i.e. landscaped beds and parklands).

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

As shown schematically below:



Source: ANZECC (1999)

The marker layer shall consist of orange geofabric. The specific details of the marker layer will require to be included in the validation report and long-term EMP documents in addition to plans showing the extent of capped area within the site.

Material above the marker layer extending to the final finished ground level will be required to be environmentally suitable material for human and/or ecological exposure (as appropriate). These physical separation arrangements shall generally comprise growing media, but may potentially comprise material originating from within the site validated as suitable for reuse in accordance the requirements outlined in **Sections 8**; imported VENM or material certified in accordance with an exemption issued by the NSW EPA. Where materials are proposed for beneficial reuse under a NSW EPA exemption (i.e. imported to the site), fill material will need to be further assessed for land use suitability. Sampling densities and analysis for COPC will be dependent on the volume, material type, source and subject to Site Auditor endorsement and acceptance.

Installation of physical separation arrangements shall be defined by survey as completed by a registered surveyor and/or building as-built drawings sufficient to identify:

- The lateral extent and upper depth height of known environmentally impacted materials (i.e. residual fill materials underlying the cover) within each remediation area/stage;
- The lateral extent and type of cover (e.g. permanent pavement) within the remediation area/stage; and
- Confirmation, by photos or otherwise, of the installation of the 'marker layer' underlying the cover (as required).

A thicker cap may be required in areas of deep planting and/or service installation. Detailed cap construction requirements are required to be provided within relevant RWP(s).

7.6.7 Importation and Off-site Disposal of Fill Materials

Reference should be made to **Section 8** for sampling densities and analytes and compliance with relevant EPA made or endorsed guidelines.

7.6.8 Asbestos Management

Based on the available site characterisation information as discussed in **Section 5**, fill materials within the site have been assessed for the presence of asbestos in soils and have been found to be largely free from asbestos impacts. Notwithstanding, the potential for asbestos impacts to be identified in shallow fill materials upon demolition and removal of overlying hardstands. Given the identification of building and demolition wastes in fill across the site, and the identification of asbestos in soils at location JB11, fill material within the vicinity of this location (as shown on **Figure**

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

6) is required to be considered as potentially impacted with asbestos fibres, and are provisionally classified as asbestos contaminated soils in accordance with the Work Health and Safety Regulation 2017 until deemed otherwise.

Soil asbestos concentrations are not in exceedance of site suitability criteria, and remediation of soils to remove asbestos impacts is not required for the purpose of making the site suitable for the proposed development. Notwithstanding, management of asbestos is required during development works to ensure that workers and/or offsite receptors are protected.

Asbestos contaminated soil necessitating management for potential asbestos exposure is defined in *How to Manage and Control Asbestos in the Workplace Code of Practice*, 2016, Safe Work Australia/NSW WorkCover 2016 (SWA 2016/NSW WorkCover 2016) as:

- Soil that contains visible asbestos as determined by a competent person; or
- Soil that contains asbestos fibres at quantities exceeding trace levels (considered to be the analytical detection limit in lieu of alternate guidance) as reported by analysis undertaken in accordance with AS4964:2004 *Method for the qualitative identification of asbestos in bulk samples*.

Environmental, health and safety management requirements for the handling of these materials will be based on the requirements provided for asbestos-related works in SWA 2016/NSW WorkCover 2016. This will include preparation of an asbestos register and associated asbestos removal control/management plan as outlined in SWA 20161/NSW WorkCover 2016.

Where sampling and analysis of specific fill materials is completed in conjunction with inspection by a competent person, and the results indicate the material does not fall within the “asbestos contaminated soil” definition, the requirements for management of “asbestos contaminated soils” will not be required to be implemented. The extent of asbestos contaminated soils may be further delineated within a work stage by a similar assessment (i.e. identification of asbestos contamination hotspots).

For the purposes of remediation works within the site, a competent person shall be considered to be a person who holds a tertiary degree in an environmental discipline, has experience in contaminated site assessment and has completed a WorkSafe approved Asbestos Removal Supervisor course.

7.6.9 Movement of Material

Movement of materials will be required at the site and shall be moved as per a material tracking plan as documented following. The tracking system is designed to track the quantity and quality of materials from their arrival on site or their derivation point, through temporary storage to placement.

The system comprises the following elements;

- Definition of Roles and Responsibilities;
- Material quality information;
- Material movement tracking;
- Material emplacement;
- Documentation required;
- Dealing with non-conformance; and
- Dealing with expected and unexpected finds.

7.6.9.1 Roles and Responsibility

The Principal Contractor will be responsible for the following:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Implementation and overall management of onsite procedures and protocols defined in the RAP document.
- Responsible for ensuring all subcontractors and consultants employed in reuse material classification generation, movement and placement are adequately briefed in the requirements of the RAP.
- Will take ultimate responsibility for the movement and placement of materials intended for reuse.
- Will ensure clear lines of communication are maintained between all relevant responsible parties.
- Will be responsible for liaison with suppliers in sourcing of materials from offsite, whether imported VENM or material under a NSW EPA exemption.
- Responsible for ensuring the RAP is operated effectively in conjunction with other relevant documents and in line with the overarching Health, Safety and Environmental Plan, Asbestos Management Plan to be developed for the site.

Environmental Consultant will be responsible for the following:

- Liaise with the Principal Contractor with regards to the importation of materials which does not meet the definition of VENM to ensure materials meet the project requirements and to prevent unsuitable materials being inadvertently brought onto the PCPV, such that the site cannot be validated as suitable for proposed permissible uses.
- Undertake inspections when material importation works are being undertaken to confirm materials sampled are consistent with those being imported.
- Review materials tracking documents submitted by the Principal Contractor and investigate/resolve any discrepancies.
- Cross check inspection findings with materials tracking sheets.
- Provide directives (decisions) relating to a proposed and/or placed fill materials suitability.

7.6.9.2 Material Tracking

The movement of classified materials within the site will be controlled by an appropriately managed Materials Tracking System, as discussed below.

In order to minimize double handling on the site, improve cost effectiveness and reduce environmental impacts, every effort should be made to facilitate the movement of excavated or imported material directly to the area of placement.

It is, however, recognized that this objective may not always be practical and hence the following range of potential material movements is anticipated:

- Stockpile to Placement;
- Import to Emplacement;
- Import to Stockpile;
- Stockpile to Stockpile; and
- Offsite disposal.

7.6.9.3 Materials Characterisation Form

All material movements within the site will be controlled using Materials Classification Forms (MCF) and Material Tracking Sheets (MTS).

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Each MCF outlines procedures for confirming material quality, quantity and summarising existing analytical data. The MCF will be completed by the Principal Contractor and/or the Civil Works Contractor and will include the following:

- A unique MCF document name/number;
- A summary of VENM/ENM reports prepared the Environmental Consultant;
- Materials description; and
- Material reuse suitability summary.

Each MCF will be completed and signed off by the Principal Contractor/Civil Works Contractor based on material characterisation reports prepared by Environmental Consultant. Once completed, the MCF will be incorporation into the Principal Contractors materials tracking system prior to placement within the site.

An example of the MCF is presented in **Appendix F**.

7.6.9.4 Materials Tracking Sheet

The MTS is a two-part document which requires information to be collected at the material source location and at one of the three potential destination sites. An example of the MTS is presented in **Appendix D**.

All MTSs will be uniquely referenced and stored as a record of material movements.

This first part (Part A) of the document will record the following data:

i. Time and Date
ii. Truck registration or plant identification;
iii. Load quality; and
iv. MCF reference name/number. The MCF will provide details on items such as a source location reference, visual/olfactory observations, materials classification/reuse zone suitability summary.

The document will also be used for materials required for onsite placement or temporary stored prior to placement and will be completed at the point of unloading. The sheet will record the following details:

- Items i, ii, iii, as above;
- Visual and olfactory observations; and
- Zone of emplacement.

The final portion of the sheet (Part B) will be completed for materials which cannot be used within the site and are scheduled for off-site disposal in accordance with EPA (2014).

Items I, ii, iii and iv above will be recorded initially. The name of the haulage company responsible for transferring the material to the tip site and the details of the receiving site must also be recorded. Prior to leaving the site, the material should have undergone a waste classification in accordance with EPA (2014) and confirmation of this should be acknowledged on the sheet.

Finally, a note should be made of the consignment note number or receipt identification obtained.

The MTS will be reviewed and signed off as completed by the Principal Contractor and or Civil Works Contractor.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

7.6.9.5 Material Placement

Zones (grid references) of material placement will be accurately surveyed. This will allow the interrogation of the data set to ensure reuse material loads have been correctly deposited and a record kept of cumulative loads deposited in any particular zone.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

8. Validation Plan

8.1 Overview

Validation data is required to be collected to verify the effectiveness of the remedial works and document the final site condition as being suitable for the proposed future use(s).

The following sections establish the DQOs to be adopted during validation of the remediation works.

8.2 State the Problem

The site, which has historically been used for commercial/industrial activities, is proposed to be redeveloped for mixed use (residential, public open space and commercial land uses).

Past assessment activities, as summarized in JBS&G (2017 and 2019a) and **Sections 5** to **7**, have identified that, prior to redevelopment, remediation of contamination is required.

During remediation activities, sufficient validation data is required to demonstrate that the identified environmental and health risks to future user(s) of the site have been adequately managed to render the site suitable for the proposed land use.

8.2.1 Identify the Decision

The decisions which are required to be made for validation of the site are:

- Have all VOC impacted soils representing a potential unacceptable human health/ecological risk been successfully treated/removed from the site?
- Where assessment of AEC 2 (former service station), AEC 3 (transformers) and AEC 4 (fill material) have identified residual, localised contamination:
  - Has all petroleum infrastructure and associated contaminated soils representing a potential unacceptable human health/ecological risk under the proposed development scenario been successfully treated/removed from the site?
  - Has all contaminated fill material which represents a potential unacceptable human health/ecological risk with respect to the proposed development scenario been successfully treated/removed from the site?
- Where impacted material which is demonstrated as being environmentally suitable for retention on site under a cap/cover physical separation, have marker layer and physical separation arrangements been installed appropriately and in accordance with RAP requirements?
- Are accessible soils ecologically suitable?
- Are imported soils (where required) ecologically suitable for their proposed use?
- Are offsite concentrations of chlorinated ethenes in groundwater stable or decreasing?
- Is an EMP required to address management of any residual contamination?
- Is the site suitable for the proposed use?

8.2.2 Identify Inputs to the Decision?

Inputs to the decisions are:

- All available site characterisation data collected up to the completion of site validation.
- Field observations in relation to inspection of all excavation bases, walls and stockpiles for odours, sheen, discolouration, and other indicators of potential contamination;
- Ground Penetrating Radar (GPR) survey information;

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Soil and soil-vapour validation analysis data collected from stockpiles and the base and walls of remedial excavations;
- Groundwater validation analytical data collected from monitoring wells installed within and nearby to the site;
- Waste classification and/or material characterisation data obtained during assessment of fill materials/soils;
- Materials tracking records;
- Importation characterisation assessments;
- Disposal dockets and relevant documents in relation to appropriate disposal of material to be removed from site as part of the remediation works (landfill dockets, tank destruction certificates, beneficial reuse/recycling dockets, etc.);
- Survey data in areas of fill retention;
- Survey data as to the extent and thickness of physical separation arrangements and extent of environmentally impacted materials; and
- Data quality indicators as assessed by quality assurance/quality control (QA/QC).

Specifically, sufficient data needs to be collected from each of the identified potentially impacted media (e.g. soils, groundwater and soil-vapour) across the site to demonstrate that the associated COPCs (**Section 7**) have been removed or reduced to an acceptable level.

8.2.3 Define the Study Boundaries

The site comprises 10 legal properties (**Table 3.1**) and occupies an area of approximately 1.87 ha as shown on **Figures 1** to **4**. The study boundary extends north of the site, the final extent of which will be subject to future assessment works, to determine potential offsite migration of impacts. The surrounding land uses of the site is bound by Henry Street, Allen Place, Station Street and Woodriff Street North.

The vertical extent of the works will be the maximum depth from which impacted soils will be excavated/treated.

Validation works will be completed within development timelines to be informed upon development of detailed design proposals.

8.2.4 Develop a Decision Rule

Decision rules are provided following for each of the decisions:

- Have all chlorinated ethene impacted soils representing a potential unacceptable human health/ecological risk been successfully treated/removed from the site?
    - If all chlorinated ethene impacted soils representing an unacceptable risk to future receptors underlying 134-138 and 140 Henry Street have been removed/treated, the removal confirmed by comparison of soil leachate (against screening criteria from ANZAST 2018 95 % and NHMRC 2017 recreational exposure values) and soil-vapour analytical results against the interim soil vapour health investigation levels for volatile organic chlorinated compounds (NEPC 2013) and soils have been disposed of in accordance with EPA waste guidelines or been assessed as suitable for retention following remediation then the decision will be Yes. Otherwise the decision will be No and additional assessment and/or remediation will be required to demonstrate the objectives of the RAP have been achieved;

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Where assessment of AEC 2 (former service station), AEC 3 (transformers) and AEC 4 (fill material) have identified residual, localised contamination:
  - Has all petroleum infrastructure and associated contaminated soils representing a potential unacceptable human health/ecological risk under the proposed development scenario been successfully treated/removed from the site?
    - If all petroleum hydrocarbon contaminated soils have been removed/treated, the removal/treatment confirmed by assessment of residual soil COPC concentrations and the NEPC (2013) criteria, and soils/infrastructure have been disposed of in accordance with EPA waste guidelines or been assessed as suitable for retention following remediation then the decision will be Yes. Otherwise the decision will be No and additional assessment and/or remediation will be required to demonstrate the objectives of the RAP have been achieved;
  - Has all contaminated fill material which represents a potential unacceptable human health/ecological risk with respect to the proposed development scenario been successfully treated/removed from the site?
    - If all contaminated soils have been removed/treated, the removal/treatment confirmed by assessment of residual/treated soil COPC concentrations and the NEPC (2013) criteria, and soils have been disposed of in accordance with EPA waste guidelines or been assessed as suitable for retention following remediation then the decision will be Yes. Otherwise the decision will be No and additional assessment and/or remediation will be required to demonstrate the objectives of the RAP have been achieved;
- Where impacted material which is demonstrated as being environmentally suitable for retention on site under a cap/cover physical separation, have marker layer and physical separation arrangements been installed appropriately and in accordance with RAP requirements?
  - The marker and physical separation arrangements must be installed across the extent of the impacted soils. The marker layer must be installed to the RAP requirements, as well as the manufacturer's installation requirements (**Section 8.2.6**). The vertical and lateral extents of the marker layer must be surveyed, along with consistent and comprehensive photographic evidence.
  - Where soil-based material is to be used for physical separation, placed above the marker layer and readily accessible to human users, this material is required to be validated as meeting the site validation requirements as discussed in **Section 8.7**.
  - All imported materials to be used as the physical separation arrangement must be environmentally suitable, as defined below. Growing media should have levels of constituents consistent with ecological protection criteria for 'urban residential and public open space' as provided to NEPC (2013).
  - If the marker layer and physical separation arrangements have been installed with the requirements of the RAP, then the answer will be Yes. Otherwise the decision will be No and additional assessment and/or remediation is required to demonstrate the objectives of the RAP have been achieved.
- Are accessible soils ecologically suitable?
  - If concentrations of COPCs in soils proposed to be used for establishment of site vegetation are below EIL/ESL criteria, the answer to the decision is yes.
- Are imported soils (where required) ecologically suitable for their proposed use?

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- If imported soils are comprised of VENM or ENM and they are used in accordance with the relevant exemptions, and analyte levels within the soils meet all the adopted ecological and human health criteria (**Section 8.5**) for accessible soils on the site then the decision will be Yes. Otherwise the decision will be No.

- Subsequent to the removal/treatment of chlorinated ethene impacted soils are groundwater chlorinated ethene concentrations stable/decreasing?
  - If an assessment of the attenuation of groundwater VOC concentrations demonstrated by either direct measurement of decreasing concentrations, or stable concentrations and secondary indicators of attenuation, then the answer to the decision was Yes. If No, further remediation/ongoing monitoring may be required to address outstanding contamination issues.
- Subsequent to the removal/treatment of chlorinated ethene impacted soils, and establishment that groundwater chlorinated ethene concentrations are stable/decreasing, do residual offsite concentrations of groundwater represent an unacceptable risk to sensitive downgradient receptors?
  - If assessment of the groundwater (by either site specific risk assessment and/or delineation of the plume extent) indicate that no potentially unacceptable risks are posed to sensitive downgradient receptors, the answer to the decision is No. Otherwise further remediation/ongoing monitoring may be required to address outstanding risks.
- Is an EMP required to address management of any residual potential contamination?
  - Was the answer to any of the above decisions No, or were any contaminated fill materials retained on site below a marker layer? If Yes, the issues are required to be documented within an EMP to be prepared for the site to address outstanding contamination issues. If No, an EMP is not required to be prepared for the site to address outstanding issues.
- Is the site suitable for the proposed use?
  - Was the answer to any of the above decisions No? If No, were the outstanding issues appropriately addressed by implementation of an EMP to the satisfaction of the auditor?
  - If the answer to the first question was Yes, or if the issues were appropriately addressed by an EMP, the answer to the above decision will be Yes. Otherwise, the answer to the decision will be No and additional remediation/management will be required.

8.2.5 Specify Limits of Decision Error

This step is to establish the decision maker's tolerable limits on decision errors, which are used to establish performance goals for limiting uncertainty in the data. Data generated during this project must be appropriate to allow decisions to be made with confidence.

Specific limits for this project have been adopted in accordance with the appropriate guidance from the NSW EPA, NEPC (2013), ANZECC (2000), DEC (2007[20]), appropriate indicators of data quality (DQIs used to assess QA/QC) and standard JBS&G procedures for field sampling and handling.

To assess the usability of the data prior to making decisions, the data will be assessed against pre-determined DQIs for completeness, comparability, representativeness, precision and accuracy.

The pre-determined Data Quality Indicators (DQIs) established for the project are discussed below in relation to precision, accuracy, representativeness, comparability, completeness and sensitivity (PARCCS parameters), and are shown in **Table 9.1**.

[20] *Contaminated Sites: Guidelines for the Assessment and Management of Groundwater Contamination*. NSW Department of Environment and Conservation 2007 (DEC 2007)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- **Precision** - measures the reproducibility of measurements under a given set of conditions. The precision of the laboratory data and sampling techniques is assessed by calculating the Relative Percent Difference (RPD) of duplicate samples.
- **Accuracy** - measures the bias in a measurement system. The accuracy of the laboratory data that are generated during this study is a measure of the closeness of the analytical results obtained by a method to the 'true' value. Accuracy is assessed by reference to the analytical results of laboratory control samples, laboratory spikes and analyses against reference standards.
- **Representativeness** –expresses the degree which sample data accurately and precisely represent a characteristic of a population or an environmental condition. Representativeness is achieved by collecting samples on a representative basis across the site, and by using an adequate number of sample locations to characterise the site to the required accuracy.
- **Comparability** - expresses the confidence with which one data set can be compared with another. This is achieved through maintaining a level of consistency in techniques used to collect samples; ensuring analysing laboratories use consistent analysis techniques and reporting methods.
- **Completeness** – is defined as the percentage of measurements made which are judged to be valid measurements. The completeness goal is set at there being sufficient valid data generated during the study.
- **Sensitivity** – expresses the appropriateness of the chosen laboratory methods, including the limits of reporting, in producing reliable data in relation to the adopted criteria.

If any of the DQIs are not met, further assessment of the data set will be required in order to determine whether the non-conformance has significant effects on the usefulness of the data. Corrective action to correct an adverse impact on the reliability of the dataset may include, but is not limited to, the request of further information from samplers and/or analytical laboratories, downgrading of the quality of the data or alternatively, re-collection of the data.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Table 8.1: Summary of Quality Assurance / Quality Control Program

Data Quality Objectives	Frequency	Data Quality Indicator
Precision		
Blind duplicates (intra laboratory)	1 / 20 samples	<50 % RPD[1], asbestos in agreement
Blind duplicates (inter laboratory)	1 / 20 samples	<50 % RPD[1], asbestos in agreement
Laboratory duplicates	1 / 20 samples	<50 % RPD[1], asbestos in agreement
Accuracy		
Surrogate spikes	All organic samples	70-130 %
Laboratory control samples	1 per lab batch	70-130 %
Matrix spikes	1 per lab batch	70-130 %
Representativeness		
Sampling appropriate for media and analytes		-[2]
Samples extracted and analysed within holding times.	-	Soil: organics (14 days), inorganics (6 months) Groundwater: metals (6 months, other than mercury - 28 days), sVOCs (>C_{10} - 7 days), volatiles (<C_{10} - 14 days) Soil vapour: sorbent tubes VOCs/TRH (28 days)
Trip spike (soil and groundwater only)	1 per sampling event	70-130 % recovery
Storage blank (soil and groundwater only)	1 per sampling event	<LOR
Rinsate blank (soil and groundwater only)	1 per sampling data where reusable equipment is used	<LOR
Method blank (soil vapour only)	1 per lab batch	<LOR
Trip blank (soil vapour only)		
Laboratory blanks	1 per lab batch	<LOR
Comparability		
Standard operating procedures for sample collection & handling	All Samples	All samples[2]
Standard analytical methods used for all analyses	All Samples	All samples[2]
Consistent field conditions, sampling staff and laboratory analysis	All Samples	All samples[2]
Limits of reporting appropriate and consistent	All Samples	All samples[2]
Completeness		
Sample description and COCs completed and appropriate	All Samples	All samples[2]
Appropriate documentation	All Samples	All samples[2]
Satisfactory frequency and result for QC samples	All QA/QC samples	-[2]
Data from critical samples is considered valid	-	Critical samples valid[2]
Sensitivity		
Analytical methods and limits of recovery appropriate for media and adopted site assessment criteria	All Samples	All samples

[1] If the RPD between duplicates is greater than the pre-determined data quality indicator, a judgment will be made as to whether the excess is critical in relation to the validation of the data set or unacceptable sampling error is occurring in the field.

[2] A qualitative assessment of compliance with standard procedures and appropriate sample collection methods will be completed during the DQI compliance assessment.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

8.2.6 Optimise the Design for Obtaining Data

The validation sampling design is summarised for each specific type of validation works as follows.

8.2.6.1 Validation of Chlorinated Ethenes in Soil and Soil-vapour

Soil Excavation Validation (Vapour)

The required remedial excavation extent will be informed by the VSAQP. Validation of the removal of soils with unacceptable levels of chlorinated ethene soil/soil-vapour concentrations will be conducted in accordance with the procedure presented following. Validation of chlorinated ethene impacted soil removal will require demonstration that residual soils do not result in unacceptable contaminated soil-vapour or leachate generation. Action criteria for soils will be derived within the VSAQP and presented in the relevant RWP(s) and shall be based on site development specific considerations: soil characteristics, backfill characteristics, depth of samples below finished levels, anticipated contaminant transformation/attenuation, rainwater infiltration, etc.

Inspection and sampling of excavations following removal of shallow fill will be required to confirm the absence of residual infrastructure or impacted soils which may result in unacceptable soil vapour concentrations. Where residual impact which may result in unacceptable soil-vapour generation remains (identified via visual/olfactory indicators, field screening or laboratory analysis)), these materials will be further chased out prior to backfill.

Field screening for unacceptable soil-vapour generation potential will be completed in accordance with the following methodology:

- Inspection of residual soils exposed on the excavation surfaces to identify visual or olfactory indicators of residual impact;
- Installation of temporary soil vapour probes or shallow soil vapour wells (per procedure presented in **Section 8.5**);
  - 1 temporary soil vapour probe per 5 m of excavation wall, with a minimum of one per wall; and
  - 1 temporary soil vapour probe per 25 m^2 of excavation base, with a minimum of four per excavation.
- Soil sample locations from the walls of excavations formed by the removal of impacted soils at a frequency of one sampler per 5 m of excavation wall, with a minimum of one per wall and 1 per 25 m^2 from the base of the excavation, with a minimum of four samples.

Installed probes shall be left to equilibrate (30 minutes for spear point or similar probes and 24 hours for soil vapour wells, in accordance with NEPC (2013) requirements) and then soil-vapour samples extracted. Soil vapour samples will be extracted from the temporary probes and analysed (either in field by portable gas-chromatography or by laboratory analysis). Determination of excavation extent acceptability will be made based on comparison of residual soil vapour sample concentrations with action criteria derived in the VSAQP and presented in the relevant RWP(s)**.**

Soil and soil-vapour validation will be analysed for concentrations of TRHs and VOCs. Soil samples will be subjected to ASLP and the resulting leachate fluid analysed for concentrations of CEs to assess the potential for leachate generation. Soil-vapour samples will be compared against site validation criteria (i.e. NEPM 2013 HIL-B and HIL-C, **Section 8.7**) and soil leachate generation compared against groundwater screening criteria (i.e. ANZAST (2018) and NHMRC (2017)). Should exceedance of the screening criteria be identified, further assessment and/or remediation will be required.

Validation of Final Site Surface

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Upon backfilling the remedial excavation and establishment of approximate final site levels, the final site-surface vapour concentrations will require validation. It is anticipated that final site levels will comprise exposed soils/garden beds. On that basis, validation will require to be undertaken by installation of either permanent or temporary soil-vapour wells on an approximate 10 m grid across the remedial excavation footprint. The vapour probes shall be installed to target soils no deeper than 1 m below the final site levels.

A minimum of two rounds of soil-vapour sampling will be conducted per the requirements of the VSAQP. Samples of soil-vapour will be withdrawn from each soil vapour well and submitted for laboratory analysis. Determination of remedial success will be based on comparison of laboratory analytical results with validation criteria presented in the VSAQP and relevant RWP(s).

8.2.6.2 Validation of Petroleum Infrastructure Removal (if required)

Inspection of excavations following removal of petroleum infrastructure will require to be completed to confirm the absence of residual impact which may exceed the NEPC (2013) criteria. Where residual impact which may exceed the NEPC (2013) criteria remain (via visual inspection, olfactory detection and/or through the use of a PID assessment), these materials will be further chased out prior to validation sampling.

Subsequent to the removal of the petroleum infrastructure and associated backfill, validation requirements, consistent with NSW EPA (2014[21]) requirements shall include:

- Sample locations from the walls of excavations formed by the removal of USTs/backfill sands at the frequency of one sample per 5 m of excavation wall per identifiable stratum or 1 m in wall depth, with a minimum of one per wall;
- Sample locations from the base of excavations formed by the removal of USTs at the frequency of one sample per 25 m^2, with a minimum of two per former UST location;
- Discrete sample locations under other petroleum infrastructure (i.e. remote fill points, fuel dispensers). In the event that significant impacted soil volumes are removed from these areas, the adopted sampling frequency for excavation bases and walls following UST removal will be adopted; and
- Sample locations at a linear spacing of 5 m underlying pipelines.

Soil samples shall be analysed for TRHs, PAHs, heavy metals and VOCs and compared against NEPM (2013) site validation criteria **Section 8.7**.

8.2.6.3 Validation of Impacted Fill Management (if required)

Where residual fill impacts are identified (AEC 3 and AEC 4), they are required to be either removed or demonstrated as being suitable to remain on the site under the proposed development scenario (above or below a marker layer). Removal of soils is required to be undertaken to the top of unimpacted fill material, natural soils or a depth of 0.5 m where fill is to be capped *in-situ*.

Subsequent to the removal of impacted fill, validation requirements shall include:

- Sample locations from the walls of excavations formed by the removal of soils at the frequency of one sample per 5 m of excavation wall per identifiable stratum, with a minimum of one per wall; and
- Sample locations from the base of excavations formed by the removal of soils at the frequency of one sample per 25 m^2, with a minimum of one per excavation.

[21] *Technical Note: Investigation of Service Station Sites*. NSW EPA April 2014 (EPA 2014)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

8.2.6.4 Installation of the Physical Barrier

Where residual contaminated fill, which exceeds criteria for land use but is determined to be suitable for retention under a cap, is required to be retained on site, installation of physical separation arrangements (within road reserves and landscape areas where fill removal is not possible/practicable) shall be defined by survey as completed by a registered surveyor and/or building as-built drawings sufficient to identify:

- The lateral extent and upper depth height of known environmentally impacted materials (i.e. residual fill materials underlying the cover) within each remediation area/stage;
- The lateral extent and type of cover (e.g. permanent pavement, soil thickness) within the remediation area/stage; and
- Confirmation, by photos or otherwise, of the installation of the 'marker layer' underlying the cover (as required).

Physical separation arrangement requirements (i.e. thickness etc.) are detailed in **Section 7.6.6**.

Validation of installation shall demonstrated by inclusion of the following information in the validation report(s):

- Photographic evidence of marker layer application;
- Survey plans including spot measurements of the upper depth of retained contaminated material, the final height of the cap and the lateral extent of the caped area(s); and
- Material characterisation and importation records to demonstrate that capping materials are environmentally suitable for the relevant purposes.

It is anticipated the following materials will be used within the road reserves and across the broader site:

Growing Media

Soils to be imported and used as growing media within the site shall be sampled at a rate of at least one sample per 100 m^3 with a minimum of three samples per source/end location. Samples shall be analysed for TRH, PAHs, heavy metals, (including As, Cd, Cr, Cu, Pb, Hg, Ni and Zn), OCPs, PCBs, asbestos, soil pH and CEC. The materials shall be further inspected for any aesthetic indicators of contamination.

Site sourced natural soils shall be analysed for heavy metals, TRH, VOCs, OCPs, PCBs, pH and CEC. In addition, assessment of the potential presence of aesthetic issues, including staining, discolouration and/or odorous soil conditions will be completed.

Visual inspection is required by the Environmental Consultant during placement to confirm the material is consistent with the material sampled at the source site. Copies of classification certificates and importation records are required to be kept for inclusion in the validation report(s)

VENM

VENM shall be as defined under the *Protection of the Environment Operations (POEO) Act 1997* and characterised by at least five samples per source site and one per 1 000 m^3 being collected if more than 10 000 m^3. Visual inspection is required by the Environmental Consultant at the source site to confirm the material is consistent with the definition of VENM. Copies of VENM certificates and importation records are required to be kept for inclusion in the validation report(s)

ENM

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Sampling and analysis is required to be undertaken as per the exemption (EPA 2014c[22]).

Visual inspection is required by the Environmental Consultant during placement to confirm the material is consistent with the material sampled at the source site. Copies of ENM certificates and importation records are required to be kept for inclusion in the validation report(s)All ENM samples are required to be assessed for the presence of asbestos in addition to the requirements of the ENM analytical suite (EPA 2014c)

Recycled Products

Sampling of materials as per an EPA exemption is required to be undertaken by the facility in accordance with the exemption. In addition, where materials are proposed for beneficial reuse under a NSW EPA exemption (i.e. imported to the site), fill material will need to be further assessed by The Environmental Consultant for land use suitability. Sampling densities and analysis for COPC will be dependent on the volume, material type, source and subject to Site Auditor endorsement. All samples are required to be submitted for analysis of asbestos in addition to other relevant COPCs.

8.2.6.5 Materials Classification for Offsite Disposal

Materials sampled for waste classification in accordance with EPA (2014a) shall be sampled at an appropriate rate to characterise the materials. Stockpiles will be sampled in accordance with NEPC (2013). If the stockpile is greater than 200 m^3 the sampling rate shall be determined by the Field Scientist on the basis of the volume of materials and any potential heterogeneity occurring within the materials.

Sampling of materials as per the ENM exemption (or similar) requires to be undertaken in accordance with the exemption.

Sampling of site materials as per a VENM classification will require the collection of at least 10 samples with one per 1 000 m^3 being collected if more than 10 000 m^3 has been removed.

Sampling of materials as per an EPA exemption is required to be undertaken by the receiving facility in accordance with the exemption. In addition, where materials are proposed for beneficial reuse under a NSW EPA exemption (i.e. imported to the site), fill material will need to be further assessed by The Environmental Consultant for land use suitability. Sampling densities and analysis for COPC will be dependent on the volume, material type, source and subject to Site Auditor endorsement.

8.2.6.6 Confirmation of Hydrocarbon Removal from Soils

All petroleum hydrocarbon impacted soils to be treated on site (refer to **Section 7.6.5**), will be sampled at a density of one sample per 70 m^3 (minimum three samples per stockpile) and submitted for relevant COPCs (**Table 8.2**).

The successful treatment of CE impacted materials will be informed by field screening of soil vapour levels within treated stockpiles. A temporary soil vapour probe will be driven 1 m into discrete stockpiles of material with a maximum volume of 50 m^3. A soil vapour sample will be withdrawn from the stockpile after an equilibration period of 30 minutes, and assessed either in the field by portable gas-chromatography or by laboratory analysis. Specific action criteria for CE impacted stockpile remediation will be derived in the VSAQP and presented in the relevant RWP(s).

Where soil-vapour criteria have been satisfied, the stockpiles will be sampled and analysed for the presence of soil-bound CEs. A minimum of three soil samples are required to be collected from at least 200 mm below the stockpile surface. If detections of soil-bound CEs are identified, subsequent leachate analysis will be conducted to determine whether the CEs present a potential groundwater

[22] *The Excavated Natural Material Order 2014*. NSW EPA dated 24 November 2014, NSW EPA 2014b

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

migration risk. Determination of suitability to be retained on site will be made by comparison of leachate data against criteria presented in **Section 8.7** (i.e. ANZAST (2018) and NHMRC (2017)).

8.2.6.7 Validation of Groundwater Impact Attenuation

At the commencement of soil remediation at 134-138 and 140 Henry Street, concentrations of VOCs in groundwater shall be monitored via groundwater monitoring events conducted on offsite wells existing (JBMW01, JMBW02, JBMW03, JBMW05, JBMW06 and JBMW07) biannually. Monitoring of offsite groundwater VOC concentrations will continue for a minimum of four sampling events or until stable/decreasing concentrations are determined by a statistical assessment using the Mann-Kendall test).

Groundwater validation samples will be assessed to the ANZAST (2018) and NHMRC (2017) validation criteria.

8.2.6.8 Validation of Groundwater Offsite Migration Risk

Sufficient assessment will be required to demonstrate that offsite groundwater impacts do not present an unacceptable risk to downgradient receptors. This may comprise risk based determination that identified concentrations do not represent an unacceptable risk at the receiving water body and/or nearby building basements or complete delineation of the CE plume.

As a minimum, confirmation of the groundwater flow direction and review of groundwater concentrations following validation of groundwater impact attenuation (**Section 8.2.6.7**). Further installation and sampling of groundwater monitoring wells may be required as part of this works, the details of which shall be confirmed following detailed development designs and included in future RWP(s).

8.2.6.9 Sampling Frequency

Table 8.2 summarises the required validation sampling frequencies

8.3 Soil Sampling Methodology

The soil sampling method shall be determined by the Field Scientist as consistent with the observations of the site sub-surface and appropriate to generate representative samples. The soil sampling method shall be consistent with the data quality indicators in **Section 8.2.5**.

Where sample locations are placed by boreholes, undisturbed samples, as collected by push tube or SPT sampler, are preferred where able to be effectively implemented. Otherwise samples may be recovered from solid flight augers or via use of an excavator/hand tools. Re-usable equipment shall require to be decontaminated between sampling locations.

8.3.1 Soil Sample Containers

During the collection of soil samples, features such as seepage, discolouration, staining, odours and other indications of contamination shall be noted on field reporting sheets/field logs.

Collected soil samples shall be immediately transferred to sample containers of appropriate composition (glass jars) fitted with Teflon sealed lids. 500 mL samples shall be additionally collected and placed in new zip lock bags where asbestos analysis is required. Sample labels shall record sample identification number and date and time of sampling. Sample containers shall be transferred to a chilled ice box for sample preservation prior to and during shipment to the testing laboratory. A chain-of-custody form shall be completed and forwarded with the samples to the testing laboratory, containing the following information:

- Sample identification;
- Signature of sampler;
- Date of collection;
- Type of sample;
- Number and type of container;
- Inclusive dates of possession; and
- Signature of receiver.

8.3.2 PID Screening

Soil samples will be screened during field works using a PID to assess the potential presence of VOCs including petroleum hydrocarbons. Samples obtained for PID screening will be placed in a sealed plastic bag for approximately 5 minutes to equilibrate, prior to a PID being attached to the bag. Readings will then be monitored for a period of approximately 30 seconds or until values stabilise and the stable/highest reading will be recorded on the field sample forms. The PID will be calibrated prior to the commencement of field works and then check readings will be completed on a daily basis during the field program using suitable calibration gas. If required, the PID will be re-calibrated during the field program in accordance with manufacturer's instructions.

A GC-PID will be used to analyse gas samples on the site for concentrations of specific CEs. The GC-PID will be calibrated against gas standards and will offer real time screening of soil-vapour impacts to assist in advancement of the remedial excavation. The specific action criteria for PID screening shall be detailed in a Vapour Validation Sampling, Analysis and Quality Plan (VSAQP) issued prior to or as part of the stage specific RWPs or separately to the site auditor.

8.4 Groundwater Sampling Methodology

Groundwater wells will be inspected prior to sampling to ascertain their condition and determine whether they're suitable for sampling. If the presence of excessive sediment is identified the wells should be purged and allowed to settle for a minimum of 5 days prior to sampling.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Each monitoring well will be gauged with an Interface Probe (IP) which can detect NAPLs. The groundwater at each well will then be purged with a QED low flow/micropurge submersible bladder pump, using fresh disposable bladders and low-density polyethylene tubing, to remove the standing water. During removal, physiochemical parameters (pH, electrical conductivity, dissolved oxygen, reduction-oxidation potential and temperature) will be monitored until stabilisation, consistent with the requirements of VIC EPA (2000[23]). Groundwater samples will be taken from the end of the disposable LDPE tubing after parameter stabilisation has occurred.

Collected groundwater samples will be immediately filtered (as necessary) and transferred to laboratory supplied sample bottles. The sample containers will be transferred to a chilled iced box for sample preservation prior to and during shipment to the testing laboratory. A chain of custody form will be completed and forwarded with the samples. Samples will be analysed in accordance with the laboratory schedule (**Table 7.3**).

8.5 Soil-vapour Assessment

8.5.1 Temporary Soil Vapour Probe and Soil Vapour Well Installation

Temporary probes and soil-vapour wells are required to be installed to a minimum depth, or penetration if installed into excavation walls, of 1.0 m.

Temporary Soil Vapour Probes

temporary soil vapour probe will be directly driven into the face of exposed soils at the excavation base or walls to the required penetration depth, either by hand or mechanically assisted, and allowed to sit for a minimum of 30 minutes prior to sampling. The probes may be withdrawn and reused subject to appropriate decontamination.

Stockpiles requiring soil-vapour assay will be assessed via spear probes.

Soil Vapour Wells

Where soil-vapour wells are to be used, boreholes will be advanced via hand auger or drill rig. 6 mm nylon tubing with a stainless steel tip will be installed to the depth of the borehole, which will then be backfilled with graded sand adjoining the base of the sample tube, overlain by a nominal thickness of powdered bentonite, and backfilled with grout/bentonite chips to create an air-tight seal at the surface. Soil-vapour wills will be left to equilibrate for a period of 24 hours prior to sampling.

8.5.2 Soil-vapour Sampling

PID screening will be utilised to screen for residual volatile impacts within remedial excavations and treated soils. Samples will be obtained via installation of temporary 'spear probes' or soil-vapour wells. Once the probes/wells have equilibrated for the required period (30 minutes for spear probes and 24 hours for vapour wells), the PID will be attached to sample tubing for a period of approximately 30 seconds or until values stabilise and the stable/highest reading will be recorded on the field sample forms.

Soil-vapour will be sampled in accordance with the following methodology:

- A multi-gas meter will then be used to purge each probe for a period of at least 5 mins. Gas readings will be monitored until oxygen and PID readings stabilise;
- Following this a leak detection evaluation will be completed via placement of an isopropyl alcohol-soaked rag over the top of the backfilled borehole to assess the potential occurrence of leaks whilst the gas detector is purging the sample point. Elevated PID readings on the

[23] *Groundwater Sampling Guidelines*. Victoria Environment Protection Authority, April 2000, VIC EPA (2000);

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

gas detector will indicate a leaking probe. Any leaking probes will be required to be reinstalled and re-checked prior to sampling using the same method;

- Attach via use of silicon a carbon tube to the exposed temporary soil vapour probe tubing;
- Attach a calibrated low-flow pump (<0.2 L/min) to the carbon tube using additional section of 6mm Teflon tubing as required;
- Withdraw sufficient soil gas over the carbon tube to ensure required detection limits are met for relevant COPCs and submit tubes for analysis as per **Section 8.7**.

8.6 Laboratory Analysis

NATA accredited laboratories shall be used for all analysis of samples. Appropriate methods and LORs are required for comparison to relevant criteria. Laboratory methods and LORs are presented in **Table 8.2** below.

Table 8.3: Soil Laboratory Analysis Methods (all units in mg/kg)

8.7 Validation Criteria

Determination that remediation of the site has been achieved will be completed in accordance with the validation criteria set below. Based on the proposed development details, in accordance with the decision process for assessment of urban redevelopment sites (EPA 2017) concentrations of contaminants in media shall be compared against relevant criteria presented in **Tables 8.6, 8.7** and **8.8** sourced from the regulatory guidance listed below.:

In addition to site media contaminant concentrations, the Environmental Consultant will require to consider the circumstances which would trigger an assessment of aesthetics in accordance with NEPC (2013) throughout remediation. Where the triggers are satisfied, aesthetic issues which trigger the requirement for assessment shall be considered by the Environmental Consultant and any further remediation/management requirements identified to the Remediation Contractor

Soil Validation Criteria

- Health based Investigation Levels (HILs) for residential with limited access to soils (HIL-B), recreational and public open space (HIL-C) and commercial/industrial land use (HIL-D) – NEPC (2013);
- Health Screening Levels (HSLs), both fine and coarse-grained soils, for petroleum hydrocarbons considering potential for vapour intrusion – NEPC (2013);
- As a conservative measure, generic and site specific ecological investigation levels (EILs) were derived through the added contaminant limits;
- Management Limits for TRH, both fine and coarse-grained soils, for residential/public open space and commercial/industrial land use – NEPC (2013); and
- Ecological Screening Levels (ESLs) for TRH fractions, BTEX and benzo(a)pyrene, both fine and coarse-grained soil, for residential/public open space and commercial/industrial land uses – (NEPC 2013);

Groundwater/Leachate Criteria

- Recreational Health and aesthetics-based criteria adopted from the *Australian Drinking Water Guidelines* – NHMRC (2017);
- Groundwater HSLs, both fine and coarse-grained soils for petroleum hydrocarbons considering potential for vapour intrusion – NEPC (2013); and
- 95 % protection of freshwater aquatic ecosystems from the *Australian and New Zealand Guidelines for Fresh and Marine Water Quality* – ANZAST (2018);

Soil-vapour Criteria

- Interim Soil-vapour Health Investigation Levels for Volatile Organic Chlorinated Compounds – NEPC (2013); and
- Soil Vapour HSLs for Vapour Intrusion – NEPC (2013).

Where there are no NSW EPA endorsed thresholds the laboratory LOR has been adopted as an initial screening value for the purposes of this assessment.

The specific requirements for this assessment shall be detailed in a the VVSAQP, either included within the stage specific RWPs or to be issued separately, to the Site Auditor subsequent to delineation of soil-vapour impact. The RWPs/VVSAQP will include PID action criteria to guide field screening assessment

Notes:

[1.] Guideline values presented are for Chromium (VI) in absence of total Chromium values. Where total Chromium results are elevated, samples will be analysed for Chromium (VI).

[2.] Guideline values are for inorganic mercury. Where elevated mercury concentrations are encountered and/or site information suggests the potential presence of elemental mercury and/or methyl mercury, consideration of applicability would be needed.

[3.] Carcinogenic PAHs calculated as per Benzo(a)pyrene Toxicity Equivalent Factor requirements presented in NEPC (2013)

[4.] Total PAHs calculated as per requirements presented in NEPC (2013).

[5.] Management Limits are based on coarse grained soil, with F1 and F2 concentrations inclusive of naphthalene and BTEX compounds. Management limits will only apply where long-term containment of impacted material is proposed.

[6.] Soil Health Screening Levels for Vapour Intrusion: Coarse Soils. Values presented are those for 0 to <1 m bgl as the most conservative level. Reference should be made to results tables for further detail of levels at greater depths. NL: Non-limiting.

[7.] Values for F1 C_6-C_9 are obtained by subtracting BTEX (Sum) from laboratory result for C_6-C_9 TRH.

8.7.1 Application of Soil Assessment Criteria

For soils proposed to be retained *in-situ* they are required to meet soil validation criteria. Soil validation criteria will apply to all soils proposed to be left at the site. The specific criteria for soils will depend on the ultimate placement location (within the proposed park, publicly accessible areas or within the high-density residential/commercial precinct) and whether any separation is proposed (above or below the marker layer) as per the following. It is noted that the following criteria are based on the anticipated site uses, where ground floor residential and/or sensitive commercial land uses (childcare centres) are proposed, more stringent soil assessment criteria may be required and should be stipulated in the relevant RWP(s).

- Soils validated *in-situ* or placed within the proposed park / green spaces are to be assessed against HIL/HSL-C, ecological and management limit validation criteria for recreational / public open space land uses;
- Soils validated *in-situ* or placed within the future commercial / residential precinct are to be assessed against HIL/HSL-D, ecological and management limit validation criteria for residential and commercial/industrial land uses.

Where elevated concentrations (exceeding investigation/screening levels presented in **Table 8.6** and **8.6**) of potentially leachable and/or volatile contaminants are identified, either further remediation of soils will be undertaken or subsequent assessment of for potential groundwater and soil-vapour generation is required:

- Elevated concentrations of potentially leachable contaminants in soils: samples with the highest reported concentrations are required to be submitted for Australian Standard Leachate Procedure (ASLP) and the resulting leachate analysed for concentrations of the identified contaminants. Leachate results will be screened against groundwater assessment criteria; and
- Elevated concentrations of volatile contaminants in soils: soil-vapour assessment is required to be completed on the residual soils in accordance with the methodology discussed in **Section 8.3.2**.

Where impacted soils are retained under a cap/cover, they are required to be assessed for potential groundwater and soil-vapour generation per the above procedure.

<u>Statistical Assessment</u>

For soils to be considered as having met the assessment criteria (i.e., not posing an unacceptable risk), the following assessment will be made:

Either:

- All contaminant concentrations were less than the adopted site assessment criteria,

Or:

- The upper 95 % confidence limit on the average concentration for each analyte (calculated for samples collected from consistent soil horizons, stratigraphy or material types) was below the adopted criterion;
- No single analyte concentration exceeded 250 % of the adopted criterion; and
- The standard deviation of the results was less than 50 % of the criterion.

In addition to the numerical criteria, the following visual observations will also supplemented the assessment process:

- No visible asbestos containing material in addition to laboratory analysis results; and

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Consideration was given to odorous or discoloured soils (caused by contamination).

8.7.2 Material Characterisation for Off-site Disposal

Where contaminated fill/soil is not suitable for onsite management or is surplus to construction requirements, materials are proposed to be remediated by off-site removal and disposal. Materials shall be classified in accordance with EPA (2014) *Waste Classification Guidelines* or an appropriate exemption as created under the *Protection of the Environment Operations (Waste) Regulation 2014*.

Given the identification of ash and slag inclusions in fill material samples with elevated total PAH and metal concentrations, the ash and slag inclusions are concluded to be a significant source of these contaminants. On this basis, it is appropriate to apply the associated NSW EPA general immobilisation approvals (EPA 1999[24] and EPA 2009[25]) when consideration is given to evaluating a waste classification(s) for material required to be excavated during the remedial works.

Material will require to be removed to a facility lawfully able to receive it.

8.7.3 Imported Materials

In accordance with current EPA policy, only material that does not represent an environmental or health risk at the receiving site may be considered for resource recovery. Imported materials will only be accepted to the site if they meet the restrictions placed on these materials and meet the definition of:

- Virgin Excavated Natural Material (VENM) as defined in the *Protection of the Environment Operations Act* (1997) Schedule 1;
- Excavated Natural Material (ENM) as defined in EPA (2014); or
- Recycled materials as per an EPA exemption.

All materials imported onto the site are required to be accompanied by appropriate documentation that has been verified by the appointed site contamination (environmental) consultant.

Sampling of materials as per an EPA exemption (recycled products) is required to be undertaken by the facility in accordance with the exemption. In addition, where materials are proposed for beneficial reuse under a NSW EPA exemption (i.e. imported to the site), fill material will need to be further assessed by The Environmental Consultant for land use suitability. Sampling densities and analysis for COPC will be dependent on the volume, material type, source and subject to Site Auditor endorsement.

8.7.4 Validation of Soil Placement Areas

Soils which are to be moved to another area of the site will be subject to the following data recording process for future reference purposes, and detailed in the MTP:

- A location plan of the placed materials with co-ordinates based on an agreed grid system (e.g., GPS or relative to the lot boundaries);
- The levels in m AHD of the base of the placement location(s) prior to the material placement;
- The levels in m AHD of the placement locations once all materials have been placed;
- The levels in m AHD of any defining layers; and

[24] *General Approval of the Immobilisation of Contaminants in Waste – Ash and Coal*. EPA 1999
[25] *General Approval of the Immobilisation of Contaminants in Waste – Metalurgical Furnace Slag*. EPA 2009

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Subsequently the total placed volume of materials.

8.7.5 Validation of Physical Separation

Qualitative review of documentation pertaining to the physical separation arrangements employed at the site will be undertaken to determine suitability for the intended purpose. Documentation will require to demonstrate, at minimum, the items identified in **Section 8.2.6.5.**

8.8 Reporting

At the completion of site remediation works, a validation report will be prepared in general accordance with EPA (2017) and OEH (2011) *Guidelines for Consultants Reporting on Contaminated Site*, documenting the works as completed.

This report will contain information including:

- Details of the area of the site which is subject to the validation assessment;
- Details of the remediation works conducted;
- Information demonstrating that the objectives of this RAP have been achieved, in particular the validation sample results and assessment of the data against both the pre-defined DQO and the remediation acceptance (validation) criteria;
- Clear statement that the remedial/validation works have been completed in accordance with the requirements of the RWP(s) and VSAQP;
- Information demonstrating compliance with appropriate regulations and guidelines;
- Any variations to the strategy undertaken during the implementation of the remedial works;
- Results of all environmental monitoring undertaken during the course of the remedial works;
- Details of any environmental incidents occurring during the course of the remedial works and the actions undertaken in response to these incidents;
- Verification of regulatory compliance;
- Details on waste classification, tracking and off-site disposal including landfill dockets;
- Clear statement of the suitability of the portion of the site which is the subject of the validation report, for the proposed use(s);
- Material tracking records which demonstrate that materials imported onsite and dispose offsite have been moved in accordance with relevant regulatory requirements; and
- Other information as appropriate, including details of EMPs (if required) that will apply to the part of the site that is the subject of the validation report.

The report will serve to document the remediation works for future reference.

Given the anticipated staged nature of site remediation, reporting, including preparation of RWP(s), EMP(s) and validation report(s) will also be staged.

8.9 Environmental Management Plan

Should validation of the site, or part thereof, identify that impacted material will remain upon completion of the works, collected data will be assessed in relation to the potential for implementation of an EMP for ongoing management of contamination risks. As per the DQO decision rule processes discussed in **Section 8**, the presence of soil impacted by contaminants of concern above the site criteria may trigger the requirement for an ongoing EMP.

Where required, the EMP shall contain the following elements:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- A statement of the objectives of the EMP – i.e., to ensure continued suitability of the site after it has been remediated;
- Identification of residual environmental contamination issues at the site that require ongoing management/monitoring to meet the EMP objectives, including the type of contamination and location within the site (including survey plans);
- Documentation of environmental management measures which have been implemented to address the identified environmental issues at within the site;
- Description of management controls to limit the exposure of the site users to known areas of contamination to acceptable levels;
- Description of responsibilities for implementing various elements of the provisions contained in the EMP;
- Timeframes for implementing the various control/monitoring, etc. elements outlined in the EMP;
- Environmental monitoring and reporting requirements (if required) for the future management of environmental impact underlying the site including:
    - Appropriate monitoring locations and depth within and down-gradient of any residual contamination;
    - Relevant assessment criteria to be used in evaluating monitoring results;
    - Frequency of monitoring and reporting;
    - Process for reviewing monitoring data and how decisions will be made regarding the ongoing management strategy;
    - The length of time for which monitoring is expected to continue;
    - The regulatory authorities involved and the management inputs required from each;
    - The integration of environmental management and monitoring measures for soil and groundwater;
    - Health and safety requirements for particular activities;
    - A program of review and audits;
    - The provisions in the EMP are feasible (i.e., able to be implemented) and able to be legally enforceable (i.e., a mechanism exists, such as development consent conditions, to give the plan a basis in law); and
    - The relevant consent authority is satisfied that the inclusion of a development consent condition relating to the implementation of the EMP is acceptable;
- Corrective action procedures to be implemented where EMP assessment criteria are breached.

The EMP will be provided to the appointed Site Auditor for review and approval prior to preparation of the SAS and SAR.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

9. Contingency Plan

A review of the proposed contamination-related aspects of the works associated with development the site has been undertaken and has identified a number of potential risks, outlined in the following sections that required the development of contingencies to ensure that the objectives of this RAP are met.

The Contingency Plan is required to be part of the REMP, as described in **Section 10**, below, and part of the Work Health and Safety Plan (WHSP), as described in **Section 10**.

9.1 Unexpected Finds

The possibility exists for hazards that have not been identified to date to be present within fill materials or underlying pavements/building on the site. The nature of hazards which may be present and which may be discovered at the site are generally detectable through visual or olfactory means, for example:

- The presence of significant aggregates of friable asbestos materials (visible) as opposed to minor occurrences of fragments or fibre bundles in soil; and/or
- Excessive quantities of Construction/Demolition Waste (visible); and/or
- Hydrocarbon impacted materials (visible/odorous); and/or
- Drums, waste pits, former pipework or USTs (visible); and/or
- Oily Ash and/or oily slag contaminated soils/fill materials (visible/odorous); and/or
- Tarry like impacted soil/fill material (visible/odorous); and/or
- Potential chlorinated hydrocarbon impact (sweet odour soils).

As a precautionary measure to ensure the protection of the workforce and surrounding community, should any of the abovementioned substances (or any other unexpected potentially hazardous substance) be identified, the procedure summarised in **Figure 9.1** is to be followed.

An enlarged version of the Unexpected Finds Protocol, suitable for use on the site, should be posted in the Site Office and referred to during the site-specific induction by the Principal Contractor.

The sampling strategy for each “unexpected find” shall be designed by a suitably qualified environmental consultant. The strategy will, however, be aimed at determining the nature of the substance – that is, is it hazardous and, if so, is it at concentrations which pose an unacceptable risk to human health or the environment.

The sampling frequency of the identified substance/materials shall meet the minimum requirements outlined in EPA (1995) in addition to those outlined in **Section 8**.

9.1.1 Change in Development Plans

In the event that the development plans are changed from those available at the time of preparation of this RAP, particularly where changes in nominated land use, basements to intercept impacted groundwater or beneficial reuse of groundwater, consideration of the suitability of the proposed remedial strategy will be required.

Development plans should be reviewed in detail to identify any inconsistencies with the assumptions presented herein, and those inconsistencies addressed in site-specific RWPs, as discussed in **Section 10.1**.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

9.1.2 Identification of Additional Underground Storage Tank

There is the potential that one or more additional USTs may be encountered during demolition of the pavements or subsequent earthworks. In the event of such an occurrence, the Unexpected Finds Protocol as discussed below (**Figure 9.1**) will be implemented.

9.1.3 Identification of Oily or Tarry Materials

In the event that oily/tarry materials are encountered, the provisions outlined in the Unexpected Finds Protocol will be implemented, comprising inspection, testing and appropriate action as advised by the Field Scientist (**Figure 9.1**).

Any suspected oily/tarry materials must be segregated from other excavated materials and placed in a designated area with appropriate odour and sediment controls until such time as appropriate assessment is completed and a methodology is confirmed for their appropriate management. In the event that the oily/tarry materials do not meet the site validation criteria, then they shall be stored in a secure area for later treatment or classified and removed from the site for treatment and/or disposal at an appropriately licensed facility.

9.1.4 Identification of Chlorinated Hydrocarbon Impact

In the event that chlorinated hydrocarbon impacted materials are encountered outside of the remedial area presented in **Figure 6** (potentially as a result of the identification of sweet odours in soils), the provisions outlined in the Unexpected Finds Protocol will be implemented, comprising inspection, testing and appropriate action as advised by the Field Scientist (**Section 9.1**).

Any suspected chlorinated hydrocarbon impacted materials must be segregated from other excavated materials and placed in a designated area with appropriate odour and sediment controls until such time as appropriate assessment is completed and a methodology is confirmed for their management. In the event that the materials do not meet the site validation criteria, then they shall be stored in a secure area for later treatment or classified and removed from the site for treatment and/or disposal at an appropriately licensed facility.

9.1.5 Material Storage Breach

In the event that any materials storage containment controls are breached and stockpiled materials classified as asbestos contaminated soil or otherwise have escaped (or have the potential to escape), then the management controls shall be rectified and investigations undertaken to review the adequacy of the controls and any improvements implemented. The REMP (**Section 10**) shall include a documented process for identifying and responding to such incidents.

9.1.6 Emissions Complaints

Due to the nature of the activities and type of contaminants identified within the site, there is a potential for complaints to be received from members of the public and/or occupants of surrounding properties relating to environmental emissions including:

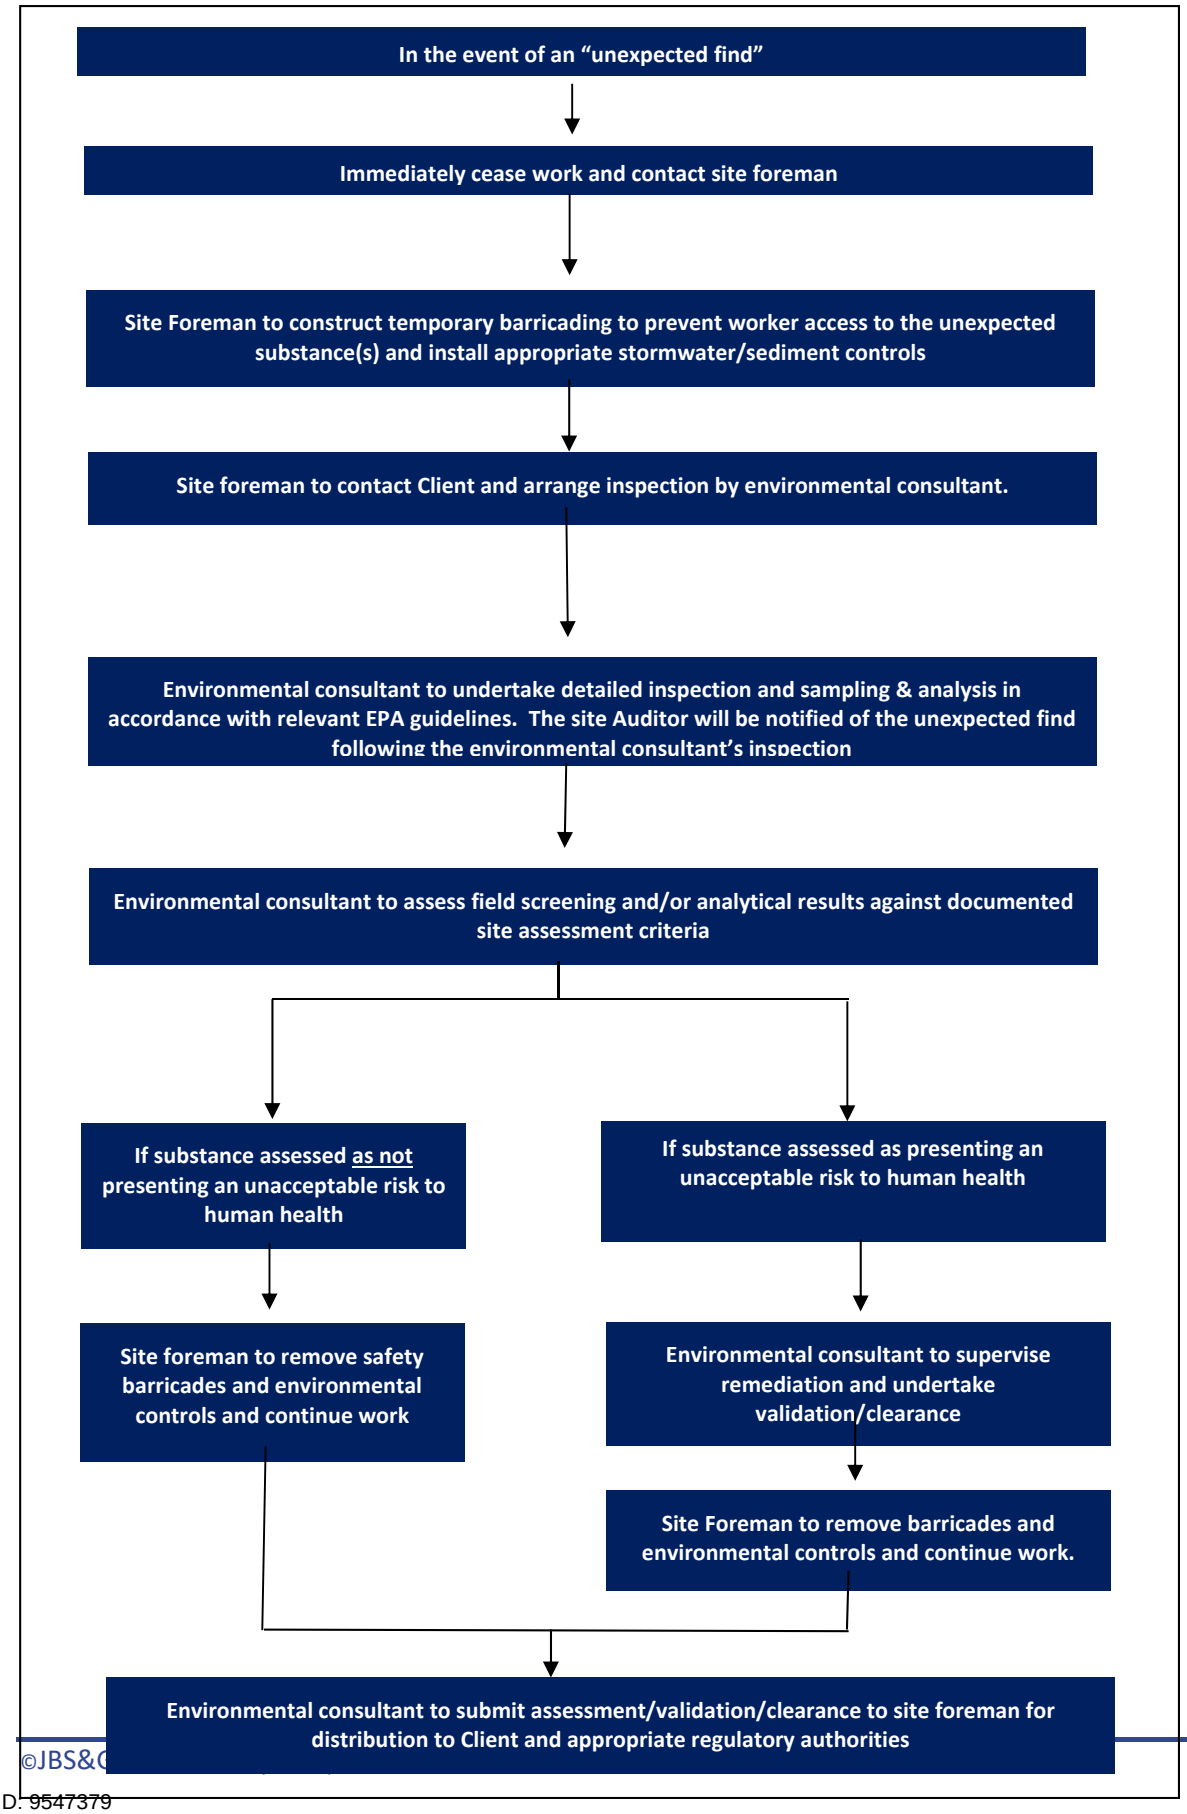
- Odour emissions arising from handling of malodorous soil;
- Noise and vibration arising from excavation, piling and other works;
- Dust emissions arising from excavation, material handling and placement; and
- Visibly impacted water quality in surface water discharge from the site.

Monitoring of all environmental emissions shall be undertaken during the works as detailed in the REMP (discussed in **Section 10**) and appropriate actions taken to further control emissions following receipt of a complaint. The REMP shall contain provision for contingency actions where excessive emissions occur, however it is anticipated that one or more of the following actions will be considered:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Increased application of odour screening/masking chemicals on odorous materials;
- Disturbance of soils during meteorologically favourable periods only; and/or
- Covering of impacted soils.

Figure 9.1 - Unexpected Finds Protocol



Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

10. Other Remediation Documents

10.1 Remedial Works Plans

As the proposed redevelopment / remediation staging becomes available, stage specific RWPs are required to be prepared. The RWPs will document the stage specific development details and identify any outstanding data gaps which are required to be addressed prior to implementation of the RWP. The RWPs will at least require:

- Identification of areas requiring additional environmental assessment including:
  - The extent of the area;
  - The required assessment method and proposed sampling locations (if appropriate);
  - Constituents of potential concern; and
  - Data quality objectives for validation of the area.
- Identification of areas requiring containment and proposed method of containment;
- Identification of areas of known / potential petroleum hydrocarbon impact and proposed remediation / treatment / disposal method;
- Validation methods and requirements for implementation of capping and treatment of petroleum hydrocarbon impacted soils;
- An UFP;
- An environmental management plan (EMP) to control potential emissions from remediation works. This should be particularly cognisant of particulates with elevated levels of PAHs and asbestos fibres;
- A Work Health and Safety Plan (WHSP) to be applied during the course of the remedial works to assess potential health and safety risks, appropriate measures to mitigate these risks and associated monitoring to assess actual risks;
- A Community Consultation Plan to notify all stakeholders including occupiers of neighbouring properties of the activities on the site; and
- The requirements for any long term/ongoing Environmental Management Plans to be applied long term after the completion of remediation / management works. Identification of the requirement, and associated validation, of any materials to be imported to/exported from site.

10.2 Environmental Management

10.2.1 Preparation of a Remediation Environmental Management Plan

Prior to commencement of remediation works, a REMP shall be prepared by the Principal Contractor or the Principal Contractors Remediation Contractor, which documents the environmental monitoring and management measures required to be implemented during the remediation and construction related activities associated with the construction of the site.

The REMP shall address each of the nominated items in **Section 10.2.2** and shall include the Contingency Plan, referred to in **Section 9**, above. Additional environmental management requirements may be required as part of development consent.

10.2.2 Required Elements/Procedures

An assessment of the proposed activities and the associated elements required to be incorporated into the REMP is provided in **Table 10.1**. The REMP is required to address each of the required

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

elements and procedures in full detail and to include detailed monitoring processes and procedures, corrective actions and reporting requirements.

Table 10.1 Required Elements of the REMP

Element	Specific Minimum Requirements to be included in REMP
1. Dust and Airborne Hazard Control	Dust and asbestos air monitoring. Provisions for dust control based on monitoring results.
2. Flora and Fauna	As appropriate.
3. Heritage/Archaeological	In accordance with relevant heritage/archaeological studies.
4. Visual Impacts	Visual monitoring at site boundary Specific colour requirements for various controls/measures, including PPE (e.g., navy coveralls)
5. Emergency Response	As appropriate. Procedures required for spill incident response including material storage breach.
6. Noise Control	Hours of operation, consistent with the consent conditions. Boundary monitoring at commencement of work site activities with Procedures for control and management of noise emissions, as appropriate (e.g., restricted hours).
7. Traffic	Controls on vehicle movements on public roads. Controls on transport of tar impacted materials.
8. Protection of Adjoining Structures	As appropriate.
9. Odour Control and Volatile Contaminant Exposure	Management of all potential gaseous phase volatile contaminant generating activities (i.e., excavation of VOC contaminated soils and treatment) with appropriate vapour controls incorporating safeguards and monitoring. Daily monitoring of odour levels at site boundary during handling of malodorous materials. Procedures for addressing elevated odour monitoring results, including, but not limited to: reduction in earthworks activities within odorous material areas during adverse meteorological conditions; application of odour masking solutions at the odour source or between identified source(s) and receptor(s); review of bio-pile operation and covering identified potential odour sources by hydro-mulching or with less odorous materials.
10. Handling of Contaminated Soil and Groundwater	Soil and water management (stockpiling, site access, excavation pump out, reinstatement).
11. Soil Storage/Placement Areas	Soil and water management (stockpiling, site access, excavation pump out, reinstatement). Bunding. Heavy vehicle/personnel decontamination. Interim storage requirements for materials requiring later treatment. Site drainage requirements, incorporating clean/dirty areas and modifications to existing surface water and drainage controls beneath retained pavements. Monitoring as required.
12. Sediment Control	Bunding. Collection/treatment/handling impacted sediments.
13. Operation of Site Office	As appropriate.
14. Decontamination of Heavy Equipment	As appropriate.
15. Environmental Monitoring	Monitoring of dusts, noise, odour and fibres. Monitoring as required for vibration and water releases. Inspection checklists and field forms. Monitoring within the Locomotive Workshop is required as per the requirements of the EMP and HHRA.
16. Environmental Criteria	Soil and water criteria as presented in this RWP
17. Material Classification	As detailed in this RWP. Materials tracking, including QA/QC inspection and sampling.
18. Community Relations Plan	Specific communication protocols, incorporating nomination of specific contact persons & details and requirements for communications/response register.
19. Incident Reporting	As appropriate, including standard form/checklist.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Element	Specific Minimum Requirements to be included in REMP
20. Security and Signage	Secure site perimeter. Site boundary signage.
21. EMP Review	As appropriate.
22. Training	As appropriate.
23. Contact Details	Company/personnel details, including names/phone numbers for: - Principal Contractor - Site Auditor - Remediation Consultant - Remediation Contractor - OH&S Compliance - Environmental Compliance
24. Stockpiling	All materials stockpiled onsite will be managed by the Remedial Contractor. Unique identification will be provided for each stockpile, the source of the stockpile, its estimated volume, material characterisation and its location onsite (via GPS) will also be recorded consistent with the Material Tracking Plan provided as **Section 8.6.12**. The following procedures will be implemented by the Remedial Contractor: No stockpiles of soil or other materials shall be placed on footpaths or nature strips unless prior Council approval has been obtained; All stockpiles of soil or other materials shall be placed away from drainage lines gutters or stormwater pits or inlets; All stockpiles of soil or other materials likely to generate dust or odours shall be covered; All stockpiles of chemically contaminated soil shall be stored in a secure area and be covered if remaining more than 24 hours; and All stockpiles of asbestos contaminated soils shall be kept damp and covered to minimise potential fibre release, and if left for more than 24 hours, be stored in a secure area.

10.2.3 Certification

Prior to commencement of remediation works, the Remediation Contractor is required to have the REMP endorsed as acceptable by the Environmental Consultant and Site Auditor appointed to validate the works.

A copy of the REMP and the endorsement to the satisfaction of Environmental Consultant or Site Auditor are required to be provided by the Principal Contractor/Remedial Contractor prior to commencement of remediation works.

10.2.4 Hours of Site Operation/Duration of Works

Remediation works shall be completed in accordance with the permissible hours of work and noise as nominated in of the Development Consent.

The appointed remediation contractor will be required to include a proposed schedule of remediation works within the REMP submitted for endorsement as discussed above.

Typical working hours presented following:

- Monday to Friday: 7am to 5pm; and
- Saturday: 8am to 1pm.

10.3 Health and Safety

10.3.1 Work Health and Safety Management Plan

A WHSP shall be prepared by the Remediation Contractor prior to commencement of remediation works. The Plan shall contain procedures and requirements that are to be implemented as a minimum during the works, in addition to the Contingency Plan, referred to in **Section 9**.

The objectives of the WHSP are:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- To apply standard procedures that minimises risks resulting from the works;
- To ensure all employees are provided with appropriate training, equipment and support to consistently perform their duties in a safe manner; and
- To have procedures to protect other site workers and the general public.

These objectives will be achieved by:

- Assignment of responsibilities;
- An evaluation of hazards;
- Establishment of personal protection standards, mandatory safety practices and procedures;
- Monitoring of potential hazards and implementation of corrective measures; and
- Provision for contingencies that may arise while operations are being conducted within the site.

10.3.2 Additional Site-Specific Elements/Procedures

In addition to the normal construction-related matters, the WHSP shall address the following site-specific specific hazards associated with the works relating to the management of contaminated soil and groundwater:

- Under/aboveground services, specifically potential petroleum infrastructure;
- Use of plant and machinery within confined spaces (i.e. tank pit excavations);
- Contact to asbestos contaminated soils, including friable asbestos;
- Contact with contaminated soil (heavy metals, TRH and PAHs), groundwater and vapours, including requirements for specific Personal Protective Equipment (PPE); and
- Heat/cold stress.

10.3.3 Asbestos

The WHSP will include an overview of the asbestos management plan (AMP) and shall comply with relevant NSW regulations.

During the remedial works, perimeter asbestos in air monitoring will be conducted at each applicable remedial works area boundary when soils with asbestos are being disturbed. Air monitoring will be conducted on a daily basis at relevant locations whilst disturbance of asbestos contaminated areas takes place.

Air monitoring will be conducted during any ground disturbance activities within impacted soil within the site to verify that implementation of appropriate control measures have been successful at managing the risk of air borne fibre generation. Air monitoring will be undertaken in accordance with the requirements of the National Occupational Health and Safety Commission (NOHSC) Asbestos Code of Practice and Guidance Notes, in particular the *Guidance note for the estimation of airborne asbestos dust* [NOHSC 3002:2005].

10.3.4 Additional Consideration of Chemical Contaminants

In addition to general assessment of the potential for exposure to chemical contaminants the WHSP should also include specific consideration of additional contaminants such as chlorinated hydrocarbon impacts to soils and lead and PAHs distributed throughout fill materials.

Volatile organic compound concentrations in air should be actively monitored throughout remediation works and any time that workers disturb potentially impacted soils. The services of an occupational hygienist are required full time during impacted soil disturbance activities to determine

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

the controls required to minimise potential health/safety risks to an acceptable level. When working with contaminated materials in general, care needs to be taken to ensure that the contamination is not introduced to the worker via ingestion, inhalation or absorption. The WHSP must detail the PPE and decontamination requirements to be followed to control the risks posed by potential exposure to chemical contaminants at/within the site.

As a precautionary measure, the WHSP should include the requirement for the plan to be revised in the event of an unexpected find of contaminated material during remediation and/or construction.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

11. Conclusions and Recommendations

11.1 Conclusions

Overall, it is considered that the proposed actions outlined in this RAP conform to the requirements of the *Contaminated Land Management: Guidelines for the NSW Site Auditor Scheme (3rd Edition)* (EPA 2017) because they are: technically feasible; environmentally justifiable; and consistent with relevant laws policies and guidelines endorsed by NSW EPA.

Subject to the successful implementation of the measures described in this RAP and the recommendations below, it is concluded that the site can be made suitable for the intended uses and that the risks posed by contamination can be managed in such a way as to be adequately protective of human health and the environment.

11.2 Recommendations

It is recommended that the processes outlined in this RAP be utilised to inform site specific RWPs and subsequently implemented, and that the following documentation be developed and implemented to ensure the risks and impacts during remediation works are controlled in an appropriate manner:

- Individual stage RWPs;
- A REMP, to document the monitoring and management measures required to control the environmental impacts of the works and ensure the validation protocols are being addressed; and
- A WHSP to document the procedures to be followed to manage the risks posed to the health of the remediation workforce.

During the period preceding remediation of the site, ongoing monitoring of potential risks to site receptors shall be completed in accordance with JBS&G (2019c[26])

The REMP and WHSP will require to be cognisant of the potential occurrence and storage/handling of asbestos contaminated soils.

Upon completion of the works, or within various specific areas, validation report(s) are required to be submitted by the Remediation Consultant to the Site Auditor for certification that the site, or relevant portion(s) are suitable for the proposed uses.

12. Limitations

This report has been prepared for use by the client who has commissioned the works in accordance with the project brief only, and has been based in part on information obtained from the client and other parties.

The advice herein relates only to this project and all results conclusions and recommendations made should be reviewed by a competent person with experience in environmental investigations, before being used for any other purpose.

JBS&G accepts no liability for use or interpretation by any person or body other than the client who commissioned the works. This report should not be reproduced without prior approval by the client, or amended in any way without prior approval by JBS&G, and should not be relied upon by other parties, who should make their own enquires.

Sampling and chemical analysis of environmental media is based on appropriate guidance documents made and approved by the relevant regulatory authorities. Conclusions arising from the review and assessment of environmental data are based on the sampling and analysis considered appropriate based on the regulatory requirements.

Limited sampling and laboratory analyses were undertaken as part of the investigations undertaken, as described herein. Ground conditions between sampling locations and media may vary, and this should be considered when extrapolating between sampling points. Chemical analytes are based on the information detailed in the site history. Further chemicals or categories of chemicals may exist at the site, which were not identified in the site history and which may not be expected at the site.

Changes to the subsurface conditions may occur subsequent to the investigations described herein, through natural processes or through the intentional or accidental addition of contaminants. The conclusions and recommendations reached in this report are based on the information obtained at the time of the investigations.

This report does not provide a complete assessment of the environmental status of the site, and it is limited to the scope defined herein. Should information become available regarding conditions at the site including previously unknown sources of contamination, JBS&G reserves the right to review the report in the context of the additional information.

List of NSW Contaminated Sites Notified to EPA as of 22 December 2017

Background

A strategy to systematically assess, prioritise and respond to notifications under Section 60 of the *Contaminated Land Management Act 1997* (CLM Act) has been developed by the EPA. This strategy acknowledges the EPA's obligations to make information available to the public under *Government Information (Public Access) Act 2009*.

When a site is notified to the EPA, it may be accompanied by detailed site reports where the owner has been proactive in addressing the contamination and its source. However, often there is minimal information on the nature or extent of the contamination.

For some notifications, the information indicates the contamination is securely immobilised within the site, such as under a building or carpark, and is not currently causing any offsite consequences to the community or environment. Such sites would still need to be cleaned up, but this could be done in conjunction with any subsequent building or redevelopment of the land. These sites may not require intervention under the CLM Act, but could be dealt with through the planning and development consent process.

Where indications are that the nominated site is causing actual harm to the environment or an unacceptable offsite impact (i.e. it is a "significantly contaminated site"), the EPA would apply the regulatory provisions of the CLM Act to have the responsible polluter and/or landowner investigate and remediate the site.

As such, the sites notified to the EPA and presented in the following table are at various stages of the assessment and/or remediation process. Understanding the nature of the underlying contamination, its implications and implementing a remediation program where required, can take a considerable period of time. The tables provide an indication, in relation to each nominated site, as to the management status of that particular site. Further detailed information may be available from the EPA or the responsible landowner.

The following questions and answers may assist those interested in this issue:

Frequently asked questions

What is the difference between the "List of NSW Contaminated Sites Notified to the EPA" and the "Contaminated Land: Record of Notices"?

A site will be on the Contaminated Land: Record of Notices only if the EPA has issued a regulatory notice in relation to the site under the *Contaminated Land Management Act 1997*.

The sites appearing on this "List of NSW contaminated sites notified to the EPA" indicate that the notifiers consider that the sites are contaminated and warrant reporting to the EPA. However, the contamination may or may not be significant enough to warrant regulation by the EPA. The EPA needs to review and, if necessary, obtain more information before it can make a determination as to whether the site warrants regulation.

Why my site appears on the list?

Your site appears on the list because of one or more of the following reasons:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- The site owner and/or the person partly or fully responsible for causing the contamination notified to the EPA about the contamination under Section 60 of the *Contaminated Land Management Act 1997*. In other words, the site owner or the "polluter" believes the site is contaminated.
- The EPA has been notified via other means and is satisfied that the site is or was contaminated.

Does the list contain all contaminated sites in NSW?

No. The list only contains contaminated sites that the EPA is aware of, with regard to its regulatory role under the CLM Act. An absence of a site from the list does not necessarily imply the site is not contaminated.

The EPA relies upon responsible parties to notify contaminated sites.

How are these notified contaminated sites managed by the EPA?

There are different ways that the EPA manages these notified contaminated sites. First, an initial assessment is carried out by the EPA. At the completion of the initial assessment, the EPA may take one or more than one of the following management approaches:

- The contamination warrants the EPA's direct regulatory intervention either under the *Contaminated Land Management Act 1997* or the *Protection of the Environment Operations Act 1997* (POEO Act), or both. Information about current or past regulatory action on this site can be found on EPA website.
- The contamination with respect to the current use or approved use of the site, as defined under the *Contaminated Land Management Act 1997,* is not significant enough that it warrants EPA regulation.
- The contamination does not require EPA regulation and can be managed by a planning approval process.
- The contamination is related to an operational Underground Petroleum Storage System, such as a service station or fuel depot. The contamination may be managed under the POEO Act and the Protection of the Environment Operation (Underground Petroleum Storage Systems) Regulation 2008.
- The contamination is being managed under a specifically tailored program operated by another agency (for example the Department of Industry and Investment's *Derelict Mines Program*).

I am the owner of a site that appears on the list. What should I do?

First of all, you should ensure the current use of the site is compatible with the site contamination. Secondly, if the site is the subject of EPA regulation, make sure you comply with the regulatory requirements, and you have considered your obligations to notify other parties who may be affected.

If you have any concerns, contact us and we may be able to offer you general advice, or direct you to accredited professionals who can assist with specific issues.

I am a prospective buyer of a site that appears on the list. What should I do?

You should seek advice from the vendor to put the contamination issue into perspective. You may need to seek independent expert advice.

The information provided in the list is meant to be indicative only, and a starting point for your own assessment. Site contamination as a legacy of past site uses is not uncommon,

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

particularly in an urbanised environment. If the contamination on a site is properly remediated or managed, it may not materially impact upon the intended future use of the site. However, each site needs to be considered in context.

List of NSW Contaminated Sites Notified to the EPA

Disclaimer

The EPA has taken all reasonable care to ensure that the information in the list of contaminated sites notified to the EPA (the list) is complete and correct. The EPA does not, however, warrant or represent that the list is free from errors or omissions or that it is exhaustive.

The EPA may, without notice, change any or all of the information in the list at any time.

You should obtain independent advice before you make any decision based on the information in the list.

The list is made available on the understanding that the EPA, its servants and agents, to the extent permitted by law, accept no responsibility for any damage, cost, loss or expense incurred by you as a result of:

1. any information in the list; or
2. any error, omission or misrepresentation in the list; or
3. any malfunction or failure to function of the list;
4. without limiting (2) or (3) above, any delay, failure or error in recording, displaying or updating information.

Site Status	Explanation
Under assessment	The contamination is being assessed by the EPA to determine whether regulation is required. The EPA may require further information to complete the assessment. For example, the completion of management actions regulated under the planning process or *Protection of the Environment Operations Act 1997*. Alternatively, the EPA may require information via a notice issued under s77 of the *Contaminated Land Management Act 1997* or issue a Preliminary Investigation Order.
Regulation under CLM Act not required	The EPA has completed an assessment of the contamination and decided that regulation under the *Contaminated Land Management Act 1997* is not required.
Regulation being finalised	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the *Contaminated Land Management Act 1997*. A regulatory approach is being finalised.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Contamination currently regulated under CLM Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the *Contaminated Land Management Act 1997* (CLM Act). Management of the contamination is regulated by the EPA under the CLM Act. Regulatory notices are available on the EPA's Contaminated Land Public Record.
Contamination currently regulated under POEO Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. Management of the contamination is regulated under the *Protection of the Environment Operations Act 1997* (POEO Act). The EPA's regulatory actions under the POEO Act are available on the POEO public register.
Contamination being managed via the planning process (EP&A Act)	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. The contamination of this site is managed by the consent authority under the *Environmental Planning and Assessment Act 1979* (EP&A Act) planning approval process, with EPA involvement as necessary to ensure significant contamination is adequately addressed. The consent authority is typically a local council or the Department of Planning and Environment.
Contamination formerly regulated under the CLM Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation under the *Contaminated Land Management Act 1997* (CLM Act). The contamination was addressed under the CLM Act.
Contamination formerly regulated under the POEO Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed under the *Protection of the Environment Operations Act 1997* (POEO Act).
Contamination was addressed via the planning process (EP&A Act)	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed by the appropriate consent authority via the planning process under the *Environmental Planning and Assessment Act 1979* (EP&A Act).
Ongoing maintenance required to manage residual contamination (CLM Act)	The EPA has determined that ongoing maintenance, under the *Contaminated Land Management Act 1997* (CLM Act), is required to manage the residual contamination. Regulatory notices under the CLM Act are available on the EPA's Contaminated Land Public Record.

Material Classification Form (example)

MCF Reference # 1000_____

Completed by	Nathan Cussen
Date	24 July 2015
Material Identification (Stockpile name and grid reference, importation source name and unique identification name etc.)	Type A Soils - Organic Garden Mix from Benedict Industries
Source location (Stockpile name and grid reference, source location and grid reference, off-site source address and description of source site residential, quarry etc.)	On site □ Details: Off site (Source Site) ☒ Details: Stockpile located at Menangle Quarry Benedict Industries, Menangle Road, Menangle, NSW.
JBS&G material classification report reference	JBS&G 1000 Date: 24 July 2015
Summary of material characterisation report as prepared by JBS&G	VENM □ for importation ENM □ Reuse on Site □ Waste Classification □ Other ☒ please describe VENM silty sand blended with recovered fines topsoil, ash, fowl manure and composted organics to be imported to site
Volume of material	Survey Information □ Field Estimate □ Required Quantity (off-site source) ☒ Approximately 65 m^3
Material description (material type, colour, inclusions, etc.)	Type A Organic Garden Mix – brown VENM alluvial silty sand and topsoil blended with recovered fines topsoil, ash, fowl manure and compost organics
Is the material free of ACM, staining and malodourous soils	Yes ☒ No □ Details:
If assessment is of material from an off-site Source, is the material suitable for importation to the site?	Yes, the material is suitable to be imported to site.
If assessment is for off-site disposal of material, what is the final waste classification / reuse exemption conclusion?	N/A
If the assessment is for reuse of the material at the site, is the material suitable for reuse	Suitable for reuse: - below the capping profile in road corridor □ - above the capping profile in road corridor footprint and used in landscaped areas ☒ - below the capping profile in recreational areas □ - above the capping profile in recreational areas and used in landscaped areas ☒ - below the marker layer in Lots 8 and 9 □ - above the marker layer in Lots 8 and 9 and used within landscaped areas ☒ - below the marker layer in Lot 12 □ - above the marker layer in Lot 12 and used within landscaped areas ☒
Other comments:	Please ensure Benedict dockets are retained, the volume imported documented and all materials tracked in accordance with the materials tracking plan.

1. Introduction

1.1 Background

JBS&G Australia Pty Ltd (JBS&G) was engaged by Penrith City Council (Council, the client) to undertake a pre-demolition hazardous building materials survey (HBMS) of the structures located within the proposed Penrith City Village Park (PCVP) redevelopment. It is understood that the client is proposing to develop the western portion of PCVP (herein, referred to as the 'site') for contemporary public open space. The site area is shown on **Figures 1** and **2.** In addition, the address and legal identification of each property within the site is provided in **Table 3.1**.

The properties at the site were in a mixed state of occupancy with two properties completely vacant, two partially vacant with the remaining areas tenanted and occupied, and two/three properties completely tenanted and occupied.

To facilitate the redevelopment of the site, the client is proposing to demolish the existing structures. The client has requested a HBMS prior to the commencement of any demolition works.

This advice presents the outcomes of the inspection undertaken by JBS&G personnel and provides recommendations on requirements for the removal of identified hazardous materials in accordance with regulations and guidance in force at the time of the inspection.

The structures were inspected for the following hazardous materials:

- Asbestos containing materials (ACMs);
- Asbestos containing dust (ACD);
- Lead based paints (LP);
- Lead containing Dust (LCD)
- Synthetic mineral fibres (SMF); and
- Polychlorinated biphenyls (PCB).

No previous hazardous building materials survey reports or registers were made available to JBS&G prior to the completion of these works.

1.2 Objectives

The objective of the HBMS was to determine the presence, quantity and condition of any hazardous materials within the buildings prior to proposed demolition works.

The HBMS and production of this report have been undertaken in accordance with the requirements of:

- *Work Health and Safety Act* (2011);
- *Work Health and Safety Regulation* (2017);
- *How to Safely Remove Asbestos Code of Practice*, SafeWork NSW, (2019) (SWNSW 2019a);
- *How to Manage and Control Asbestos in the Workplace Code of Practice*, SafeWork NSW (2019) (SWNSW 2019b);
- Australian Standard 4361.2 (1998) *Guide to Lead Paint Management - Part 2: Residential and Commercial Buildings* (AS4361.2-1998);
- Australian Standard 4361.2 (2017) *Guide to Hazardous Paint Management - Part 2: Lead Paint in Residential, Public and Commercial Buildings* (AS4361.2-2017);

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- National Occupational Health and Safety Commission's *National Standard for Synthetic Mineral Fibres* [NOHSC:1004(1990)];
- National Occupational Health and Safety Commission's *National Code of Practice for the Safe Use of Synthetic Mineral Fibres*, [NOHSC:2006(1990)]; and
- Australian and New Zealand Environment Conservation Council's *Identification of PCB-containing Capacitors: An information booklet for Electricians and Electrical Contractors*, (ANZECC 1997).

1.3 Hazardous Materials Survey Limitations

Whilst all reasonable care has been taken by JBS&G during the completed HBMS, this report is limited due to:

- Only safely accessible areas of the site were surveyed.
- Access restrictions to operational areas such as energised services, gas, air conditioning/heating, pressurised vessels, chemical lines etc.
- Potential materials located in areas in which they could not reasonably be envisaged or anticipated.
- Limited access to internal building components e.g. set floor, walls, ceiling cavities etc., in which case only representative areas were inspected with the hand tools available to the JBS&G consultants for destructive investigation.
- Access restrictions to areas above 3 metres or any area deemed inaccessible without the use of specialised equipment.
- Access to restrictions to areas of structures where the structural integrity for the floor and/or ceiling has been compromised.
- Service pits, confined spaces, voids, cavities within the building structure and internal areas of plant and equipment that could not be safely accessed.

It should be noted that buildings built between the 1930s - 1980s may have general occurrences of ACMs in areas which are not readily accessible with the hand tools available for the survey. These areas and materials include, inter alia:

- Fibre Cement Sheeting (FCS) used as packing to bearers and joists in the underfloor void or as boxing/shuttering to concrete formwork;
- FCS packing between window/door frames and timber studs; and
- Compressed FCS underneath tiled floor areas.

Whilst all care is taken by the consultants to uncover hidden materials, not all areas can be accessed within the allowable timeframe without more industrial (power) tools. As such, only minor destructive sampling techniques were employed to gain access. Consequently, without substantial demolition of the building, it is not possible to guarantee that every source of hazardous material has been detected. JBS&G recommends that areas inaccessible during the survey be inspected as the demolition progresses. If suspected hazardous materials are observed, confirm the presence or absence of hazardous materials through laboratory testing.

In the event suspected hazardous materials are identified during strip out or demolition which are not included in this report, JBS&G recommends that works should cease and an assessment of the materials undertaken by a competent person for further appropriate recommendations.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

No one section or part of a section of this report is to be taken as giving an overall idea of this report. Each section is to be read in conjunction with the whole of this report, including the appendices and attachments.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

2. Methodology

2.1 Hazardous Materials

2.1.1 Asbestos Containing Materials and Asbestos Containing Dust

Representative samples of suspected ACMs and ACDs were collected where possible and placed into a zip-lock bags. These were subsequently delivered to a NATA accredited laboratory for analysis using polarised light microscopy in conjunction with dispersion staining techniques. Similar materials to those analysed or other materials known to contain asbestos from the consultant's experience (e.g. Electrical backing boards, corrugated asbestos cement roofs and older fibre cement sheeting) or materials not accessible may also be assumed to contain asbestos as per the relevant Code of Practice.

At the time of inspection, the following details were recorded:

- Location;
- Type of material;
- Accessibility;
- Condition;
- Friability; and
- Volume/dimensions.

2.1.2 Lead Based Paint

Australian Standard AS4361.2 (2017) *Guide to Hazardous Paint Management - Part 2: Lead Paint in Residential, Public and Commercial Buildings* defines lead paints as those in which the lead content (calculated as lead metal) is in excess of 0.1 percent by weight of the dry film. This can be determined by field spot tests, laboratory testing or the use of portable X-ray fluorescence (XRF) field tests. JBS&G utilises XRF technology as a screening tool for the identification of lead based paints in the field. Any detection of lead greater than 0.1 mg/cm^2 was adopted for the assessment of lead based paints for this investigation with representative samples collected where possible and delivered to a NATA accredited laboratory for analysis using inductively coupled plasma optical emission spectrometry (ICP-OES).

2.1.3 Lead Containing Dust

Representative samples of accumulated or settled dust were collected and delivered to a NATA accredited laboratory for analysis via ICP-OES. A conservative assessment criteria was adopted for this investigation given the potential for human exposure and the readily disturbed and uncontained nature of accumulated or settled dust.

Concentrations of lead within accumulated or settled dust were compared against the health investigation level (HIL) for residential sites with garden/accessible soil of 300 mg/kg as outlined in National Environment Protection Measure (NEPC 2013) guidelines.

2.1.4 Polychlorinated Biphenyls

Old fluorescent light fittings and other appliances which may contain capacitors containing PCB dielectric oil are identified by inspection and evaluation with the consultant's experience of similar light fittings and appliances. Alternatively, where possible and when it was safe to do so, a representative light fitting was opened to reveal the capacitor and the make and model recorded to be compared against the ANZECC (1997) list of PCB containing capacitors.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

2.1.5 Synthetic Mineral Fibres

SMF containing materials were either sampled as per the asbestos methodology or assumed to contain SMF from the consultant's experience of similar materials.

2.2 Inaccessible Areas

As per SWNSW 2019b, any areas not accessible must be recorded as such. Where hazardous materials are suspected to be contained within inaccessible areas, these shall be documented in this report and the associated Hazardous Materials Register (**Appendix A**).

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3. Site Description

The HBMS was conducted on 28 February, 2 March and 3 March 2020 by Stuart Lumsden and Brendan Sinclair, two of JBS&G's experienced hazardous materials surveyors and SafeWork NSW Licensed Asbestos Assessors (LAA 001140 and LAA 001316 respectively).

The site was bound by Henry Street to the north, Gaymark Lane to the east, Allen Place to the south and Station Street to the West. The site comprised seven lots grouped into six properties, with a total of seven structures.

At the time of inspection, the properties were in a mixed state of occupancy with two properties completely vacant, two partially vacant with the remaining areas tenanted and occupied, and two/three properties completely tenanted and occupied.

The property identification number, address, associated lots, number of structures, and hazardous materials identified is summarised in **Table 3.1** with the property identification and location also shown on **Figure 2**.

Table 3.1: Property Summary

Property Identification	Lots	Address	Structures
Property #1	Lot 1 in DP 164798	134-138 Henry Street	One double storey structure
Property #2	Lot 10 and 11 in DP 553665	140-142 Henry Street	One combined single and double storey structure
Property #3	Lot 2 in DP 556075	144 Henry Street	One single storey structure
Property #4	Lot 3 in DP 1200790	42-44 Station Street	Two single storey structures
Property #5	Lot E in DP 163176	46 Station Street	One double storey structure
Property #6	Lot 1 in DP 526304	48-50 Station Street	One single storey structure

The type, location, friability, accessibility and approximate quantities of identified and suspected hazardous materials are provided in the Hazardous Materials Register in **Appendix A**. Photographs taken during the HBMS are presented in **Appendix B**. A summary of the observations made during the HBMS is included in the following sections.

3.1 Property #1 – 134-138 Henry Street

Property #1 comprised a double storey commercial structure and based on available historical aerial imagery, the structure was observed to have been constructed between 1956 and 1965. The ground floor comprised three shops and the first floor consisted of four office suites and a common area comprising a hallway, kitchen, and male and female toilets.

3.1.1 Exterior

The external areas of the building comprised terracotta tile roof, brick walls, and a ground floor awning on the north, east and south façades. The western façade was located within an enclosed and locked access walkway/fire escape between Property #1 and Property #2.

A summary of the significant observations made during the HBMS is as follows:

- Asbestos containing fibre cement sheeting (B1-A07) was identified to the eaves, soffits and ceiling lining to the external stairs. A detached panel from the northern eave was observed on top of the ground floor awning.
- Asbestos containing fibre cement sheeting (B1-A06) was identified to the ceiling lining of ground floor awning. This material was also identified to the upper panels of the door to the external bin area.
- An asbestos containing black bituminous roof membrane (B1-A03) was identified to the rooftop plant area beneath the new grey surface membrane coating.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Asbestos containing fibre cement sheeting (B1-A04) was identified to the wall linings between the rooftop plant area and ceiling cavity.
- A suspected asbestos containing electrical mounting board (EMB) was identified within the electrical cabinet at the top of the external stairs. A sample was unable to be collected due to the supply of live electricity.
- Lead based brown paint (B1-LP04, 0.22% w/w) was identified to the timber fascia panels in the rooftop plant area.
- All remaining external accessible paint systems were screened via XRF. The presence of lead was detected in all paint systems (XRF result for lead > 3.0 mg/cm^2) which exceeds the adopted screening level for this investigation and, therefore, all external paint systems are assumed to comprise lead based paints.
- Fluorescent lights were identified throughout the external areas and are suspected to contain PCB capacitors, however, a detailed inspection was not possible due to the supply of live electricity.
- Two hot water systems were identified within the western external access way and are suspected to contain SMF internal insulation.

3.1.2 Interior

3.1.2.1 Ground Floor

The ground floor comprised three shops and a common staircase providing access to the first floor. Shop 1 comprised the southern portion of the building, Shop 2 comprised the central portion of the building, Shop 3 comprised the central portion of the building, and the common staircase was located between Shop 2 and Shop 3. All three shops were tenanted and occupied at the time of inspection and comprised concrete floors with various floor coverings, combination of cement rendered brick and plaster walls, and plaster ceilings.

A summary of the significant observations made during the HBMS is as follows:

- A suspected asbestos containing fibre cement infill panel was identified above the door to Shop 1.
- A suspected asbestos containing EMB was identified to the electrical cabinet in Shop 2. A sample was unable to be collected due to the supply of live electricity.
- Three suspected asbestos containing EMBs were identified to the electrical cabinet in Shop 3. A sample was unable to be collected due to the supply of live electricity.
- Asbestos containing black fibrous bituminous material within settled dust (B1-AD01) was identified to internal floor surface of the electrical cabinet in Shop 3.
- Non-asbestos containing black and white vinyl flooring (B1-A01) was identified to the main shop floor and office of Shop 3.
- Non-asbestos containing fibre cement infill panels (B1-A02) were identified to the western wall of Shop 3.
- Lead based white paint (B1-LP01, 1.3% w/w) was identified to the internal cement rendered walls of Shop 3. This paint system was also identified to the internal cement rendered walls in Shop 1 and Shop 2.
- Lead based black and white paints (XRF >2.5 mg/kg) were identified to the timber front doors and door frames of Shop 3.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Fluorescent lights were identified throughout the ground floor internal areas and are suspected to contain PCB capacitors, however, a detailed inspection was not possible due to the supply of live electricity.

3.1.2.2 First Floor

The first floor comprised; a common area consisting of a lobby/hallway, a kitchen and male and female toilets; Suite 1 at the southern end of the hallway, Suite 2 and Suite 3 on the eastern side of the hallway opposite the kitchen and toilets, and Suite 4 to the north of the hallway. All suites and common areas comprised concrete or timber floors, a combination of cement rendered brick and plaster walls, and plaster ceilings.

At the time of inspection, Suites 1 and 2 were tenanted, and Suites 3 and 4 were vacant.

A summary of the significant observations made during the HBMS is as follows:

- Asbestos containing fibre cement debris (B1-A05) was identified within the ceiling cavity, adjacent to the access to the rooftop plant area
- A suspected asbestos containing EMB was identified to the electrical cabinet in the kitchen. A sample was unable to be collected due to the supply of live electricity.
- Elevated levels of lead within settled dust above the adopted site criteria (B1-LD01, 540 mg/kg) was identified throughout the ceiling cavity. This dust was found not to contain asbestos (B1-AD02).
- Lead based white paint (B1-LP03, 0.12% w/w) was identified to the timber windows throughout the common areas and suites.
- Non-lead based cream paint (B1-LP02, 0.02% w/w) was identified to the cement rendered walls throughout the common areas and suites 3.
- Fluorescent lights were identified throughout Suite 4 and comprised RIFA Type PHN (6.5 µF capacitance) capacitors. These capacitors are listed in ANZECC 1997 as known to contain PCBs.
- Fluorescent lights were also identified throughout the remaining internal areas and are suspected to contain PCB capacitors, however, a detailed inspection was not possible due to the supply of live electricity.
- A hot water system was identified in the kitchen and is suspected to contain SMF internal insulation.
- Suspected SMF insulation was identified to the operational air conditioning ducting, redundant ducting, and as loose fill insulation throughout the ceiling cavity.
- Suite 2 was tenanted at the time of this inspection and no access was available. Based on observations during the HBMS, the hazardous materials identified in Suites 1, 3, and 4 are also assumed to be present within Suite 2.

3.2 Property #2 – 140-142 Henry Street

Property #2 comprised a combined single and double storey commercial structure with an arcade walkway separating the structure into an eastern portion and a western portion. Based on available historical aerial imagery, the structure was observed to have been constructed between 1965 and 1978. The eastern portion comprised three shops and the western portion comprised seven shops. At the time of inspection, all shops were tenanted and occupied.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3.2.1 Exterior and Arcade

The exterior of the building comprised corrugated metal roof, exposed and cement rendered brick walls, corrugated metal fascia cladding. The northern façade of the building comprised brick and glass shop fronts with an awning over the footpath. The Arcade comprised brick and glass shop fronts, concrete floor with ceramic tiles, and a combination of metal slats and plaster ceiling.

A summary of the significant observations made during the HBMS is as follows:

- Asbestos containing fibre cement sheeting (B2-A01) was identified to the external eaves and fascia panelling to the eastern façade of the building. This material is also assumed to be present behind the corrugated metal cladding to the southern façade of the eastern portion and behind the sloped plasterboard ceiling to the eastern side of the Arcade.
- Three large suspected asbestos containing EMBs were identified within the electrical cabinet located in the car parking area. Three smaller EMBs were also located within the electrical cabinet but are not suspected to contain asbestos.
- Suspected asbestos containing fibre cement sheeting was identified to the southern roof parapet of the eastern portion, however, a sample was unable to be collected due to height safety hazards.
- Non-asbestos containing fibre cement sheeting (B2-A02) was identified to the ceiling lining of the northern awning to the eastern portion.
- Non-asbestos containing fibre cement sheeting (B2-A03) was identified to the northern gable panels of the Arcade.
- Non-asbestos containing fibre cement sheeting (B3-A04) was identified to the ceiling lining of the northern awning to the western portion.
- Non-asbestos containing fibre cement sheeting (B3-A05) was identified to the southern eaves to the western portion.
- Non-asbestos containing bituminous material (B3-A03) was identified to the expansion joint in the western façade of the western portion.
- Non-asbestos containing bituminous material (B3-A06) was identified to the expansion joints of the concrete footpath to the southern aspect of the building.
- Non-lead based blue paint (B2-LP01, 0.1% w/w) was identified to the doors and door frames of the toilets to the eastern aspect of the eastern portion.
- All remaining accessible external paint systems were screened via XRF and found not to comprise lead based paint systems (i.e. XRF result <0.1 mg/cm^2)
- Fluorescent lights were identified throughout the external areas and Arcade and are suspected to contain PCB capacitors, however, a detailed inspection was not possible due to the supply of live electricity.
- Suspected SMF insulation was identified to the roof throughout the ceiling cavity of the Arcade.

3.2.2 Interior

3.2.2.1 Eastern Portion

The eastern portion of the property comprised three shops with Shop 1 comprising the northern portion, Shop 2 comprising the central portion, and Shop 3 comprising the southern portion. All three shops were tenanted and occupied at the time of inspection and comprised concrete floors

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

with various floor coverings, combination of cement rendered brick and plaster walls, and plaster suspended ceiling tiles.

A summary of the significant observations made during the HBMS is as follows:

- A suspected asbestos containing EMB was identified within the electrical cabinet of Shop 1.
- Elevated levels of lead within settled dust above the adopted site criteria (B2-LD01, 380 mg/kg) was identified throughout the ceiling cavity of shop 2. This dust was found not to contain asbestos (B2-AD01).
- Non-lead based cream paint (B2-LP02, <0.01% w/w) was identified to the door frames of the Shop 1 toilets.
- All remaining accessible paint systems were screened via XRF and found to comprise non-lead based paint systems (i.e. XRF result <0.1 mg/cm^2).
- Fluorescent lights were identified throughout the internal areas and are suspected to contain PCB capacitors, however, a detailed inspection was not possible due to the supply of live electricity.
- A hot water system was identified in Shop 2 and another was identified within the ceiling cavity above the external male toilet. Both hot water systems are suspected to contain internal SMF insulation.
- Suspected SMF insulation was identified to the roof throughout the ceiling cavity.
- Shop 3 was tenanted at the time of this inspection and no access was available. Based on observations during the HBMS, the hazardous materials identified within Shops 1 and 2 are also assumed to be present within Shop 3.

3.2.2.2 Western Portion

The western portion of the property comprised seven shops with Shops 7 and 8 comprising the northwest portion, Shops 4 and 5 comprising the northeast portion, Shop 6 comprising the central portion, Shop 10 comprising the ground floor southern portion, and Shop 9 comprising the first floor southern portion. All shops were tenanted and occupied at the time of inspection and comprised concrete floors with various floor coverings, combination of cement rendered brick and plaster walls, and a combination of plasterboard ceilings and suspended ceiling tiles.

A summary of the significant observations made during the HBMS is as follows:

- Suspected asbestos containing fibre cement sheeting was identified to the southern cream painted wall within the staff room of Shop 10. This material was also identified to the internal walls of the staff toilets in Shop 10.
- Suspected asbestos containing fibre cement sheeting was identified to skylight walls within the ceiling cavity above the toilets of Shop 9.
- Non-asbestos containing cream vinyl flooring (B3-A01) was identified to the lunch room and hallway of Shop 7/8.
- Non-asbestos containing blue/grey vinyl flooring (B3-A02) was identified to the kitchen and strong room within Shop 9.
- Asbestos containing loose fibre bundles within settled dust (B3-AD02) was identified within the ceiling cavity above Shop 4/5. This material is identified as friable asbestos and is assumed to be present throughout the ground floor ceiling cavity of the western portion. This dust was also found to contain lead concentrations below the adopted site criteria (B3-LD02, 210 mg/kg).

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Levels of lead within settled dust below the adopted site criteria (B3-LD01, 120 mg/kg) was identified throughout the ceiling cavity of above Shop 7/8. This dust was found not to contain asbestos (B3-AD01).
- Levels of lead within settled dust below the adopted site criteria (B3-LD03, 140 mg/kg) was identified throughout the ceiling cavity above Shop 6. This dust was found not to contain asbestos (B3-AD03).
- Elevated levels of lead within settled dust above the adopted site criteria (B3-LD04, 680 mg/kg) was identified throughout the ceiling cavity of Shop 9. This dust was also found not to contain asbestos (B3-AD04).
- Non-lead based dark blue paint (B3-LP01, <0.01% w/w) was identified to the doors and door frames of the Shop 7/8 toilets.
- Lead based cream paint (B3-LP02, 0.17% w/w) was identified to the doors and door frames of the Shop 10 toilets.
- All remaining accessible paint systems were screened via XRF and found to comprise non-lead based paint systems (i.e. XRF result <0.1 mg/cm^2).
- Fluorescent lights were identified throughout the internal areas and are suspected to contain PCB capacitors, however, a detailed inspection was not possible due to the supply of live electricity.
- Suspected SMF ceiling tiles were identified to the suspended ceilings of Shop 7/8.
- A hot/cold water system was identified within the kitchen of Shop 7/8 and is suspected to contain internal SMF insulation.
- Suspected SMF insulation was identified to the air conditioning ducting and roof sarking throughout the ceiling cavities.

3.3 Property #3 – 144 Henry Street

Property #3 comprised a single storey commercial structure in the northern portion and an asphalt sealed car park in the southern portion. The structure comprised two shops, with the western portion comprising Shop 1 and the eastern portion comprising Shop 2. Based on available historical aerial imagery, the structure was observed to have been constructed between 1978 and 1986.

3.3.1 Exterior

The external areas of the building comprised corrugated metal roof and a combination of exposed brick and corrugated metal walls. The northern facade of the building comprised brick and glass shop fronts with an awning over the footpath and the southern facade of the building comprised brick walls with a metal gate and car park to the south.

A summary of the significant observations made during the HBMS is as follows:

- A locked electrical cabinet was identified to the southwest corner of the building and is suspected to contain an asbestos containing EMB.
- Non-asbestos containing fibre cement sheeting (B4-A02) was identified to the ceiling lining of the awning.
- All accessible external paint systems were screened via XRF and found not to comprise lead based paint systems (i.e. XRF result <0.1 mg/cm^2)
- No other hazardous materials were identified to the external areas of the building.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3.3.2 Interior

3.3.2.1 Shop 1

Shop 1 comprised the western portion of the building with cement rendered brick and plasterboard walls, concrete floors with various floor coverings, and suspended ceiling tiles. At the time of inspection Shop 1 was tenanted consisting of a reception area, store room, treatment rooms, and a kitchen/bathroom area at the southern end of the building.

A summary of the significant observations made during the HBMS is as follows:

- Non-asbestos blue vinyl flooring (B4-A01) was identified to the treatment rooms.
- Levels of lead within settled dust below the adopted site criteria (B4-LD01, 220 mg/kg) was identified throughout the ceiling cavity. This dust was found not to contain asbestos (B4-AD01).
- Lead based blue paint (B4-LP01, 1.2% w/w) was identified to the doors and door frames of the toilets.
- All remaining accessible paint systems were screened via XRF and found not to comprise lead based paint systems (i.e. XRF result <0.1 mg/cm^2)
- Suspected SMF containing ceiling tiles were identified to the suspended ceiling throughout.
- An instant hot water system was identified to the kitchen area and is suspected to contain internal SMF insulation.
- Suspected SMF insulation was identified to the roof sarking throughout the ceiling cavity.
- Fluorescent light fittings were identified throughout but based on their modern age and appearance they are not suspected to contain PCB containing capacitors.

3.3.2.2 Shop 2

Shop 2 comprised the eastern portion of the building with cement rendered brick and plasterboard walls, concrete floors with various floor coverings, and suspended ceiling tiles. At the time of inspection Shop 2 was tenanted consisting of an entry, meeting room, open office area, kitchen and break room area, and a toilet.

A summary of the significant observations made during the HBMS is as follows:

- Levels of lead within settled dust below the adopted site criteria (B4-LD02, 140 mg/kg) was identified throughout the ceiling cavity. This dust was found not to contain asbestos (B4-AD02).
- Non-lead based white paint (B4-LP02, 0.03% w/w) was identified to the doors and door frames of the toilets.
- All remaining accessible paint systems were screened via XRF and found not to comprise lead based paint systems (i.e. XRF result <0.1 mg/cm^2)
- An instant hot water system was identified within the kitchen and is assumed to contain internal SMF insulation.
- Suspected SMF insulation was identified to the roof sarking throughout the ceiling cavity.

3.4 Property #4 – 42-44 Station Street

Property #4 comprised two single storey structures and based on available historical aerial imagery, both structures were observed to have been constructed between 1943 and 1956. The Funeral Home building was located in the central portion of the property and the Garage was located

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

adjacent the eastern boundary of the property. At the time of inspection, the structures were vacant.

3.4.1 Funeral Home

The Funeral Home comprised a single storey structure with a terracotta tile roof, exposed brick external walls, cement rendered brick internal walls, horsehair plasterboard ceilings and timber floors.

Internally, the Funeral Home comprised a number of rooms including a large hall, offices, store rooms, kitchen, toilets, and a bathroom. Constructed within the roof void was a three room attic, accessed by external stairs on the eastern aspect of the building. The attic comprised fibre cement walls, damaged masonite ceiling panels, and timber floors. The northern room of the attic was sealed with plastic and marked with asbestos warning stickers.

A summary of the significant observations made during the HBMS is as follows:

- Asbestos containing fibre cement sheeting (B5-A01) was identified to the eaves, soffits and window soffits.
- Asbestos containing fibre cement sheeting (B5-A04) was identified to the internal walls throughout the attic. This material was also identified to the walls and ceiling to the external stairs and the eastern entry soffit.
- A suspected asbestos containing EMB was identified within the electrical cabinet to the external eastern aspect of the building.
- Suspected asbestos containing fibre cement fragments were identified to the roof space as packing between rafters.
- Asbestos containing red vinyl floor tiles (B5-A05) were identified to the attic bathroom.
- Non-asbestos containing vinyl sheeting with fibrous backing (B5-A06) was identified to the floor of the attic northern room.
- Non-asbestos containing red (B5-A07) and black (B5-A08) cable sheathing was identified to the old redundant electrical wiring within the roof void.
- Elevated levels of lead within settled dust above the adopted site criteria (B5-LD02, 850 mg/kg) was identified to the floor of the attic bathroom. This dust was found not to contain asbestos (B5-AD02).
- Elevated levels of lead within settled dust above the adopted site criteria (B5-LD03, 810 mg/kg) was identified throughout the roof void. This dust was found not to contain asbestos (B5-AD03).
- Lead based white paint (B5-LP01, 3.6% w/w) was identified to exterior eaves and window frames.
- Lead based cream paint (B5-LP04, 0.12% w/w) was identified to exterior window frames.
- Non-lead based blue paint (B5-LP03, 0.08% w/w) was identified to the internal walls of the southern office.
- All remaining accessible paint systems were screened via XRF and found not to comprise lead based paint systems (i.e. XRF result <0.1 mg/cm^2)
- Fluorescent lights were identified to the external areas and are suspected to contain PCB capacitors, however, a detailed inspection was not possible due to the supply of live electricity.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- A hot water system was identified to the external eastern aspect of the building and is suspected to contain internal SMF insulation.

3.4.2 Garage

The Garage comprised a single storey structure with a terracotta roof, exposed brick walls, concrete floors, fibre cement internal partition walls, and Masonite ceilings to the central rooms.

Internally, the Garage comprised a number of rooms including a laundry, store rooms, a cool room, toilet, and parking areas accessed via roller doors.

A summary of the significant observations made during the HBMS is as follows:

- Assumed asbestos containing fibre cement sheeting (similar to B5-A01) was identified to the ceiling of the toilet.
- Non-asbestos containing bituminous roof sarking (B5-A02) was identified throughout.
- Non-asbestos containing fibre cement sheeting (B5-A03) was identified to the internal partition walls.
- Non-asbestos containing window putty (B5-A09) was identified to the external timber windows.
- A suspected asbestos containing EMB was identified to the electrical cabinet within the northern room.
- Elevated levels of lead within settled dust above the adopted site criteria (B5-LD01, 350 mg/kg) was identified to the floor of the northern garage. This dust was found not to contain asbestos (B5-AD01).
- Lead based red paint (B5-LP02, 0.71% w/w) was identified to the exterior guttering and downpipes.
- All remaining accessible paint systems were screened via XRF and found to comprise lead based paint systems (i.e. XRF result >0.1 mg/cm^2)
- Fluorescent lights were identified throughout the internal areas and are suspected to contain PCB capacitors, however, a detailed inspection was not possible due to the supply of live electricity.
- A hot water system was identified within the laundry and is assumed to contain internal SMF insulation.

3.5 Property #5 – 46 Station Street

Property #5 comprised a double storey commercial structure occupying the majority of the property with a concrete sealed car park area and gravel driveway in the eastern portion providing access from Allen Place. Based on available historical aerial imagery, the structure was observed to have been constructed between 1956 and 1965. The building comprised separate ground floor and first floor tenancies. At the time of inspection, the ground floor was vacant, and the first floor was tenanted and occupied.

3.5.1 Exterior

The external areas of the building comprised corrugated metal roof and exposed brick walls. The western façade consisted of a brick and glass shop front with fibre cement fascia panelling above.

A summary of the significant observations made during the HBMS is as follows:

- Non-asbestos containing fibre cement sheeting (B6-A05) was identified to the fascia panels to the western façade.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Suspected asbestos containing fibre cement sheeting was identified to the parapet lining of the ground floor roof.
- Air conditioning ducting was identified to the ground floor roof. Based on its age and appearance, suspected asbestos containing mastic is assumed to be present within the flange joints.
- Non-asbestos containing bituminous expansion joint material (B6-A07) was identified to the eastern concrete car park area.
- Suspected asbestos containing putty was identified to the aluminium framed windows throughout. A sample was unable to be collected without damaging or breaking the windows.
- Lead based white paint (B6-LP02, 0.39% w/w) was identified to the metal pole to the eastern concrete stairs.
- All remaining accessible external paint systems were screened via XRF and found to comprise non-lead based paint systems (i.e. XRF result <0.1 mg/cm^2).

3.5.2 Interior

3.5.2.1 Ground Floor

The ground floor tenancy comprised concrete floors with various floor coverings, concrete and plaster ceilings, and cement rendered brick and plasterboard internal walls. The western portion comprised the main shop floor and a strong room and the eastern portion comprised toilets, bathroom, store rooms and offices, and a kitchen. The ground floor also comprised a separate corridor and stairs providing access to the first floor from Station Street.

A summary of the significant observations made during the HBMS is as follows:

- A suspected asbestos containing EMB was identified within the electrical cupboard in the access corridor to the first floor.
- Asbestos containing fibre cement sheeting (B6-A06) was identified to the lining of the electrical cupboard in the access corridor to the first floor.
- Non-asbestos containing grey vinyl tiles (B6-A01) was identified to the floor of the strong room.
- Non-asbestos containing cream vinyl flooring (B6-A02) was identified to the eastern office.
- Non-asbestos containing red vinyl flooring (B6-A03) was identified to the kitchen.
- Asbestos containing fibre cement sheeting (B6-A04) was identified to the ceilings of the two kitchen cupboards. This material was also identified to the ceiling of the shower and cupboard above the shower.
- Non-lead based purple paint (B6-LP01, 0.06% w/w) was identified to doors and door frames of the toilets.
- All remaining accessible paint systems were screened via XRF and found to comprise non-lead based paint systems (i.e. XRF result <0.1 mg/cm^2).
- Fluorescent lights were identified throughout the ground floor and are suspected to contain PCB capacitors, however, a detailed inspection was not possible due to the supply of live electricity.
- A hot water system was identified within the cupboard above the shower and is suspected to contain internal SMF insulation.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3.5.2.2 First Floor

The first floor tenancy comprised timber floors with various floor coverings, plaster ceilings, and cement rendered brick, plasterboard and timber internal walls. The first floor comprised offices, waiting areas and a kitchen. Male and female toilets were located in the eastern portion comprising exposed brick walls, concrete floor and plaster ceilings.

A summary of the significant observations made during the HBMS is as follows:

- Suspected asbestos containing fibre cement sheeting was identified to the ceilings of the toilet corridor.
- Asbestos containing weathered fibre cement fragments within settled dust (B6-AD01) was identified within the ceiling cavity. This material is classified as friable asbestos and is assumed to be present throughout the ceiling cavity.
- Elevated levels of lead within settled dust above the adopted site criteria (B6-LD01, 1300 mg/kg) was also identified throughout the ceiling cavity.
- Non-lead based white paint (B6-LP03, 0.05% w/w) was identified to cabinet in the female toilet.
- Non-lead based brown paint (B6-LP04, 0.04% w/w) was identified to walls of the male and female toilets.
- Non-lead based cream paint (B6-LP05, 0.04% w/w) was identified to walls of the eastern office.
- All remaining accessible paint systems were screened via XRF and found to comprise non-lead based paint systems (i.e. XRF result <0.1 mg/cm^2).
- Fluorescent lights were identified throughout the first floor and are suspected to contain PCB capacitors, however, a detailed inspection was not possible due to the supply of live electricity.
- A hot water system was identified within the kitchen and is suspected to contain internal SMF insulation.
- Suspected SMF insulation batts were also identified throughout the ceiling cavity.

3.6 Property #6 – 48-50 Station Street

Property #6 comprised a single storey commercial structure with a corrugated metal roof, exposed brick walls, concrete floor with various floor coverings, and plaster suspended ceiling tiles. Based on available historical aerial imagery, the structure was observed to have been constructed in the between 1956 and 1965.

Internally, the structure consisted of a large main room, small electrical room in the northwest corner, and toilets and office in the central southern portion. At the time of inspection, the structure was vacant.

A summary of the significant observations made during the HBMS is as follows:

- Asbestos containing fibre cement fragments (B7-A01) were identified to the floor of the main room. These fragments were located in the central portion directly below an open ceiling tile.
- Asbestos containing fibre cement fragments (B7-A02) were identified throughout the ceiling cavity. The ACM fragments were observed to comprise a both flat and moulded fibre cement material.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Non-asbestos containing compressed fibre cement sheeting (B7-A03) were identified to the western façade fascia panels.
- Asbestos containing fibre cement sheeting (B7-A04) was identified to the ceilings of the toilets.
- A suspected asbestos containing EMB was identified within the electrical room.
- The pipework associated with the sprinkler system within the electrical room and ceiling cavity was labelled as installed in 1960. Based on the age of the pipework, suspected asbestos containing gaskets are assumed to be present to the flange joints of the pipework.
- Asbestos containing loose fibre bundles within settled dust (B7-AD01) was identified within the ceiling cavity. This material is classified as friable asbestos and is assumed to be present throughout the ceiling cavity. This dust was also found to contain elevated levels of lead above the adopted site criteria (B7-LD01, 770 mg/kg).
- Asbestos containing loose fibre bundles within settled dust (B7-AD02) was identified to the floor of the electrical room. This material is classified as friable asbestos and is potentially present throughout the internal areas of the structure. This dust was also found to contain elevated levels of lead above the adopted site criteria (B7-LD02, 1300 mg/kg).
- Non-asbestos containing bituminous material (B7-A05) was identified to the expansion joints in the external southern wall.
- Non-asbestos containing bituminous material (B7-A06) was identified to the expansion joints in the concrete footpath to the southern aspect of the building.
- Lead based maroon paint (B7-LP01, 0.16% w/w) was identified to the doors of the toilets.
- Lead based paint (B7-LP02, 0.89% w/w) was identified to steel framework of the roof (Note – this sample was reported as sample B2-LD02 within the laboratory analysis report included as **Appendix C**).
- All remaining accessible paint systems were screened via XRF and found to comprise non-lead based paint systems (i.e. XRF result <0.1 mg/cm^2).
- An instant hot water system was identified in the toilet and is suspected to contain internal SMF insulation.
- Suspected SMF insulation was identified to the air conditioning ducting and roof sarking throughout the ceiling cavity.
- Fluorescent lights were identified throughout and are suspected to contain PCB capacitors, however, a detailed inspection was not possible due to the supply of live electricity.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4. Results

4.1 Hazardous Materials

All identified hazardous materials are recorded in the Hazardous Materials Register in **Appendix A** with relevant photographs in **Appendix B**. NATA accredited laboratory analysis reports and chain of custody are provided in **Appendix C**.

4.1.1 Asbestos Containing Materials

ACM were identified by testing at an accredited NATA laboratory and/or visual inspection using the experience of the hazardous materials surveyor. A summary of the results of laboratory testing for asbestos are provided in **Table A** below.

Table A: Asbestos Results Summary Table

Sample ID	Lab ID	Sample Location	Results	Observed Condition
Property #1				
B1-A01	20-Ma03541	Shop 3, floor - Black and white vinyl tile	No Asbestos Detected	N/A
B1-A02	20-Ma03542	Shop 3, western wall, infill panels - Fibre cement sheeting	No Asbestos Detected	N/A
B1-A03	20-Ma03543	External, rooftop plant area, floor - Black bituminous membrane	**Chrysotile and Amosite Asbestos**	Non-Friable
B1-A04	20-Ma03544	External, rooftop plant area, walls - Fibre cement sheeting	**Chrysotile Asbestos**	Non-Friable
B1-A05	20-Ma03545	Ceiling cavity - Fibre cement debris	**Chrysotile Asbestos**	Non-Friable
B1-A06	20-Ma03546	External, Ground floor awning - Fibre cement sheeting	**Chrysotile Asbestos**	Non-Friable
B1-A07	20-Ma03547	External, eaves and soffits - Fibre cement sheeting	**Chrysotile, Amosite and Crocidolite Asbestos**	Non-Friable
Property #2				
B2-A01	20-Ma03548	External, Eastern Portion, eaves and fascia - Fibre cement sheeting	**Chrysotile and Amosite Asbestos**	Non-Friable
B2-A02	20-Ma03549	External, Eastern Portion, north awning - Fibre cement sheeting	No Asbestos Detected	N/A
B2-A03	20-Ma03550	External, north gables to Arcade - Fibre cement sheeting	No Asbestos Detected	N/A
B3-A01	20-Ma03551	Shop 7/8, lunch room and hallway, floor - Cream vinyl	No Asbestos Detected	N/A
B3-A02	20-Ma03552	Shop 9, kitchen/lunch room and hallway, floor - Blue/grey vinyl	No Asbestos Detected	N/A
B3-A03	20-Ma03553	External, Western Portion, west façade, expansion joint – Bituminous material	No Asbestos Detected	N/A
B3-A04	20-Ma03554	External, Western Portion, north awning - Fibre cement sheeting	No Asbestos Detected	N/A
B3-A05	20-Ma03555	External, Western Portion, south eaves - Fibre cement sheeting	No Asbestos Detected	N/A
B3-A06	20-Ma03556	External, Western Portion, south footpath, expansion joint – Bituminous material	No Asbestos Detected	N/A
Property #3				
B4-A01	20-Ma03557	Unit 1, treatment rooms, floor - Blue vinyl	No Asbestos Detected	N/A
B4-A02	20-Ma03558	External, north awning - Fibre cement sheeting	No Asbestos Detected	N/A
Property #4				
B5-A01	20-Ma03559	Funeral Home, eaves and soffits - Fibre cement sheeting	**Chrysotile and Amosite Asbestos**	Non-Friable

4.1.4 Lead Based Paints

Representative paint samples were collected throughout the building for laboratory testing. A summary of the results of laboratory testing for lead are provided in **Table D** below.

Table D: Lead Paint Results Summary Table

Sample ID	Lab ID	Sample Location	Results	Observed Condition
Property #1				
B1-LP01	20-Ma03647	Ground floor, Shop 3, walls - White paint	**Lead based paint (1.3% w/w)**	Good
B1-LP02	20-Ma03648	First floor, walls - Cream paint	Non-lead based paint (0.02% w/w)	N/A
B1-LP03	20-Ma03649	First floor, window frames - White paint	**Lead based paint (0.12% w/w)**	Good
B1-LP04	20-Ma03650	Roof, fascia - Brown paint	**Lead based paint (0.22% w/w)**	Poor
Property #2				
B2-LP01	20-Ma03651	External, Eastern Portion, toilet doors and door frames - Blue paint	Non-lead based paint (0.10% w/w)	N/A
B2-LP02	20-Ma03652	Shop 1, toilets door frames - Cream paint	Non-lead based paint (0.01% w/w)	N/A
B3-LP01	20-Ma03653	Shop 7/8, toilets door frames - Dark blue paint	Non-lead based paint (0.01% w/w)	N/A
B3-LP02	20-Ma03654	Shop 10, toilet door frames - Cream paint	**Lead based paint (0.17% w/w)**	Good
B3-LP03	20-Ma03655	Shop 9, toilet door frames - Blue/green paint	Non-lead based paint (0.06% w/w)	N/A
Property #3				
B4-LP01	20-Ma03656	Unit 1, toilet door and door frames - Blue paint	Non-lead based paint (0.04% w/w)	N/A
B4-LP02	20-Ma03657	Unit 2, toilet door and door frames - White paint	Non-lead based paint (0.03% w/w)	N/A
Property #4				
B5-LP01	20-Ma03658	Funeral Home, exterior eaves, windows and door frames - White paint	**Lead based paint (3.6% w/w)**	Fair
B5-LP02	20-Ma03659	Garage, exterior, gutters and downpipes - Red paint	**Lead based paint (0.71% w/w)**	Fair
B5-LP03	20-Ma03660	Funeral Home, south office, walls - Blue paint	Non-lead based paint (0.08% w/w)	N/A
B5-LP04	20-Ma03661	Funeral Home, western exterior, window frames - Cream paint	**Lead based paint (0.12% w/w)**	Fair
Property #5				
B6-LP01	20-Ma03662	Ground floor, toilets, doors and door frames - Purple paint	Non-lead based paint (0.06% w/w)	N/A
B6-LP02	20-Ma03663	Exterior, east stairs to first floor, metal pole - White paint	**Lead based paint (0.12% w/w)**	Fair
B6-LP03	20-Ma03664	First floor, female toilet, cabinet - White paint	Non-lead based paint (0.05% w/w)	N/A
B6-LP04	20-Ma03665	First floor, male and female toilet, walls - Brown paint	Non-lead based paint (0.04% w/w)	N/A
B6-LP05	20-Ma03666	First floor, east office, walls - Cream paint	Non-lead based paint (0.04% w/w)	N/A
Property #6				
B7-LP01	20-Ma03667	Toilets, door and door frame -Maroon paint	**Lead based paint (0.16% w/w)**	Good
B7-LP02 (reported as B2-LD02 in Appendix C)	20-Ma05679	Ceiling cavity, steel framework to roof – Red paint	**Lead based paint (0.89% w/w)**	Fair

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4.1.5 Polychlorinated Biphenyls

PCB containing capacitors were confirmed to be present to the fluorescent lights in Suite 4 of Property #1. Detailed inspection of capacitors in all other light fittings could not be undertaken due to the electricity supply to the fittings being active. Therefore, PCB containing capacitors are assumed to be present within all light fittings throughout the site.

4.1.6 Synthetic Mineral Fibres

Suspected SMF materials were identified in various forms throughout the site. Full details of all identified SMF materials are provided in the Hazardous Materials Register (**Appendix A**). The typical forms of SMF identified are summarised below:

- Internal insulation to hot water systems;
- Insulation to roof sarking within ceiling cavities; and
- Insulation to air conditioning ducting.

4.2 Inaccessible Areas

There is potential for additional hazardous materials to be contained within inaccessible areas of the site as outlined in the following points:

- Property #1, Suite 2 – This tenancy was locked and unable to be accessed at the time of inspection.
- Property #2, Shop 3 – This tenancy was locked and unable to be accessed at the time of inspection.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

5. Conclusions and Recommendations

Based on the scope of this assessment and with reference to the limitations included in **Section 6**, the following conclusions are made with respect to the Hazardous Materials Survey completed.

5.1 Hazardous Materials

Identified and suspected hazardous building materials were observed throughout the site as a result of visual identification and laboratory analysis. A number of the identified hazardous building materials present a significant exposure risk to current and future site occupants, maintenance workers/contractors and demolition workers if they are not appropriately managed/removed. It is recommended that a hazardous materials management plan be prepared for the site detailing the procedures for the management and removal of the identified hazardous materials to be implemented prior to and for the duration of the proposed demolition works.

The following broad recommendations are made for the removal of the identified hazardous materials to potentially mitigate harmful effects as a result of the proposed works program. Further detail on the appropriate removal and management methods for identified and suspected hazardous building materials shall be included in the site hazardous materials management plan. The person with management or control of the site, must ensure so far as is reasonably practicable that the identified hazardous materials are removed prior to the commencement of the proposed demolition works.

The identified and suspected hazardous materials are presented in the Hazardous Materials Register included as **Appendix A**.

5.1.1 Asbestos Containing Materials

5.1.1.1 Friable Asbestos Containing Dusts

Friable asbestos impacted dusts have been identified within the ceiling cavities of Property #2 (Western Portion) and Property #5 as well as to the ceiling cavity and internal areas of Property #6. Prior to the commencement of any demolition works it is recommended that the following work is undertaken:

- Access to the ceiling cavities of Property #2 (Western Portion) and Property #5, and the entirety of Property #6 shall be immediately restricted and appropriate asbestos warning signage installed to access/egress points to inform personnel of the known asbestos hazards for the interim period and until asbestos removal works can be completed.

  In the event that access to these areas is required, care should be taken to avoid any activities that may disturb the identified friable asbestos hazards. Personal protective equipment (PPE) shall be adopted to preclude potential inhalation exposures to dusts, including – as a minimum – P2 half face respirators and disposable coveralls worn by any persons who require to enter the friable ACD impacted areas, with appropriate decontamination procedures implemented when exiting the identified friable ACD impacted areas.

- The identified friable ACD hazards will be disturbed as part of the proposed demolition works and must therefore be appropriately removed by a Class A licensed asbestos removal contractor in accordance with the requirements of *Work Health and Safety Act (*2011), *Work Health and Safety Regulation* (2017) and SWNSW 2019a prior to any demolition works commencing. An asbestos removal control plan is to be developed by the engaged Class A licensed asbestos removalist prior to the removal works, outlining the specific removal methodologies and control measures necessary to minimise any risk from exposure to asbestos.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- A permit to remove friable asbestos application shall be submitted to SafeWork NSW by the engaged Class A contractor prior to works commencing. No asbestos removal works may commence until receipt of the approved friable asbestos removal work permit from SafeWork NSW.
- Asbestos waste and asbestos impacted waste materials shall be disposed of to an appropriately licensed landfill in accordance with the *Waste Classification Guidelines Part 1: Classifying Waste* (NSW EPA, 2014).
- Air monitoring is required to be conducted during the removal of the friable asbestos impacted dusts and following their completion (clearance monitoring, see **Section 5.1.1.3**) by an independent Licensed Asbestos Assessor (LAA).

5.1.1.2 Non-Friable Asbestos Containing Materials

Non-friable ACM has been identified in various forms throughout the site. Prior to the demolition of the structures it is recommended that the following work is undertaken in conjunction with the friable ACD removal works detailed in **Section 5.1.1.1** above:

- A Class A licensed asbestos removalist shall be engaged to remove all asbestos containing materials as identified in the Hazardous Materials Register (**Appendix A**). Removal and disposal of non-friable asbestos materials shall be undertaken in accordance with the *Work Health and Safety Act (*2011), *Work Health and Safety Regulation* (2017) and SWNSW 2019a.
- While not mandatory during the removal of non-friable ACM, it is considered best practice that asbestos air monitoring is also undertaken by the independent LAA during all non-friable asbestos removal works, given the amount of friable ACD identified throughout the site.

5.1.1.3 Clearance Certification

- Following completion of friable and/or non-friable asbestos removal works within each structure, a clearance inspection shall be undertaken by the independent LAA to ensure that the all asbestos containing materials identified in the Hazardous Materials Register (**Appendix A**) have been removed to a satisfactory industry standard.
- Clearance air monitoring is required to be undertaken as part of the clearance inspection following the removal of the friable asbestos hazards. The results of the clearance air monitoring will form part of the clearance certification.
- Following the completion of the clearance inspection, a clearance certificate shall be issued by the LAA to confirm that the identified non-friable asbestos hazards and/or friable asbestos hazards have been successfully removed and that each structure is suitable for proposed demolition or refurbishment works to commence.

5.1.2 Lead Containing Dust

Elevated levels of lead in dust above the adopted site criteria were identified at the site. A suitably experienced hazardous materials removal contractor should be engaged to remove the lead containing dust in accordance with the AS4361.2-2017 prior to the commencement of any demolition works. It is anticipated that the majority of the lead dust hazards will be removed in conjunction with the friable ACD removal works outlined in **Section 5.1.1.1**.

5.1.3 Lead Based Paints

The lead based paints, as identified in Hazardous Materials Register (**Appendix A**), ranged in condition from good to poor and should be managed in accordance with the AS4361.2-2017. Where peeling or deteriorated they should be removed under controlled conditions by an experienced contractor prior to demolition works. Stable lead based paints adhered to building fabric can be

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

removed as general solid waste provided care is taken to minimise any potential for paint flakes to be dispersed onto ground surfaces.

5.1.4 Synthetic Mineral Fibres

The synthetic mineral fibres encountered during this inspection were generally contained and deemed to be low risk. These SMF materials can be removed with the building and demolition waste with care taken not to generate fibres. Appropriate PPE is recommended including the use of P2 respirator as minimum and appropriate removal methodology as outlined in [NOHSC: 1004(1990)] and [NOHSC: 2006(1990)].

5.1.5 Polychlorinated Biphenyls

The identified PCB containing light fittings within Suite 4 of Property #1 should be removed and disposed of as Scheduled Waste. All other fluorescent light fittings throughout the site should also be removed and disposed of as Scheduled Waste or re-inspected once isolated from the electrical system to confirm the presence or absence of PCB capacitors.

5.2 Inaccessible Areas

Areas inaccessible during the current HBMS should be inspected by a suitably qualified competent person prior to any works commencing. Suspected ACM should be sampled by a suitably qualified competent person prior to any works commencing.

5.3 Unexpected Finds

Any materials deemed to be consistent with those detailed in the Hazardous Materials Register that have not been previously identified should be assumed to have the same content and be treated accordingly.

Should any additional suspected hazardous materials be observed during or prior to demolition works, works should cease until a suitably qualified occupational hygienist can assess the suspected hazardous material and provide appropriate recommendations for management and/or removal.

Version: 1, Version Date: 14/04/2021

6. Limitations

This report has been prepared for use by the client who has commissioned the works in accordance with the project brief only, and has been based in part on information obtained from the client and other parties.

The advice herein relates only to this project and all results conclusions and recommendations made should be reviewed by a competent person with experience in environmental investigations, before being used for any other purpose.

JBS&G accepts no liability for use or interpretation by any person or body other than the client who commissioned the works. This report should not be reproduced without prior approval by the client, or amended in any way without prior approval by JBS&G, and should not be relied upon by other parties, who should make their own enquiries.

Sampling and chemical analysis of environmental media is based on appropriate guidance documents made and approved by the relevant regulatory authorities. Conclusions arising from the review and assessment of environmental data are based on the sampling and analysis considered appropriate based on the regulatory requirements.

Limited sampling and laboratory analyses were undertaken as part of the investigations undertaken, as described herein. Ground conditions between sampling locations and media may vary, and this should be considered when extrapolating between sampling points. Chemical analytes are based on the information detailed in the site history. Further chemicals or categories of chemicals may exist at the site, which were not identified in the site history and which may not be expected at the site.

Changes to the subsurface conditions may occur subsequent to the investigations described herein, through natural processes or through the intentional or accidental addition of contaminants. The conclusions and recommendations reached in this report are based on the information obtained at the time of the investigations.

This report does not provide a complete assessment of the environmental status of the site, and it is limited to the scope defined herein. Should information become available regarding conditions at the site including previously unknown sources of contamination, JBS&G reserves the right to review the report in the context of the additional information.

Attention:	Stuart Lumsden
Report	705518-AID
Project Name	PENRITH
Project ID	58140
Received Date	Mar 03, 2020
Date Reported	Mar 10, 2020

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name PENRITH
Project ID 58140
Date Sampled Mar 03, 2020
Report 705518-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
B1-A01	20-Ma03541	Mar 03, 2020	Approximate Sample 3g / 65x45x3mm Sample consisted of: Creamy-white flexible vinyl-like sheet	No asbestos detected. Synthetic mineral fibre detected. No trace asbestos detected.
B1-A02	20-Ma03542	Mar 03, 2020	Approximate Sample 1g / 25x10x3mm Sample consisted of: Brown fibre cement fragments and white paint	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B1-A03	20-Ma03543	Mar 03, 2020	Approximate Sample <1g / 20x10x3mm Sample consisted of: a) White flexible vinyl-like material b) Black bituminous back layer	Chrysotile and amosite asbestos detected (b).
B1-A04	20-Ma03544	Mar 03, 2020	Approximate Sample <1g / 20x20x4mm Sample consisted of: Grey compressed fibre cement fragments	Chrysotile asbestos detected.
B1-A05	20-Ma03545	Mar 03, 2020	Approximate Sample 29g / 120x40x5mm Sample consisted of: Grey compressed fibre cement fragment	Chrysotile asbestos detected.
B1-A06	20-Ma03546	Mar 03, 2020	Approximate Sample 1g / 20x10x9mm Sample consisted of: a) Grey compressed fibre cement fragment b) Grey paint	Chrysotile asbestos detected.
B1-A07	20-Ma03547	Mar 03, 2020	Approximate Sample 2g / 40x15x4mm Sample consisted of: a) Grey compressed fibre cement fragment b) Cream-white paint	Chrysotile, amosite and crocidolite asbestos detected (a).
B2-A01	20-Ma03548	Mar 03, 2020	Approximate Sample 1g / 25x10x5mm Sample consisted of: a) Grey compressed fibre cement fragments b) Brown paint	Chrysotile and amosite asbestos detected (a).

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
B2-A02	20-Ma03549	Mar 03, 2020	Approximate Sample <1g / 25x10x4mm Sample consisted of: Brown fibre cement fragments with blue paint	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B2-A03	20-Ma03550	Mar 03, 2020	Approximate Sample <1g / 20x10x3mm Sample consisted of: Brown fibre cement fragments with grey paint	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B3-A01	20-Ma03551	Mar 03, 2020	Approximate Sample 1g / 30x15x3mm Sample consisted of: Brown-grey flexible vinyl-like fragment with brown adhesive	No asbestos detected. Synthetic mineral fibre detected. No trace asbestos detected.
B3-A02	20-Ma03552	Mar 03, 2020	Approximate Sample 2g / 35x10x3mm Sample consisted of: Grey flxible vinyl-like fragment with brown adhesive	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B3-A03	20-Ma03553	Mar 03, 2020	Approximate Sample 1g / 30x15x3mm Sample consisted of: Black bituminous-like material	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B3-A04	20-Ma03554	Mar 03, 2020	Approximate Sample 2g / 20x10x10mm Sample consisted of: Grey fibre cement fragment	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B3-A05	20-Ma03555	Mar 03, 2020	Approximate Sample <1g / 20x10x3mm Sample consisted of: Brown fibre cement fragments with grey paint	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B3-A06	20-Ma03556	Mar 03, 2020	Approximate Sample 3g / 40x20x10mm Sample consisted of: Black fibrous bituminous material	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B4-A01	20-Ma03557	Mar 03, 2020	Approximate Sample 1g / 20x15x3mm Sample consisted of: Blue-white flexible vinyl-like fragment with fibrous material attached	No asbestos detected. Synthetic mineral fibre detected. Organic fibre detected. No trace asbestos detected.
B4-A02	20-Ma03558	Mar 03, 2020	Approximate Sample 2g / 40x10x5mm Sample consisted of: Brown fibre cement fragments and green paint	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B5-A01	20-Ma03559	Mar 03, 2020	Approximate Sample 5g / 40x20x5mm Sample consisted of: a) Grey compressed fibre cement fragment b) Green - pink paint	Chrysotile and amosite asbestos detected (a).
B5-A02	20-Ma03560	Mar 03, 2020	Approximate Sample 1g / 25x10x3mm Sample consisted of: Black bituminous fibrous material	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B5-A03	20-Ma03561	Mar 03, 2020	Approximate Sample 1g / 20x15x4mm Sample consisted of: Grey fibre cement fragments	No asbestos detected. Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
B5-A04	20-Ma03562	Mar 03, 2020	Approximate Sample 21g / 55x50x5mm Sample consisted of: a) Grey compressed fibre cement fragment b) Brown paint	Chrysotile and amosite asbestos detected.
B5-A05	20-Ma03563	Mar 03, 2020	Approximate Sample 2g / 30x10x3mm Sample consisted of: Red brittle vinyl-like fragment and white fibrous bundles attached with adhesive	Chrysotile asbestos detected.
B5-A06	20-Ma03564	Mar 03, 2020	Approximate Sample 8g / 100x50x4mm Sample consisted of: Black bituminous fibrous material with brown soft fibrous material	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B5-A07	20-Ma03565	Mar 03, 2020	Approximate Sample 1g / 50x5x5mm Sample consisted of: Metalic wire coated with tan fibrus material	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B5-A08	20-Ma03566	Mar 03, 2020	Approximate Sample 1g / 30x5x4mm Sample consisted of: Metalic wire coated with black bituminous-like fibrous material	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B5-A09	20-Ma03567	Mar 03, 2020	Approximate Sample 6g / 30x15x10mm Sample consisted of: Tan hard mastic-like fragments	No asbestos detected. No trace asbestos detected.
B6-A01	20-Ma03568	Mar 03, 2020	Approximate Sample 2g / 40x20x3mm Sample consisted of: Grey semi-hard vinyl-like material and brown plaster-like cement material	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B6-A02	20-Ma03569	Mar 03, 2020	Approximate Sample 2g / 50x20x3mm Sample consisted of: Brown-white flexible vinyl-like fragment	No asbestos detected. Synthetic mineral fibre detected. No trace asbestos detected.
B6-A03	20-Ma03570	Mar 03, 2020	Approximate Sample 2g / 70x25x3mm Sample consisted of: Tan-white flexible vinyl-like fragment	No asbestos detected. Synthetic mineral fibre detected. No trace asbestos detected.
B6-A04	20-Ma03571	Mar 03, 2020	Approximate Sample 12g / 50x35x5mm Sample consisted of: a) Grey compressed fibre cement fragment b) Brown paint	Chrysotile, amosite and crocidolite asbestos detected (a).
B6-A05	20-Ma03572	Mar 03, 2020	Approximate Sample <1g / 20x10x3mm Sample consisted of: Grey fibre cement fragments and grey paint	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B6-A06	20-Ma03583	Mar 03, 2020	Approximate Sample 1g / 20x15x5mm Sample consisted of: Grey compressed fibre cement fragment	Chrysotile and amosite asbestos detected.
B6-A07	20-Ma03584	Mar 03, 2020	Approximate Sample 2g / 50x10x4mm Sample consisted of: Black bitumen-like material	No asbestos detected. Organic fibre detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
B7-A01	20-Ma03585	Mar 03, 2020	Approximate Sample 2g / 30x15x4mm Sample consisted of: Grey compressed fibre cement fragment	Chrysotile and crocidolite asbestos detected.
B7-A02	20-Ma03586	Mar 03, 2020	Approximate Sample 7g / 40x20x5mm Sample consisted of: Grey compressed fibre cement fragment	Chrysotile, amosite and crocidolite asbestos detected.
B7-A03	20-Ma03587	Mar 03, 2020	Approximate Sample <1g / 20x10x3mm Sample consisted of: Grey fibre cement fragments	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B7-A04	20-Ma03588	Mar 03, 2020	Approximate Sample <1g / 10x10x3mm Sample consisted of: a) Grey compressed fibre cement fragments b) White paint	Chrysotile, amosite and crocidolite asbestos detected (a).
B7-A05	20-Ma03589	Mar 03, 2020	Approximate Sample 1g / 15x10x5mm Sample consisted of: Black soft fibrous bituminous material and yellow paint	No asbestos detected. Organic fibre detected.
B7-A06	20-Ma03618	Mar 03, 2020	Approximate Sample 1g / 20x10x3mm Sample consisted of: Black fibrous bituminus material	No asbestos detected. Organic fibre detected.
B1-AD01	20-Ma03619	Mar 03, 2020	Approximate Sample 1g / 70x10x3mm Sample consisted of: Black fibrous bituminous material	Chrysotile asbestos detected.
B1-AD02	20-Ma03620	Mar 03, 2020	Approximate Sample 1g / 60x30x3mm Sample consisted of: Brown dust and debris	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No trace asbestos detected.
B2-AD01	20-Ma03621	Mar 03, 2020	Approximate Sample <1g / 20x10x3mm Sample consisted of: Brown fibrous plaster-like material, corroded metal and fibres	No asbestos detected. Organic fibre detected. No trace asbestos detected.
B3-AD02	20-Ma03622	Mar 03, 2020	Approximate Sample 6g/60x30x5mm Sample consisted of: Brown dust and debris	Chrysotile asbestos detected in the form of loose fibre bundle. Approximate raw weight of asbestos containing material = 0.00010g* Total estimated asbestos content in the sample = 0.00010g* Total estimated asbestos concentration = 0.0017% w/w* No asbestos detected at the reporting limit of 0.01% w/w. Synthetic mineral fibre detected. Organic fibre detected. No trace asbestos detected.
B3-AD03	20-Ma03623	Mar 03, 2020	Approximate Sample 1g/30x20x3mm Sample consisted of: Brown dust and debris	No asbestos detected at the reporting limit of 0.01% w/w. Synthetic mineral fibre detected. Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
B3-AD04	20-Ma03624	Mar 03, 2020	Approximate Sample 1g/10x10x2mm Sample consisted of: Brown dust and debris	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No trace asbestos detected.
B4-AD01	20-Ma03625	Mar 03, 2020	Approximate Sample 1g / 50x20x3mm Sample consisted of: Brown dust, debris, plaster material and wood chips	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No trace asbestos detected.
B4-AD02	20-Ma03626	Mar 03, 2020	Approximate Sample 1g/5x5x2mm Sample consisted of: Brown dust, debris, plaster cement	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No trace asbestos detected.
B5-AD01	20-Ma03627	Mar 03, 2020	Approximate Sample 3g / 35x20x5mm Sample consisted of: Brown dust, debris, white paper-like material and grey concrete cement	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No trace asbestos detected.
B5-AD02	20-Ma03628	Mar 03, 2020	Approximate Sample 1g/30x20x3mm Sample consisted of: Brown dust and debris	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No trace asbestos detected.
B5-AD03	20-Ma03629	Mar 03, 2020	Approximate Sample 18g/100x30x10mm Sample consisted of: Brown dust and debris	No asbestos detected at the reporting limit of 0.01% w/w. Synthetic mineral fibre detected. Organic fibre detected. No trace asbestos detected.
B6-AD01	20-Ma03630	Mar 03, 2020	Approximate Sample 1g/20x20x3mm Sample consisted of: Brown dust and debris	Crocidolite asbestos detected in weathered fibre cement fragment. Approximate raw weight of asbestos containing material = 0.0012g Total estimated asbestos content in the sample = 0.00084g* Total estimated asbestos concentration = 0.12% w/w* Organic fibre detected. No trace asbestos detected.
B7-AD01	20-Ma03631	Mar 03, 2020	Approximate Sample 1g/20x10x3mm Sample consisted of: Brown dust and debris	Chrysotile asbestos detected in the form of loose fibre bundle. Approximate raw weight of asbestos = 0.00030g* Total estimated asbestos content in the sample = 0.00029g* Total estimated asbestos concentration = 0.057% w/w* Organic fibre detected. No trace asbestos detected.
B7-AD02	20-Ma03632	Mar 03, 2020	Approximate Sample 8g/50x30x5mm Sample consisted of: Brown dust, debris, corroded metal, glass fragments, fibrous material	Crocidolite asbestos detected in the form of loose fibre bundle. Approximate raw weight of asbestos = 0.00020g* Total estimated asbestos content in the sample = 0.00019g* Total estimated asbestos concentration = 0.0025% w/w* No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
B3-AD01	20-Ma05678	Mar 03, 2020	Approximate Sample 1g / 20x10x3mm Sample consisted of: Brown dust and debris	No asbestos detected at the reporting limit of 0.01% w/w. Synthetic mineral fibre detected. Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Asbestos - LTM-ASB-8020	Sydney	Mar 10, 2020	Indefinite
Asbestos - LTM-ASB-8020	Sydney	Mar 10, 2020	Indefinite

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Sample is dried by heating prior to analysis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Reference document for the NEPM. Government of Western Australia, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009), including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil (2011)
NEPM	National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended)
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded and/or sound condition. For the purposes of the NEPM, ACM is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
AF	Asbestos Fines. Asbestos containing materials, including friable, weathered and bonded materials, able to pass a 7mm x 7mm sieve. Considered under the NEPM as equivalent to “non-bonded / friable”.
FA	Fibrous Asbestos. Asbestos containing materials in a friable and/or severely weathered condition. For the purposes of the NEPM, FA is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres in the matrix.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	N/A
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N/A	Not applicable

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Lead (% w/w)	Sydney	Mar 09, 2020	6 Month
- Method: E022.5 - ACID EXTRACTABLE METALS IN PAINT IN LIQUID AND POWDERED FORM BY ICP-MS ANALYSIS			
Heavy Metals	Sydney	Mar 09, 2020	180 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram | **mg/L:** milligrams per litre | **ug/L:** micrograms per litre

ppm: Parts per million | **ppb:** Parts per billion | **%:** Percentage

org/100mL: Organisms per 100 millilitres | **NTU:** Nephelometric Turbidity Units | **MPN/100mL:** Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.3
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 20-130% Phenols & 50-150% PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.3 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Lab Sample ID	QA Source	Units	Result 1	Result 2	RPD	Acceptance Limits	Pass Limits	Qualifying Code

EXECUTIVE SUMMARY

Geo-Logix Pty Ltd was engaged by Penrith City Council to conduct a Preliminary Environmental Site Assessment (ESA) of the property located at 134 - 138 Henry Street, Penrith NSW. The objective of the Preliminary ESA was to conduct a site inspection and collate site historical information in order to establish whether activities have occurred on site which may have resulted in contamination of land. As a portion of the site is occupied by a dry cleaning business, a preliminary assessment was undertaken to assess the presence / absence of contamination associated with operation of the dry cleaner.

The site is located within the Penrith CBD and is accessed by Henry Street from the north, Gaymark Lane to the east and Allen Place to the south. The site consists of two roughly rectangular lots, encompassing an area of 301 m^2. A two storey brick building occupies the entire site and is constructed on a concrete slab at grade. Potential asbestos containing material was observed in the building materials during the site inspection. At the time of inspection, the site was occupied by numerous businesses and shops on both levels. A dry cleaner currently occupies Shop 3, located on the corner of Henry Street and Gaymark Lane.

The review of historical data indicates the following site history:

- Prior to the 1950s, the site appeared to be a cleared, vacant property;
- The site was initially developed in the 1950s and appeared to be used for the stockpiling of unknown materials;
- The current building was constructed in the 1960s with title records noting various leases recorded for shops within the building since this time; and
- Council records indicate a dry cleaner has operated in Shop 3 since 1977.

To assess for ground contamination originating from dry cleaner activities, Geo-Logix installed two sub-slab passive soil vapour samplers beneath the dry cleaning store. The samplers were retrieved approximately 48 hours after deployment on 21 July 2016 and were transferred to NATA accredited SGS Leeder laboratories for analysis of VOCs.

Tetrachloroethene (PCE), historically used as a dry cleaning fluid at the site, was detected in soil beneath the dry cleaner shop at concentrations in excess of soil vapour assessment criteria for commercial land use. The highest concentrations were recorded in proximity to the location of the former dry cleaning machine. Trichloroethene (TCE) and cis-1.2 dichloroethene (DCE) were also detected in soil gas at concentrations greater than commercial land use criteria. TCE and DCE are degradation products of PCE.

Petroleum compounds benzene, xylenes and toluene were also detected in soil vapour at concentrations above laboratory reporting limits but below commercial land use criteria. The origin of the petroleum compounds is unknown.

An exceedence of soil vapour assessment criteria indicates potential exists for chemicals in the ground to migrate into indoor air of the overlying shops where they are inhaled by occupants at concentrations that can cause adverse health effects (vapour intrusion pathway). Further investigation would be required to determine if the vapour intrusion pathway exists.

Geo-Logix recommends a preliminary Conceptual Site Model (CSM) and Sampling Analysis Plan (SAP) is developed to identify potential receptors of contamination sourced from the dry cleaner and guide further assessment works to evaluate potential vapour intrusion risks. The CSM is a representation of site-related information regarding contamination sources and the pathways by which contaminants may migrate through various media and impact upon human and environmental receptors.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

The historical review and site inspection also identified the following potential sources of contamination at and in the vicinity of the site:

- Fill of unknown origin; and
- A former off-site service station across Gaymark Lane to the east.

Further investigation would be required to determine the presence or otherwise of such contamination.

1. INTRODUCTION

Geo-Logix Pty Ltd (Geo-Logix) was engaged by Penrith City Council (Council) to conduct a Preliminary Environmental Site Assessment (ESA) of the property located at 134 - 138 Henry Street, Penrith NSW. (Figure 1).

The objective of the Preliminary ESA was to conduct a site inspection and collate site historical information in order to establish whether activities have occurred on site which may have resulted in contamination of land. As a portion of the site is occupied by a dry cleaning business, limited sampling was undertaken to assess the presence / absence of contamination associated operation of the dry cleaner.

The findings of the report are based on a review of historical site data, site inspection and limited sampling conducted on 19 July 2016.

2. SITE INFORMATION

2.1 Site Identification

The investigation area comprises the following properties:

Street Address	Lot and Deposited Plan (DP)	Approximate Area (m^2)
134-138 Henry Street, Penrith 2750	Lot 1 DP 252457 Lot 1 DP164798	301

2.2 Site Zoning and Land Use

Under Penrith Local Environment Plan (LEP) (2010), the site is zoned Commercial Core (B3). Planning and Development Certificates are provided in Attachment A.

2.3 Site Description

The following descriptions are based on a site inspection conducted by Geo-Logix on 19 July 2016. A photographic log is presented in Attachment B.

The site is located within a commercial area on the southern side of Henry Street, Penrith, NSW. The site consists of two roughly rectangular lots, encompassing an area of 301 m^2 (Figure 2). The site is accessed by Henry Street from the north, Gaymark Lane to the east and Allen Place to the south. A two storey brick building occupies the entire site and is constructed on a concrete slab at grade. A suspended awning extends around the front of the building with potential asbestos containing material observed in some building materials. At the time of inspection, the site was occupied by numerous businesses and shops on both levels.

Ground floor shops comprised the following:

- **Shop 1:** Shop 1, located on the corner of Gaymark Lane and Allen Place, was unoccupied at the time of the inspection but previously operated as a café. No obvious signs of contaminating activities were observed during the site inspection.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- **Shop 2:** Shop 2, located in the centre of the building, currently operates as a café. No obvious signs of contaminating activities were observed during the site inspection.
- **Shop 3**: Shop 3, located on the corner of Henry Street and Gaymark Lane, is currently occupied by a dry cleaner. The front portion of the shop contains the customer counter and index conveyor with clothes press, electric boiler and rotor cabinet located in the central and rear portion of the shop. Greg Nott of Raine and Horne Penrith, indicated the dry cleaning machine located in the south east corner of the shop was replaced in 2015. A cooling tower for the dry cleaning machine was located outside of the site. Various containers of dry cleaning chemicals were stored throughout the shop.

Upstairs businesses comprised a lawyer, education centre, health / therapy clinic and a small office space for a cleaning company. No contaminating activities in these offices were observed during the site inspection.

2.4 Surrounding Land Use

Based on observations during the site inspection and from aerial imagery, the surrounding land use comprised the following:

- **North** – Henry Street with a construction site beyond;
- **South** – Allen Place with a council carpark and commercial properties beyond;
- **East** – Gaymark Place with commercial properties beyond; and
- **West** – Commercial properties.

2.5 Topography

The site appears to have been levelled relative to surrounding topography which slopes slightly down towards the west.

2.6 Surface Water

The nearest surface water, located approximately 380 m south-west of the site, is a concrete line channel that drains to Peach Tree Creek.

2.7 Geology

Review of the NSW 1:100,000 Penrith Geological Map (Geological Survey of NSW, 1991) indicates the site is situated on the quaternary age Cranebrook formation characterised by gravel, sand, silt and clay.

2.8 Hydrogeology

It is expected that groundwater would follow the natural regional topography and generally flow west towards the Nepean River.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Reference to the NSW Water Groundwater Works Report (NSW Government, 2016) indicates there is one registered groundwater bore (GW111989) within a 500 m radius of the site. The bore is located at the service station on Worth Street, approximately 490 m west of the site and is registered for monitoring purposes. Groundwater was recorded from 7.5 to 9 meters below grade (mbg).

The groundwater bore map is presented in Attachment C.

2.9 Acid Sulphate Soils

The site is not located within an acid sulphate soil risk area.

2.10 Underground Utilities

A Dial Before You Dig search was conducted to determine the presence of underground utilities which may act as conduits for contamination migration both onsite and offsite (Attachment D). The plans indicate:

- Sydney Water utilities run below Henry Street along the northern site boundary and through the southern portion of the site;
- NBN utilities run underneath Henry Street and enter the site from the north;
- Optus utilities run below Henry Street to the north;
- Endeavour and Jemena services run below Henry Street to the north and Allen Place to the south; and
- Telstra utilities and PIPE Networks run underneath Henry Street and Gaymark Lane and enter the site from Gaymark Lane;

3. PREVIOUS INVESTIGATIONS

No previous environmental reports were provided to Geo-Logix at the time of reporting.

4. SITE HISTORY

The following information has been reviewed to determine historical land use and assess the likelihood of potentially contaminating activities having occurred at the site:

- Current and historical title deeds;
- Historical aerial photographs;
- Penrith Council Section 149 Planning Certificate and historical records;
- NSW WorkCover Dangerous Goods Licence records;
- NSW Office of Environment and Heritage (OEH) contaminated land database and public register for regulated contaminated sites;
- Protection of Environment Operations Act 1997 Public Register; and
- List of NSW Contaminated Sites Notified to OEH.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4.1 Title Search

A title deeds search was conducted through the Land Titles Office which is summarised below. Title documents are presented in Attachment E.

Period	Lot 1 DP 164798
1889 - 1947	Francis Henry Woodriff, gentleman
1947 - 1947	Charles William Owen Roberts, electrician
1947 - 1978	Geoffrey Howard Upton, boot repairer / retired garage proprietor
1978 - 2001	Various corporate owners, site uses not noted
2001 to Current	Penrith City Council (current owners)
Period	**Lot 1 DP 252457**
Prior to 1976	Crown Land
1976 - 1978	Geoffrey Howard Upton, boot repairer / garage proprietor
1978 - 2001	Various corporate owners, site uses not noted
2001 to Current	Penrith City Council (current owners)

A number of various leases are shown on title documents however activities undertaken by lessees could not be identified.

4.2 Aerial Photograph Review

Geo-Logix undertook a review of historical aerial photographs on record at the New South Wales Land and Property Management Authority. Photos were examined for the years 1943, 1956, 1965, 1975, 1986 and 1994. A Google Earth image was examined for the years 2004 and 2015. Photos are presented in Attachment F.

Aerial 1943

Area	Description
Site	The site is vacant and appears grassed.
Surroundings	A laneway runs along the rear of the site which is surrounded by vacant land with mixed residential and commercial properties.

Aerial 1956

Area	Description
Site	The site has been partially developed. The use of the site could not be determined but appears to have been partially fenced and material stockpiled within the fenced area. A possible concrete pad is located to the north of the fenced area.
Surroundings	A possible service station has been constructed to the east of the site with another commercial building constructed to the south of the service station. The commercial building appeared associated with the development on the subject site.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Aerial 1965

Area	Description
Site	The material stockpiles have been removed and the current building constructed.
Surroundings	The current carpark to the south of the site has been developed and additional bowsers observed at the service station to the east. An informal road passes between the site and the service station. The ground surface to on the adjacent lot to the west appeared disturbed.

Aerial 1975

Area	Description
Site	The site appears unchanged from the previous photograph.
Surroundings	Gaymark Lane has been formalised with the adjacent service station demolished and used as a car park. The current elevated carpark has been constructed to the south. The vacant lot to the west has been developed with a commercial building.

Aerial 1986

Area	Description
Site	The site appears unchanged from the previous photograph.
Surroundings	The former service station / carpark site to the east of Gaymark Lane has been developed into a commercial property

Aerial 1994

Area	Description
Site	The site appears unchanged from the previous photograph.
Surroundings	Surrounding land use appears similar to the previous photograph with the exception of a commercial high-rise constructed across Henry Street to the north.

Aerial 2004

Area	Description
Site	The site appears unchanged from the previous photograph.
Surroundings	Appears unchanged from the previous photograph.

Aerial 2016

Area	Description
Site	The site appears unchanged from the previous photograph.
Surroundings	Appears unchanged from the previous photograph.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4.3 Liverpool Council Records

Council Records

A search of Penrith Council records identified a number of historical development consents for the site. Council were unable to release the documents, with the exception of a site plan for the dry cleaner in Shop 3 (Attachment G), but provided the following summary:

Development Consent	Description	Date
DA15/0794	Use as an education centre and signage	14/09/2016
D8230 DA1	Occupation of existing premises of a refreshment room	23/10/2015
DA15/0565	Fit out & use as a café	03/07/2015
DA11/1027	Use as a Café	11/11/2011
20/15/2-F472	Dry Cleaners	08/09/1977
20/15/2-F448	Commercial Use	31/08/1977

Section 149 Planning Certificates

Review of Planning Certificates under Section 149 of the Environmental Planning and Assessment Act (1979) indicates the following for the site:

- The land is not proclaimed to be a mine subsidence district;
- Development on the land is subject to flood related development controls;
- Council has not been advised that the land is subject to any notifications under the Contaminated Land Management Act; and
- The land is affected by the Asbestos Policy adopted by council.

4.4 NSW WorkCover Dangerous Goods Licences

A search of the WorkCover Stored Chemical Information Database was undertaken to identify any dangerous goods storage licences held for the subject site. No records were identified the property. Search records are presented in Attachment H.

4.5 NSW OEH Contaminated Land Record

A review of the NSW OEH Contaminated Land Record established under Section 58 of the Contaminated Land Management Act 1997 found no records for the site or within 500 m. The search record is presented in Attachment I.

4.6 Protection of Environment Operations Act 1997 Public Register

A search of the public register established under Section 308 of the Protection of the Environment Operations Act 1997 (POEO Act) found no records for the site or within 500 m. The search record is presented in Attachment J.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4.7 NSW Contaminated Sites Notified to NSW EPA

A search of the List of NSW Contaminated Sites Notified to NSW EPA, found no records for the site or within 500 m. The search record is presented in Attachment K.

4.8 Unexploded Ordinance

A search of the Australian Department of Defence unexploded ordinance (UXO) register did not identify records for the site. The search record is presented in Attachment L.

5. SITE HISTORY SUMMARY

The review of historical data indicates the following site history:

- Prior to the 1950s, the site appeared to be a cleared, vacant property;
- The site was initially developed in the 1950s and appeared to be used for the stockpiling of unknown materials;
- The current building was constructed in the 1960s. Title records noting various leases recorded for shops within the property since this time; and
- Council records indicate a dry cleaner has operated in Shop 3 since 1977.

6. POTENTIAL SITE CONTAMINATION

A site inspection and review of the site history have identified the following potential contamination issues:

6.1 Dry Cleaners

Historical records indicate the shop in the northern portion of the site has operated as a drycleaners from 1977 to present. Potential exists for chlorinated hydrocarbon contamination to soil, groundwater and soil vapour originating from dry cleaning chemicals. The primary dry cleaning chemical perchloroethene (PCE) can biodegrade to trichloroethene (TCE), 1.2 dichloroethene (DCE), and vinyl chloride (VC). Due to the volatile nature of these chemicals, they can partition into a gas phase which can migrate into the indoor air of overlying buildings, the inhalation of which may potentially present a chronic health risk. Primary contaminants of potential concern (COPC) associated with dry cleaning operations include:

- PCE;
- TCE;
- DCE; and
- VC.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

6.2 Fill of Unknown Origin

In addition to minor levelling of the site, historical imagery indicates the site was used for the stockpiling of unknown material. As such, the presence of fill beneath the building cannot be ruled out. COPC associated with fill of unknown origin comprise:

- Total Recoverable Hydrocarbons (TRH);
- Benzene Toluene Ethylbenzene and Xylenes (BTEX);
- Organochlorine Pesticides (OCPs);
- Polychlorinated Biphenyls (PCBs);
- Polycyclic Aromatic Hydrocarbons (PAHs);
- Heavy metals; and
- Asbestos

6.3 Off-site Contamination Sources

Aerial photographs indicate the property beyond Gaymark Lane to the east, previously operated as a service station from at least the 1950s to 1970s. The property was developed into commercial retail shop in the 1980s. Geo-Logix cannot rule out the potential for off-site contamination to have impacted the subject site without conducting further investigations given the history of underground petroleum storage on the adjacent property and the ability for petroleum to migrate across site boundaries either in soil, groundwater or soil vapour. COPC associated with service stations include:

- Petroleum hydrocarbons (TRH/BTEX)
- Polycyclic Aromatic Hydrocarbons (PAHs);
- Volatile Organic Hydrocarbons (VOCs); and
- Heavy Metals.

7. SOIL VAPOUR ASSESSMENT

A limited assessment of was undertaken to assess for ground contamination resulting from use of the site as a dry cleaners. On 19 July 2016, two sub-slab passive soil vapour samplers (SSV1 and SSV2) were installed below the concrete slab within the dry cleaning store. Passive gas samplers absorb evaporative organic contaminants at known uptake rates. Using the sample period and uptake rates the contaminant concentration in soil gas can be determined. Reported concentrations of soil gas can then be compared against health based screening levels.

7.1 Soil Vapour Sampling Methodology

Assessment for the presence of volatile contaminants beneath the dry cleaning shop was completed in accordance with the following methodology:

- After clearing underground services, the concrete slab was cut using a 25 mm diameter concrete core to access sub-slab soils. Sample location SSV1 was located adjacent to the

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

former dry cleaning machine with sample location SSV2 located in the central portion of the shop for general site coverage;

- Soil borings were advanced approximately 100 mm below the slab into the sub-slab fill using the 25 mm core barrel;
- Waterloo Membrane Passive Gas Samplers (WMS) lowered into each boring using string to approximately 50 mm from the bottom of the bore. The bottom of the samplers were fitted with a stainless steel wire coil to protect the membrane from contacting soil during deployment. Bores were sealed using a plastic film wrapped playdough as a plug to prevent atmospheric breakthrough;
- A field blank sample was deployed during the installation process to assess the concentration of COPC in ambient air within the shop. The results were used to determine if background concentrations in air in the shop could be up-taken by the passive samplers during installation; and
- Samplers were retrieved approximately 48 hours after deployment on 21 July 2016. Samplers were placed in plastic screw top bottles, sealed with Teflon tape and transferred under chain of custody to NATA accredited SGS Leeder laboratories for analysis of VOCs.

Soil vapour field sampling logs are presented in Attachment M.

7.2 Assessment Criteria

The primary reference for environmental site assessment in Australia is the Amended Assessment of Site Contamination (ASC) National Environmental Protection Measure (NEPM) 1999 (NEPC, as amended 2013). This document includes soil, soil vapour and groundwater criteria for use in evaluating potential contamination risk to human health and the environment.

The application of these investigation levels and screening levels is subject to a range of limitations and their selection and use must be in the context of the conceptual site model (CSM) relating to the nature and distribution of impacts and potential exposure pathways. Each relevant guideline is discussed further below and the adopted screening criteria are presented in summary sample analytical tables attached to this report.

NEPM (2013) Health Screening Levels D (HSLs D)

HSLs are Tier 1 risk based generic soil vapour assessment criteria used for the assessment of potential risks to human health from chronic inhalation exposure of subsurface petroleum vapours (Vapour Risk). They are intentionally conservative and based on a reasonable worst-case scenario for generic soil types, contamination depth and land use settings including Residential (HSLs A/B), Open Space / Recreational (HSLs C) and Commercial / Industrial (HSLs D).

HSLs D vapour assessment criteria for sand geology was adopted on the basis the site is commercial and material below the slab is likely to be bedding sands.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

NEPM (2013) Interim Soil Vapour Health Investigation Levels (HILs)

NEPM Interim soil vapour health investigation levels for chlorinated hydrocarbon chemicals are Tier 1 risk based generic soil vapour assessment criteria used for the assessment of potential risks to human health from chronic inhalation exposure of subsurface chlorinated hydrocarbon vapours (Vapour Risk). They are intentionally conservative and can be adopted for the purpose of screening sites where further investigation is required on a site specific basis under Residential (HSLs A / B), Open Space / Recreational (HSLs C) and Commercial / Industrial (HSLs D) exposure scenarios. Application of the interim HILs is based on measurement of shallow (<1 mbg) soil vapour or sub-slab vapour.

HILs D vapour assessment criteria was adopted on the basis the site is commercial.

7.3 Quality Assurance / Quality Control

Quality assurance procedures for soil vapour sampling included:

- Dedicated passive vapour sampler for each bore;
- Changing disposable gloves between sample locations;
- Placing samples immediately on ice following sampling; and
- Ensuring analysis was performed within recommended holding times.

Field QC sampling comprised the following:

Sample Identification	Sample Type	Sample Matrix	Rate of Collection
Blank	Field Blank	Soil Vapour	1 per Sampling Round

8. INVESTIGATION RESULTS

8.1 Site Geology

Due to the vapour sampler installation methodology used, the nature of material below the slab could not be determined.

8.2 Soil Vapour Analytical Results

Soil vapour analytical results are summarised in Table 1. Laboratory reports are presented in Attachment N.

VOCs

- PCE was detected at concentrations above the assessment criteria in soil vapour samples SSV1 and SSV2 (Table 1).
- TCE was detected at concentrations above the assessment criteria in soil vapour samples SSV1 and SSV2.
- Cis-1.2 DCE was detected at concentrations above the assessment criteria in soil vapour samples SSV1 and SSV2.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Trans-1.2 DCE was detected at concentrations above laboratory reporting limits in soil vapour samples from vapour well SSV1.
- Chloroform was detected at concentrations above laboratory reporting limits in soil vapour sample SSV1.
- Benzene, m&p xylenes and toluene were detected at concentrations above the laboratory reporting limits but below assessment criteria in soil vapour sample SSV1.

All other VOCs analysed were not detected at concentrations above laboratory reporting limits.

9. DISCUSSION

Dry cleaning chemical PCE, and its degradation products TCE and DCE, were detected at concentrations significantly greater than the assessment criteria in soil vapour beneath the concrete slab in Shop 3. The highest vapour concentrations were recorded in proximity to the former dry cleaning machine.

Petroleum compounds benzene, xylenes and toluene were also detected in soil vapour at concentrations above laboratory reporting limits but below commercial land use criteria. The origin of the petroleum compounds is unknown.

10. CONCLUSIONS AND RECOMMENDATIONS

Results of the historical review indicates the site and surrounds has had a history of commercial land use. Review of historical documents indicates that prior to 1950, the site was vacant before been used to stockpile unknown material. The current building was constructed in the 1960s and has been occupied by a number of business since this time. A dry cleaner has operated in Shop 3 from 1977.

Given the operation of dry cleaner in Shop 3, a limited soil vapour investigation was undertaken to determine the presence or otherwise of dry cleaning chemicals beneath the shop. PCE, a common dry cleaner solvent, and its degradation products TCE and DCE, were detected in soil vapour below the floor of the dry cleaner at concentrations in excess of commercial land use assessment criteria. PCE, TCE and DCE gas can migrate into indoor air of overlying buildings and potentially present a chronic inhalation health risk to building occupants. This process is referred to as vapour intrusion. Further investigation would be required to determine if the vapour intrusion pathway is complete and a potential risk of harm exists.

Geo-Logix recommends a preliminary Conceptual Site Model (CSM) and Sampling Analysis Plan (SAP) be developed to identify potential receptors of contamination and guide further assessment works to evaluate potential vapour intrusion risks. The CSM is a representation of site-related information regarding contamination sources and the pathways by which contaminants may migrate through various media and impact upon human and environmental receptors.

The historical review and site inspection also identified the following potential sources of contamination at the site:

- Fill of unknown origin; and
- A former off-site service station across Gaymark Lane to the east.

Further investigation would be required to determine the presence or otherwise of such contamination.

11. LIMITATIONS

This report sets out the findings of a preliminary site investigation by Geo-Logix. A detailed site assessment is required before any conclusions may be drawn as to the:

- presence, identity and extent of specific substances, or
- suitability of the Site for any specific use, or category of use, or
- approvals, if any, that may be needed in respect of any use or category of use, or
- level of remediation, if any, that is warranted to render the Site suitable for any specific use, or category of use.

This report should be read in full, and no executive summary, conclusion or other section of the report may be used or relied on in isolation, or taken as representative of the report as a whole. No responsibility is accepted by Geo-Logix, and any duty of care that would or may arise but for this statement is excluded, in relation to any use of any part of this report other than on this basis.

This report has been prepared for the sole benefit of and use by the Client. No other person may rely on the report for any purpose whatsoever except with Geo-Logix's express written consent which shall not be unreasonably withheld. Any duty of care to third parties that may arise in respect of persons other than the Client, but for this statement, is excluded.

Geo-Logix owns the copyright in this report. No copies of this report are to be made or distributed by any person without express written consent to do so from Geo-Logix which shall not be unreasonably withheld.

If the Client provides a copy of this report to a third party, without Geo-Logix's consent, the Client indemnifies Geo-Logix against all loss, including without limitation consequential loss, damage and/or liability, howsoever arising, in connection with any use or reliance by a Third Party.

The works undertaken by Geo-Logix are based solely on the scope of works, as agreed by the Client (**Scope of Works**). No other investigations, sampling, monitoring works or reporting will be carried out other than as expressly provided in the Scope of Works. **A COPY OF THE SCOPE OF WORKS IS AVAILABLE ON REQUEST.**

The conclusions stated in this report are based solely on the information, Scope of Works, analysis and data that are stated or expressly referred to in this report.

To the extent that the information and data relied upon to prepare this report has been conveyed to Geo-Logix by the Client or third parties orally or in the form of documents, Geo-Logix has assumed that the information and data are completely accurate and has not sought independently to verify the accuracy of the information or data. Geo-Logix assumes no responsibility or duty of care in respect of any errors or omissions in the information or data provided to it.

Geo-Logix assumes no responsibility in respect of any changes in the condition of the Site which have occurred since the time when Geo-Logix gathered data and/or took samples from the Site on its site inspections dated **19 July 2015**.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Given the nature of asbestos, and the difficulties involved in identifying asbestos fibres, despite the exercise of all reasonable due care and diligence, thorough investigations may not always reveal its presence in either buildings or fill. Even if asbestos has been tested for and those tests' results do not reveal the presence of asbestos at those specific points of sampling, asbestos or asbestos containing materials may still be present at the Site, particularly if fill has been imported at any time, buildings constructed prior to 1970 have been demolished on the Site or materials from such buildings have been disposed of on the Site.

Geo-Logix has not investigated any off site conditions, including the extent if any to which substances in the Site may be emanating off Site, and if so whether any adjoining sites have been or may be impacted by contamination originating from the Site.

Geo-Logix has prepared this report with the diligence, care and skill which a reasonable person would expect from a reputable environmental consultancy and in accordance with environmental regulatory authority and industry standards, guidelines and assessment criteria applicable as at the date of this report. Industry standards and environmental criteria change frequently, and may change at any time after the date of this report.

DESCRIPTION OF LAND

County: CUMBERLAND **Parish: CASTLEREAGH**

Location: 134-138 Henry Street PENRITH NSW 2750
Land Description: Lot 1 DP 164798

- PART 1 PRESCRIBED MATTERS –

In accordance with the provisions of Section 149(2) of the Act the following information is furnished in respect of the abovementioned land:

1 *NAMES OF RELEVANT PLANNING INSTRUMENTS AND DCPs*

1(1) The name of each environmental planning instrument that applies to the carrying out of development on the land:

Penrith Local Environmental Plan 2010, published 22nd September 2010, as amended, applies to the land.

Sydney Regional Environmental Plan No.9 - Extractive Industry (No.2), gazetted 15 September 1995, as amended, applies to the local government area of Penrith.

Sydney Regional Environmental Plan No. 20 - Hawkesbury-Nepean River (No. 2 - 1997), gazetted 7 November 1997, as amended, applies to the local government area of Penrith (except land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies).

The following State environmental planning policies apply to the land (subject to the exclusions noted below):
State Environmental Planning Policy No.1 - Development Standards. (Note: This policy does not apply to the land to which Penrith Local Environmental Plan 2010 or State Environmental Planning Policy (Western Sydney Employment Area) 2009 apply.)
State Environmental Planning Policy No.19 - Bushland in Urban Areas. (Note: This policy does not apply to certain land referred to in the National Parks and Wildlife Act 1974 and the Forestry Act 1916.)
State Environmental Planning Policy No.21 - Caravan Parks.
State Environmental Planning Policy No.30 - Intensive Agriculture.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

State Environmental Planning Policy No.32 - Urban Consolidation (Redevelopment of Urban Land). (Note: This policy does not apply to land identified as coastal protection, environmental protection, escarpment, floodway, natural hazard, non-urban, rural, rural residential, water catchment or wetland.)
State Environmental Planning Policy No.33 - Hazardous and Offensive Development.
State Environmental Planning Policy No.50 - Canal Estate Development. (Note: This policy does not apply to the land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies.
State Environmental Planning Policy No.55 - Remediation of Land.
State Environmental Planning Policy No.62 - Sustainable Aquaculture.
State Environmental Planning Policy No.64 - Advertising and Signage.
State Environmental Planning Policy No.65 - Design Quality of Residential Apartment Development.
State Environmental Planning Policy No.70 - Affordable Housing (Revised Schemes).
State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 (Note: This policy applies to land within New South Wales that is land zoned primarily for urban purposes or land that adjoins land zoned primarily for urban purposes, but only as detailed in clause 4 of the policy.)
State Environmental Planning Policy (Building Sustainability Index: BASIX) 2004.
State Environmental Planning Policy (Major Development) 2005.
State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007.
State Environmental Planning Policy (Miscellaneous Consent Provisions) 2007.
State Environmental Planning Policy (Infrastructure) 2007.
State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.
State Environmental Planning Policy (Affordable Rental Housing) 2009.
State Environmental Planning Policy (State and Regional Development) 2011.

1(2) The name of each proposed environmental planning instrument that will apply to the carrying out of development on the land and that is or has been the subject of community consultation or on public exhibition under the Act:

The Planning Proposal for Penrith City Park seeks to amend Penrith Local Environmental Plan 2010 to rezone certain land in Station Street and Henry Street to B4 Mixed Use to expand the range of land uses within the vicinity of the future Penrith City Park. See www.penrithcity.nsw.gov.au <http://www.penrithcity.nsw.gov.au> for more information.

Draft State Environmental Planning Policy (Infrastructure) Amendment (Shooting Ranges) 2013 applies to the land.

1(3) The name of each development control plan that applies to the carrying out of development on the land:

Penrith Development Control Plan 2014 applies to the land.

2 *ZONING AND LAND USE UNDER RELEVANT LEPs*

For each environmental planning instrument or proposed instrument referred to in clause 1 (other than a SEPP or proposed SEPP) that includes the land in any zone (however described):

2(a)-(d) the identity of the zone; the purposes that may be carried out without development consent; the purposes that may not be carried out except with development consent; and the purposes that are prohibited within the zone. Any zone(s) applying to the land is/are listed below and/or in annexures.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

(Note: If no zoning appears in this section see section 1(1) for zoning and land use details (under the Sydney Regional Environmental Plan or State Environmental Planning Policy that zones this property).)

Zone B3 Commercial Core
(Penrith Local Environmental Plan 2010)

1 Objectives of zone

- To provide a wide range of retail, business, office, entertainment, community and other suitable land uses that serve the needs of the local and wider community.
- To encourage appropriate employment opportunities in accessible locations.
- To maximise public transport patronage and encourage walking and cycling.
- To strengthen the role of Penrith City Centre as the business, retail and cultural centre for the region.

2 Permitted without consent

Nil

3 Permitted with consent

Amusement centres; Car parks; Child care centres; Commercial premises; Community facilities; Educational establishments; Entertainment facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Function centres; Helipads; Hotel or motel accommodation; Information and education facilities; Medical centres; Mortuaries; Passenger transport facilities; Places of public worship; Recreation areas; Recreation facilities (indoor); Registered clubs; Respite day care centres; Restricted premises; Roads: Sex services premises; Signage; Tourist and visitor accommodation; Veterinary hospitals

4 Prohibited

Bed and breakfast accommodation; Farm stay accommodation; Any other development not specified in item 2 or 3

Flood planning

All or part of the subject land is identified in Penrith Local Environmental Plan 2010 (PLEP 2010) Clause 7.2 Flood Planning. Development consent is required for any development on land to which Clause 7.2 of PLEP 2010 applies.

Additional information relating to Penrith Local Environmental Plan 2010

Note 1: Under the terms of Clause 2.4 of Penrith Local Environmental Plan 2010 development may be carried out on unzoned land only with development consent.

Note 2: Under the terms of Clause 2.6 of Penrith Local Environmental Plan 2010 land may be subdivided but only with development consent, except for the exclusions detailed in the clause.

Note 3: Under the terms of Clause 2.7 of Penrith Local Environmental Plan 2010 the demolition of a building or work may be carried out only with development consent.

Note 4: A temporary use may be permitted with development consent subject to the requirements of Clause 2.8 of Penrith Local Environmental Plan 2010.

Telephone: 02 4732 7777
Facsimile: 02 4732 7958

Email: pencit@penrithcity.nsw.gov.au

Note 5: Under the terms of Clause 4.1A of Penrith Local Environmental Plan 2010, despite any other provision of this plan, development consent must not be granted for dual occupancy on an internal lot in Zone R2 Low Density Residential.

Note 6: Under the terms of Clause 5.1 of Penrith Local Environmental Plan 2010 development on land acquired by an authority of the State under the owner-initiated acquisition provisions may, before it is used for the purpose for which it is reserved, be carried out, with development consent, for any purpose.

Note 7: Under the terms of Clause 5.3 of Penrith Local Environmental Plan 2010 development consent may be granted to development of certain land for any purpose that may be carried out in an adjoining zone.

Note 8: Under the terms of Clause 5.9 of Penrith Local Environmental Plan 2010 trees or other vegetation subject to relevant sections of Penrith Development Control Plan 2014 must not be ringbarked, cut down, topped, lopped, removed, injured or wilfully destroyed without the authority conferred by a development consent or a Council permit.

Note 9: Under the terms of Clause 5.9AA of Penrith Local Environmental Plan 2010 (PLEP 2010) any tree or other vegetation that is not of a species or kind prescribed for the purposes of Clause 5.9 of PLEP 2010 by Penrith Development Control Plan 2014 may be ringbarked, cut down, topped, lopped, removed, injured or destroyed without development consent.

Note 10: Clause 5.10 of Penrith Local Environmental Plan 2010 details when development consent is required/not required in relation to heritage conservation.

Note 11: Under the terms of Clause 5.11 of Penrith Local Environmental Plan 2010 bush fire hazard reduction work authorised by the *Rural Fires Act 1997* may be carried out on any land without development consent.

Note 12: Under the terms of Clause 7.1 of Penrith Local Environmental Plan 2010 (PLEP 2010) development consent is required for earthworks unless the work is exempt development under PLEP 2010 or another applicable environmental planning instrument, or the work is ancillary to other development for which development consent has been given.

Note 13: Sex services premises and restricted premises may only be permitted subject to the requirements of Clause 7.23 of Penrith Local Environmental Plan 2010.

2(e) whether any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed:

(Information is provided in this section only if any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed.)

2(f) whether the land includes or comprises critical habitat:

(Information is provided in this section only if the land includes or comprises critical habitat.)

2(g) whether the land is in a conservation area (however described):

(Information is provided in this section only if the land is in a conservation area (however described).)

2(h) whether an item of environmental heritage (however described) is situated on the land:

(Information is provided in this section only if an item of environmental heritage (however described) is situated on the land.)

2A ZONING AND LAND USE UNDER STATE ENVIRONMENTAL PLANNING POLICY (SYDNEY REGION GROWTH CENTRES) 2006

(Information is provided in this section only if the land is within any zone under State Environmental Planning Policy (Sydney Region Growth Centres) 2006.)

3 COMPLYING DEVELOPMENT

GENERAL HOUSING CODE

(The General Housing Code only applies if the land is within Zones R1, R2, R3, R4 or RU5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the General Housing Code **may** be carried out on the land if the land is within one of the abovementioned zones.

RURAL HOUSING CODE

(The Rural Housing Code only applies if the land is within Zones RU1, RU2, RU3, RU4, RU6 or R5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the Rural Housing Code **may** be carried out on the land if the land is within one of the abovementioned zones.

HOUSING ALTERATIONS CODE

Complying development under the Housing Alterations Code **may** be carried out on the land.

GENERAL DEVELOPMENT CODE

Complying development under the General Development Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL ALTERATIONS CODE

Complying development under the Commercial and Industrial Alterations Code **may** be carried out on the land.

SUBDIVISIONS CODE

Complying development under the Subdivisions Code **may** be carried out on the land.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

DEMOLITION CODE

Complying development under the Demolition Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL (NEW BUILDINGS AND ADDITIONS) CODE

(The Commercial and Industrial (New Buildings and Additions) Code only applies if the land is within Zones B1, B2, B3, B4, B5, B6, B7, B8, IN1, IN2, IN3, IN4 or SP3 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the Commercial and Industrial (New Buildings and Alterations) Code **may** be carried out on the land if the land is within one of the abovementioned zones.

FIRE SAFETY CODE

Complying development under the Fire Safety Code **may** be carried out on the land.

(NOTE: (1) Council has relied on Planning and Infrastructure Circulars and Fact Sheets in the preparation of this information. Applicants should seek their own legal advice in relation to this matter with particular reference to State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.

(2) Penrith Local Environmental Plan 2010 (if it applies to the land) contains additional complying development not specified in State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.)

4 COASTAL PROTECTION

The land is not affected by the operation of sections 38 or 39 of the Coastal Protection Act 1979, to the extent that council has been so notified by the Department of Public Works.

5 MINE SUBSIDENCE

The land is not proclaimed to be a mine subsidence district within the meaning of section 15 of the Mine Subsidence Compensation Act 1961.

6 ROAD WIDENING AND ROAD REALIGNMENT

The land is not affected by any road widening or road realignment under:
(a) Division 2 of Part 3 of the Roads Act 1993, or
(b) an environmental planning instrument, or
(c) a resolution of council.

7 COUNCIL AND OTHER PUBLIC AUTHORITY POLICIES ON HAZARD RISK RESTRICTIONS

(a) Council Policies
The land is affected by the Asbestos Policy adopted by Council.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

The land is not affected by any other policy adopted by the council that restricts the development of the land because of the likelihood of land slip, bushfire, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

(b) Other Public Authority Policies

The Bush Fire Co-ordinating Committee has adopted a Bush Fire Risk Management Plan that covers the local government area of Penrith City Council, and includes public, private and Commonwealth lands.

The land is not affected by a policy adopted by any other public authority and notified to the council for the express purpose of its adoption by that authority being referred to in planning certificates issued by the council, that restricts the development of the land because of the likelihood of land slip, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

7A FLOOD RELATED DEVELOPMENT CONTROLS INFORMATION

(1) Development on the land or part of the land for the purposes of dwelling houses, dual occupancies, multi dwelling housing or residential flat buildings (not including development for the purposes of group homes or seniors housing) (if such uses are permissible on the land) is subject to flood related development controls.

(2) Development on the land or part of the land for industrial or commercial purposes (if such uses are permissible on the land) is subject to flood related development controls.

Development on the land or part of the land for purposes other than industrial or commercial, or for purposes other than those referred to in (1) above, will be considered on a merits based approach and flood related development controls may apply.

Note: The land is subject to Penrith Development Control Plan 2014 Section C3.5 Flood Planning. On application and payment of the prescribed fee Council may be able to provide in writing a range of advice in regard to the extent of flooding affecting the property.

8 LAND RESERVED FOR ACQUISITION

No environmental planning instrument or proposed environmental planning instrument referred to in clause 1 makes provision in relation to the acquisition of the land by a public authority, as referred to in section 27 of the Act.

9 CONTRIBUTIONS PLANS

The Cultural Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith.

The Penrith City Local Open Space Development Contributions Plan 2007 applies anywhere residential development is permitted within the City of Penrith, excluding industrial areas and the release areas identified in Appendix B of the Plan (Penrith Lakes, Cranebrook, Sydney Regional Environmental Plan No. 30 - St Marys, Waterside, Thornton, the WELL Precinct, Glenmore Park and Erskine Park). See <http://www.penrithcity.nsw.gov.au/uploadedFiles/Content/Website/Our_Services/Planning_and_Development/Planning__Zoning_Information/Local_Planning_Documents/LocalOpenSpaceDCP(1).pdf>

Email: pencit@penrithcity.nsw.gov.au

The Penrith City District Open Space Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith, with the exclusion of industrial lands and the Penrith Lakes development site.

The Penrith City Centre Civic Improvement Plan applies to the land.

9A BIODIVERSITY CERTIFIED LAND

(Information is provided in this section only if the land is biodiversity certified land (within the meaning of Part 7AA of the *Threatened Species Conservation Act 1995*).)

10 BIOBANKING AGREEMENTS

(Information is provided in this section only if Council has been notified by the Director-General of the Department of Environment, Climate Change and Water that the land is land to which a biobanking agreement under Part 7A of the *Threatened Species Conservation Act 1995* relates.)

11 BUSH FIRE PRONE LAND

The land is not identified as bush fire prone land according to Council records.

12 PROPERTY VEGETATION PLANS

(Information is provided in this section only if Council has been notified that the land is land to which a property vegetation plan under the Native Vegetation Act 2003 applies.)

13 ORDERS UNDER TREES (DISPUTES BETWEEN NEIGHBOURS) ACT 2006

(Information is provided in this section only if Council has been notified that an order has been made under the Trees (Disputes Between Neighbours) Act 2006 to carry out work in relation to a tree on the land.)

14 DIRECTIONS UNDER PART 3A

(Information is provided in this section only if there is a direction by the Minister in force under section 75P(2)(c1) of the Act that a provision of an environmental planning instrument prohibiting or restricting the carrying out of a project or a stage of a project on the land under Part 4 of the Act does not have effect.)

15 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS AFFECTING SENIORS HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (seniors housing), of which the council is aware, issued under State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 18(2) of State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 have been imposed as a condition of consent to a development application granted after 11 October 2007 in respect of the land.)

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

16 SITE COMPATIBILITY CERTIFICATES FOR INFRASTRUCTURE

(Information is provided in this section only if there is a valid site compatibility certificate (infrastructure), of which council is aware, in respect of proposed development on the land.)

17 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS FOR AFFORDABLE RENTAL HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (affordable rental housing), of which the council is aware, in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 17(1) or 37(1) of State Environmental Planning Policy (Affordable Rental Housing) 2009 have been imposed as a condition of consent to a development application in respect of the land.)

18 PAPER SUBDIVISION INFORMATION

(Information is provided in this section only if a development plan adopted by a relevant authority applies to the land or is proposed to be subject to a consent ballot, or a subdivision order applies to the land.)

19 SITE VERIFICATION CERTIFICATES

(Information is provided in this section only if there is a current site verification certificate, of which council is aware, in respect of the land.)

NOTE: The following matters are prescribed by section 59(2) of the Contaminated Land Management Act 1997 as additional matters to be specified in a planning certificate

(a) (Information is provided in this section only if, as at the date of this certificate, the land (or part of the land) is significantly contaminated land within the meaning of the Contaminated Land Management Act 1997.)

(b) (Information is provided in this section only if, as at the date of this certificate, the land is subject to a management order within the meaning of the Contaminated Land Management Act 1997.)

(c) (Information is provided in this section only if, as at the date of this certificate, the land is the subject of an approved voluntary management proposal within the meaning of the Contaminated Land Management Act 1997.)

(d) (Information is provided in this section only if, at the date of this certificate, the land subject to an ongoing maintenance order within the meaning of the Contaminated Land Management Act 1997.)

(e) (Information is provided in this section only if the land is the subject of a site audit statement within the meaning of the Contaminated Land Management Act 1997 – a copy of which has been provided to Council.)

Note: Section 149(5) information for this property may contain additional information regarding contamination issues.

Note: The Environmental Planning and Assessment Amendment Act 1997 commenced operation on the 1 July 1998. As a consequence of this Act the information contained in this certificate needs to be read in conjunction with the provisions of the Environmental Planning and Assessment (Amendment) Regulation 1998, Environmental Planning and Assessment (Further Amendment) Regulation 1998 and Environmental Planning and Assessment (Savings and Transitional) Regulation 1998 and Environmental Planning and Assessment Regulation 2000.

Information is provided only to the extent that Council has been notified by relevant government departments.

149(5) Certificate
This Certificate is directed to the following relevant matters affecting the land

When information pursuant to section 149(5) is requested the Council is under no obligation to furnish any of the information supplied herein pursuant to that section. Council draws your attention to section 149(6) which states that a council shall not incur any liability in respect of any advice provided in good faith pursuant to sub-section (5). The absence of any reference to any matter affecting the land shall not imply that the land is not affected by any matter not referred to in this certificate.

Note:

- Council's 149(5) information does not include development consent or easement information. Details of development consents may be obtained by making enquiries with Council's Development Services Department pursuant to section 12 of the Local Government Act 1993 or (for development applications lodged after January 2007) by viewing the Online Services area at www.penrithcity.nsw.gov.au . Details of any easements may be obtained from a Title Search at Land and Property Information New South Wales.
- This certificate does not contain information relating to Complying Development Certificates.
- This certificate may not provide full details of development rights over the land.

* Threatened Species Conservation Act 1995
When considering any development application Council must have regard to the Threatened Species Conservation Act 1995. Please note that this legislation may have application to any land throughout the city. Interested persons should make their own enquiries in regard to the impact that this legislation could have on this land.

* Preservation of Trees and Vegetation
See Clauses 5.9 and 5.9AA of Penrith Local Environmental Plan 2010 and Chapter C2 of Penrith Development Control Plan 2014 for specific controls relating to the preservation of trees and vegetation.

* Development Control Plan General Information
Penrith Development Control Plan 2014 which applies to the land, sets out requirements for a range of issues that apply across the Penrith Local Government Area, including:

- Site Planning and Design Principles

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Vegetation Management
- Water Management
- Land Management
- Waste Management
- Landscape Design
- Culture and Heritage
- Public Domain
- Advertising and Signage
- Transport, Access and Parking
- Subdivision
- Noise and Vibration, and
- Infrastructure and Services.

The Development Control Plan also specifies requirements relating to various types of land uses including:

- Rural Land Uses
- Residential Development
- Commercial and Retail Development, and
- Industrial Development

as well as for a number of specific activities, including child care centres; health consulting rooms; educational establishments; parent friendly amenities; places of public worship; vehicle repair stations; cemeteries, crematoria and funeral homes; extractive industries; and telecommunication facilities.
The Development Control Plan also details requirements relating to key precincts within the Penrith Local Government Area, including:

- Caddens
- Claremont Meadows Stage 2
- Cranebrook
- Emu Heights
- Emu Plains
- Erskine Business Park
- Glenmore Park
- Kingswood
- Mulgoa Valley
- Orchard Hills
- Penrith
- Penrith Health and Education Precinct
- Riverlink Precinct
- St Clair, and
- St Marys / St Marys North.

Penrith Development Control Plan 2014 may be accessed at https://www.penrithcity.nsw.gov.au/Building-and-Development/Planning-and-Zoning/Planning-Controls/Development-Control-Plans/

DESCRIPTION OF LAND

County: CUMBERLAND **Parish: CASTLEREAGH**

Location: 134-138 Henry Street PENRITH NSW 2750
Land Description: Lot 1 DP 252457

- PART 1 PRESCRIBED MATTERS –

In accordance with the provisions of Section 149(2) of the Act the following information is furnished in respect of the abovementioned land:

1 *NAMES OF RELEVANT PLANNING INSTRUMENTS AND DCPs*

1(1) The name of each environmental planning instrument that applies to the carrying out of development on the land:

Penrith Local Environmental Plan 2010, published 22nd September 2010, as amended, applies to the land.

Sydney Regional Environmental Plan No.9 - Extractive Industry (No.2), gazetted 15 September 1995, as amended, applies to the local government area of Penrith.

Sydney Regional Environmental Plan No. 20 - Hawkesbury-Nepean River (No. 2 - 1997), gazetted 7 November 1997, as amended, applies to the local government area of Penrith (except land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies).

The following State environmental planning policies apply to the land (subject to the exclusions noted below):
State Environmental Planning Policy No.1 - Development Standards. (Note: This policy does not apply to the land to which Penrith Local Environmental Plan 2010 or State Environmental Planning Policy (Western Sydney Employment Area) 2009 apply.)
State Environmental Planning Policy No.19 - Bushland in Urban Areas. (Note: This policy does not apply to certain land referred to in the National Parks and Wildlife Act 1974 and the Forestry Act 1916.)
State Environmental Planning Policy No.21 - Caravan Parks.
State Environmental Planning Policy No.30 - Intensive Agriculture.

State Environmental Planning Policy (State and Regional Development) 2011.

1(2) The name of each proposed environmental planning instrument that will apply to the carrying out of development on the land and that is or has been the subject of community consultation or on public exhibition under the Act:

The Planning Proposal for Penrith City Park seeks to amend Penrith Local Environmental Plan 2010 to rezone certain land in Station Street and Henry Street to B4 Mixed Use to expand the range of land uses within the vicinity of the future Penrith City Park. See www.penrithcity.nsw.gov.au <http://www.penrithcity.nsw.gov.au> for more information.

Draft State Environmental Planning Policy (Infrastructure) Amendment (Shooting Ranges) 2013 applies to the land.

1(3) The name of each development control plan that applies to the carrying out of development on the land:

Penrith Development Control Plan 2014 applies to the land.

2 *ZONING AND LAND USE UNDER RELEVANT LEPs*

For each environmental planning instrument or proposed instrument referred to in clause 1 (other than a SEPP or proposed SEPP) that includes the land in any zone (however described):

2(a)-(d) the identity of the zone; the purposes that may be carried out without development consent; the purposes that may not be carried out except with development consent; and the purposes that are prohibited within the zone. Any zone(s) applying to the land is/are listed below and/or in annexures.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

(Note: If no zoning appears in this section see section 1(1) for zoning and land use details (under the Sydney Regional Environmental Plan or State Environmental Planning Policy that zones this property).)

Zone B3 Commercial Core
(Penrith Local Environmental Plan 2010)

1 Objectives of zone

- To provide a wide range of retail, business, office, entertainment, community and other suitable land uses that serve the needs of the local and wider community.
- To encourage appropriate employment opportunities in accessible locations.
- To maximise public transport patronage and encourage walking and cycling.
- To strengthen the role of Penrith City Centre as the business, retail and cultural centre for the region.

2 Permitted without consent

Nil

3 Permitted with consent

Amusement centres; Car parks; Child care centres; Commercial premises; Community facilities; Educational establishments; Entertainment facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Function centres; Helipads; Hotel or motel accommodation; Information and education facilities; Medical centres; Mortuaries; Passenger transport facilities; Places of public worship; Recreation areas; Recreation facilities (indoor); Registered clubs; Respite day care centres; Restricted premises; Roads: Sex services premises; Signage; Tourist and visitor accommodation; Veterinary hospitals

4 Prohibited

Bed and breakfast accommodation; Farm stay accommodation; Any other development not specified in item 2 or 3

Flood planning

All or part of the subject land is identified in Penrith Local Environmental Plan 2010 (PLEP 2010) Clause 7.2 Flood Planning. Development consent is required for any development on land to which Clause 7.2 of PLEP 2010 applies.

Additional information relating to Penrith Local Environmental Plan 2010

Note 1: Under the terms of Clause 2.4 of Penrith Local Environmental Plan 2010 development may be carried out on unzoned land only with development consent.

Note 2: Under the terms of Clause 2.6 of Penrith Local Environmental Plan 2010 land may be subdivided but only with development consent, except for the exclusions detailed in the clause.

Note 3: Under the terms of Clause 2.7 of Penrith Local Environmental Plan 2010 the demolition of a building or work may be carried out only with development consent.

Note 4: A temporary use may be permitted with development consent subject to the requirements of Clause 2.8 of Penrith Local Environmental Plan 2010.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

Note 5: Under the terms of Clause 4.1A of Penrith Local Environmental Plan 2010, despite any other provision of this plan, development consent must not be granted for dual occupancy on an internal lot in Zone R2 Low Density Residential.

Note 6: Under the terms of Clause 5.1 of Penrith Local Environmental Plan 2010 development on land acquired by an authority of the State under the owner-initiated acquisition provisions may, before it is used for the purpose for which it is reserved, be carried out, with development consent, for any purpose.

Note 7: Under the terms of Clause 5.3 of Penrith Local Environmental Plan 2010 development consent may be granted to development of certain land for any purpose that may be carried out in an adjoining zone.

Note 8: Under the terms of Clause 5.9 of Penrith Local Environmental Plan 2010 trees or other vegetation subject to relevant sections of Penrith Development Control Plan 2014 must not be ringbarked, cut down, topped, lopped, removed, injured or wilfully destroyed without the authority conferred by a development consent or a Council permit.

Note 9: Under the terms of Clause 5.9AA of Penrith Local Environmental Plan 2010 (PLEP 2010) any tree or other vegetation that is not of a species or kind prescribed for the purposes of Clause 5.9 of PLEP 2010 by Penrith Development Control Plan 2014 may be ringbarked, cut down, topped, lopped, removed, injured or destroyed without development consent.

Note 10: Clause 5.10 of Penrith Local Environmental Plan 2010 details when development consent is required/not required in relation to heritage conservation.

Note 11: Under the terms of Clause 5.11 of Penrith Local Environmental Plan 2010 bush fire hazard reduction work authorised by the *Rural Fires Act 1997* may be carried out on any land without development consent.

Note 12: Under the terms of Clause 7.1 of Penrith Local Environmental Plan 2010 (PLEP 2010) development consent is required for earthworks unless the work is exempt development under PLEP 2010 or another applicable environmental planning instrument, or the work is ancillary to other development for which development consent has been given.

Note 13: Sex services premises and restricted premises may only be permitted subject to the requirements of Clause 7.23 of Penrith Local Environmental Plan 2010.

2(e) whether any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed:

(Information is provided in this section only if any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed.)

2(f) whether the land includes or comprises critical habitat:

(Information is provided in this section only if the land includes or comprises critical habitat.)

2(g) whether the land is in a conservation area (however described):

(Information is provided in this section only if the land is in a conservation area (however described).)

2(h) whether an item of environmental heritage (however described) is situated on the land:

(Information is provided in this section only if an item of environmental heritage (however described) is situated on the land.)

2A ZONING AND LAND USE UNDER STATE ENVIRONMENTAL PLANNING POLICY (SYDNEY REGION GROWTH CENTRES) 2006

(Information is provided in this section only if the land is within any zone under State Environmental Planning Policy (Sydney Region Growth Centres) 2006.)

3 COMPLYING DEVELOPMENT

GENERAL HOUSING CODE
(The General Housing Code only applies if the land is within Zones R1, R2, R3, R4 or RU5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the General Housing Code **may** be carried out on the land if the land is within one of the abovementioned zones.

RURAL HOUSING CODE
(The Rural Housing Code only applies if the land is within Zones RU1, RU2, RU3, RU4, RU6 or R5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the Rural Housing Code **may** be carried out on the land if the land is within one of the abovementioned zones.

HOUSING ALTERATIONS CODE

Complying development under the Housing Alterations Code **may** be carried out on the land.

GENERAL DEVELOPMENT CODE

Complying development under the General Development Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL ALTERATIONS CODE

Complying development under the Commercial and Industrial Alterations Code **may** be carried out on the land.

SUBDIVISIONS CODE

Complying development under the Subdivisions Code **may** be carried out on the land.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

DEMOLITION CODE

Complying development under the Demolition Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL (NEW BUILDINGS AND ADDITIONS) CODE

(The Commercial and Industrial (New Buildings and Additions) Code only applies if the land is within Zones B1, B2, B3, B4, B5, B6, B7, B8, IN1, IN2, IN3, IN4 or SP3 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the Commercial and Industrial (New Buildings and Alterations) Code **may** be carried out on the land if the land is within one of the abovementioned zones.

FIRE SAFETY CODE

Complying development under the Fire Safety Code **may** be carried out on the land.

(NOTE: (1) Council has relied on Planning and Infrastructure Circulars and Fact Sheets in the preparation of this information. Applicants should seek their own legal advice in relation to this matter with particular reference to State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.

(2) Penrith Local Environmental Plan 2010 (if it applies to the land) contains additional complying development not specified in State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.)

4 COASTAL PROTECTION

The land is not affected by the operation of sections 38 or 39 of the Coastal Protection Act 1979, to the extent that council has been so notified by the Department of Public Works.

5 MINE SUBSIDENCE

The land is not proclaimed to be a mine subsidence district within the meaning of section 15 of the Mine Subsidence Compensation Act 1961.

6 ROAD WIDENING AND ROAD REALIGNMENT

The land is not affected by any road widening or road realignment under:
(a) Division 2 of Part 3 of the Roads Act 1993, or
(b) an environmental planning instrument, or
(c) a resolution of council.

7 COUNCIL AND OTHER PUBLIC AUTHORITY POLICIES ON HAZARD RISK RESTRICTIONS

(a) Council Policies
The land is affected by the Asbestos Policy adopted by Council.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

The land is not affected by any other policy adopted by the council that restricts the development of the land because of the likelihood of land slip, bushfire, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

(b) Other Public Authority Policies

The Bush Fire Co-ordinating Committee has adopted a Bush Fire Risk Management Plan that covers the local government area of Penrith City Council, and includes public, private and Commonwealth lands.

The land is not affected by a policy adopted by any other public authority and notified to the council for the express purpose of its adoption by that authority being referred to in planning certificates issued by the council, that restricts the development of the land because of the likelihood of land slip, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

7A FLOOD RELATED DEVELOPMENT CONTROLS INFORMATION

(1) Development on the land or part of the land for the purposes of dwelling houses, dual occupancies, multi dwelling housing or residential flat buildings (not including development for the purposes of group homes or seniors housing) (if such uses are permissible on the land) is subject to flood related development controls.

(2) Development on the land or part of the land for industrial or commercial purposes (if such uses are permissible on the land) is subject to flood related development controls.

Development on the land or part of the land for purposes other than industrial or commercial, or for purposes other than those referred to in (1) above, will be considered on a merits based approach and flood related development controls may apply.

Note: The land is subject to Penrith Development Control Plan 2014 Section C3.5 Flood Planning. On application and payment of the prescribed fee Council may be able to provide in writing a range of advice in regard to the extent of flooding affecting the property.

8 LAND RESERVED FOR ACQUISITION

No environmental planning instrument or proposed environmental planning instrument referred to in clause 1 makes provision in relation to the acquisition of the land by a public authority, as referred to in section 27 of the Act.

9 CONTRIBUTIONS PLANS

The Cultural Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith.

The Penrith City Local Open Space Development Contributions Plan 2007 applies anywhere residential development is permitted within the City of Penrith, excluding industrial areas and the release areas identified in Appendix B of the Plan (Penrith Lakes, Cranebrook, Sydney Regional Environmental Plan No. 30 - St Marys, Waterside, Thornton, the WELL Precinct, Glenmore Park and Erskine Park). See <http://www.penrithcity.nsw.gov.au/uploadedFiles/Content/Website/Our_Services/Planning_and_Development/Planning__Zoning_Information/Local_Planning_Documents/LocalOpenSpaceDCP(1).pdf>

The Penrith City District Open Space Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith, with the exclusion of industrial lands and the Penrith Lakes development site.

The Penrith City Centre Civic Improvement Plan applies to the land.

9A BIODIVERSITY CERTIFIED LAND

(Information is provided in this section only if the land is biodiversity certified land (within the meaning of Part 7AA of the *Threatened Species Conservation Act 1995*).)

10 BIOBANKING AGREEMENTS

(Information is provided in this section only if Council has been notified by the Director-General of the Department of Environment, Climate Change and Water that the land is land to which a biobanking agreement under Part 7A of the *Threatened Species Conservation Act 1995* relates.)

11 BUSH FIRE PRONE LAND

The land is not identified as bush fire prone land according to Council records.

12 PROPERTY VEGETATION PLANS

(Information is provided in this section only if Council has been notified that the land is land to which a property vegetation plan under the Native Vegetation Act 2003 applies.)

13 ORDERS UNDER TREES (DISPUTES BETWEEN NEIGHBOURS) ACT 2006

(Information is provided in this section only if Council has been notified that an order has been made under the Trees (Disputes Between Neighbours) Act 2006 to carry out work in relation to a tree on the land.)

14 DIRECTIONS UNDER PART 3A

(Information is provided in this section only if there is a direction by the Minister in force under section 75P(2)(c1) of the Act that a provision of an environmental planning instrument prohibiting or restricting the carrying out of a project or a stage of a project on the land under Part 4 of the Act does not have effect.)

15 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS AFFECTING SENIORS HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (seniors housing), of which the council is aware, issued under State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 18(2) of State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 have been imposed as a condition of consent to a development application granted after 11 October 2007 in respect of the land.)

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

16 SITE COMPATIBILITY CERTIFICATES FOR INFRASTRUCTURE

(Information is provided in this section only if there is a valid site compatibility certificate (infrastructure), of which council is aware, in respect of proposed development on the land.)

17 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS FOR AFFORDABLE RENTAL HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (affordable rental housing), of which the council is aware, in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 17(1) or 37(1) of State Environmental Planning Policy (Affordable Rental Housing) 2009 have been imposed as a condition of consent to a development application in respect of the land.)

18 PAPER SUBDIVISION INFORMATION

(Information is provided in this section only if a development plan adopted by a relevant authority applies to the land or is proposed to be subject to a consent ballot, or a subdivision order applies to the land.)

19 SITE VERIFICATION CERTIFICATES

(Information is provided in this section only if there is a current site verification certificate, of which council is aware, in respect of the land.)

NOTE: The following matters are prescribed by section 59(2) of the Contaminated Land Management Act 1997 as additional matters to be specified in a planning certificate

(a) (Information is provided in this section only if, as at the date of this certificate, the land (or part of the land) is significantly contaminated land within the meaning of the Contaminated Land Management Act 1997.)

(b) (Information is provided in this section only if, as at the date of this certificate, the land is subject to a management order within the meaning of the Contaminated Land Management Act 1997.)

(c) (Information is provided in this section only if, as at the date of this certificate, the land is the subject of an approved voluntary management proposal within the meaning of the Contaminated Land Management Act 1997.)

(d) (Information is provided in this section only if, at the date of this certificate, the land subject to an ongoing maintenance order within the meaning of the Contaminated Land Management Act 1997.)

(e) (Information is provided in this section only if the land is the subject of a site audit statement within the meaning of the Contaminated Land Management Act 1997 – a copy of which has been provided to Council.)

Note: Section 149(5) information for this property may contain additional information regarding contamination issues.

Note: The Environmental Planning and Assessment Amendment Act 1997 commenced operation on the 1 July 1998. As a consequence of this Act the information contained in this certificate needs to be read in conjunction with the provisions of the Environmental Planning and Assessment (Amendment) Regulation 1998, Environmental Planning and Assessment (Further Amendment) Regulation 1998 and Environmental Planning and Assessment (Savings and Transitional) Regulation 1998 and Environmental Planning and Assessment Regulation 2000.

Information is provided only to the extent that Council has been notified by relevant government departments.

149(5) Certificate
This Certificate is directed to the following relevant matters affecting the land

When information pursuant to section 149(5) is requested the Council is under no obligation to furnish any of the information supplied herein pursuant to that section. Council draws your attention to section 149(6) which states that a council shall not incur any liability in respect of any advice provided in good faith pursuant to sub-section (5). The absence of any reference to any matter affecting the land shall not imply that the land is not affected by any matter not referred to in this certificate.

Note:

- Council's 149(5) information does not include development consent or easement information. Details of development consents may be obtained by making enquiries with Council's Development Services Department pursuant to section 12 of the Local Government Act 1993 or (for development applications lodged after January 2007) by viewing the Online Services area at www.penrithcity.nsw.gov.au . Details of any easements may be obtained from a Title Search at Land and Property Information New South Wales.
- This certificate does not contain information relating to Complying Development Certificates.
- This certificate may not provide full details of development rights over the land.

* Threatened Species Conservation Act 1995

When considering any development application Council must have regard to the Threatened Species Conservation Act 1995. Please note that this legislation may have application to any land throughout the city. Interested persons should make their own enquiries in regard to the impact that this legislation could have on this land.

* Preservation of Trees and Vegetation

See Clauses 5.9 and 5.9AA of Penrith Local Environmental Plan 2010 and Chapter C2 of Penrith Development Control Plan 2014 for specific controls relating to the preservation of trees and vegetation.

* Development Control Plan General Information

Penrith Development Control Plan 2014 which applies to the land, sets out requirements for a range of issues that apply across the Penrith Local Government Area, including:

- Site Planning and Design Principles

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Vegetation Management
- Water Management
- Land Management
- Waste Management
- Landscape Design
- Culture and Heritage
- Public Domain
- Advertising and Signage
- Transport, Access and Parking
- Subdivision
- Noise and Vibration, and
- Infrastructure and Services.

The Development Control Plan also specifies requirements relating to various types of land uses including:

- Rural Land Uses
- Residential Development
- Commercial and Retail Development, and
- Industrial Development

as well as for a number of specific activities, including child care centres; health consulting rooms; educational establishments; parent friendly amenities; places of public worship; vehicle repair stations; cemeteries, crematoria and funeral homes; extractive industries; and telecommunication facilities.
The Development Control Plan also details requirements relating to key precincts within the Penrith Local Government Area, including:

- Caddens
- Claremont Meadows Stage 2
- Cranebrook
- Emu Heights
- Emu Plains
- Erskine Business Park
- Glenmore Park
- Kingswood
- Mulgoa Valley
- Orchard Hills
- Penrith
- Penrith Health and Education Precinct
- Riverlink Precinct
- St Clair, and
- St Marys / St Marys North.

Penrith Development Control Plan 2014 may be accessed at https://www.penrithcity.nsw.gov.au/Building-and-Development/Planning-and-Zoning/Planning-Controls/Development-Control-Plans/

22/06/2016	30/06/2016	01/07/2016

Address:
134-138 Henry Street
Penrith NSW 2750

Job Purpose: Excavation
Onsite Activity: Vertical Boring
Location of Workplace: Private Property
Location in Road: Not Supplied

- Check that the location of the dig site is correct. If not you must submit a new enquiry.
- Should the scope of works change, or plan validity dates expire, you must submit a new enquiry.
- Do NOT dig without plans. Safe excavation is your responsibility. If you do not understand the plans or how to proceed safely, please contact the relevant asset owners.

Notes/Description of Works:
Shallow boring <1m

Your Responsibilities and Duty of Care

- If plans are not received within 2 working days, contact the asset owners directly & quote their Sequence No.
- ALWAYS perform an onsite inspection for the presence of assets. Should you require an onsite location, contact the asset owners directly. Please remember, plans do not detail the exact location of assets.
- Pothole to establish the exact location of all underground assets using a hand shovel, before using heavy machinery.
- Ensure you adhere to any State legislative requirements regarding Duty of Care and safe digging requirements.
- If you damage an underground asset you MUST advise the asset owner immediately.
- By using this service, you agree to Privacy Policy and the terms and disclaimers set out at **www.1100.com.au**
- **For more information on safe excavation practices, visit www.1100.com.au**

Asset Owner Details

The assets owners listed below have been requested to contact you with information about their asset locations within 2 working days. Additional time should be allowed for information issued by post. It is **your responsibility** to identify the presence of any underground assets in and around your proposed dig site. Please be aware, that not all asset owners are registered with the Dial Before You Dig service, so it is **your responsibility** to identify and contact any asset owners not listed here directly.
** Asset owners highlighted by asterisks ** require that you visit their offices to collect plans.
# Asset owners highlighted with a hash require that you call them to discuss your enquiry or to obtain plans.

Endeavour Energy

WARNING

- **All electrical apparatus shall be regarded as live until proved de-energised.** Contact with live electrical apparatus will cause severe injury or death.
- In accordance with the *Electricity Supply Act 1995*, you are obliged to report any damage to Endeavour Energy Assets immediately by calling **131 003**.
- The customer must obtain a new set of plans from Endeavour Energy if work has not been started or completed within twenty **(20)** working days of the original plan issue date.
- The customer must contact Endeavour Energy if any of the plans provided have blank pages, as some underground asset information may be incomplete.
- Endeavour Energy underground earth grids may exist and their location **may not** be shown on plans. Persons excavating are expected to exercise all due care, especially in the vicinity of padmount substations, pole mounted substations, pole mounted switches, transmission poles and towers.
- Endeavour Energy plans **do not** show any underground customer service mains or information relating to service mains within private property.
- Asbestos or asbestos-containing material may be present on or near Endeavour Energy's underground assets.
- Organo-Chloride Pesticides (OCP) may be present in some sub-transmission trenches.
- All plans must be printed and made available at the worksite where excavation is to be undertaken. Plans must be reviewed and understood by the crew on site prior to commencing excavation.

INFORMATION PROVIDED BY ENDEAVOUR ENERGY

- Any plans provided pursuant to this service are intended to show the approximate location of underground assets relative to road boundaries, property fences and other structures at the time of installation.
- Depth of underground assets may vary significantly from information provided on plans as a result of changes to road, footpath or surface levels subsequent to installation.
- Such plans have been prepared solely for use by Endeavour Energy staff for design, construction and maintenance purposes.
- All enquiry details and results are kept in a register.

DISCLAIMER

Whilst Endeavour Energy has taken all reasonable steps to ensure that the information contained in the plans is as accurate as possible it will accept no liability for inaccuracies in the information shown on such plans.

Referral Conditions

The following are conditions on which **nbn** provides you with the Indicative Plans. By receiving, accepting or relying upon the plans (including the Indicative Plans), you are agreeing to these conditions. These conditions are in addition to (and not in replacement of) any duties and obligations you have under applicable law.

1. **nbn** does not accept any responsibility for any inaccuracies of its plans including the Indicative Plans. You are expected to make your own inquiries and perform your own investigations (including engaging appropriately qualified plant locators at your cost to locate **nbn** telecommunications facilities during any activities you carry out on site).
2. You should not assume that **nbn** cables and assets follow straight lines or are installed at uniformed depths along their lengths, even if they are indicated on plans provided to you. Careful onsite investigations are essential to locate the exact position of cables.
3. In carrying out any works in the vicinity of **nbn** facilities, you must maintain the following minimum clearances:
    - 300mm when laying assets inline, horizontally or vertically
    - 500mm when operating vibrating equipment, for example: jackhammers or vibrating plates;and
    - 1000mm when operating mechanical excavators.
    - Adherence to clearances as directed by other asset owner's instructions
4. You are aware that there are inherent risks and dangers associated with carrying out work in the vicinity of underground facilities (such as **nbn** fibre optic,copper and coaxial cables, to **nbn** assets).Damage to underground electric cables may result in:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Injury from electric shock or severe burns, with the possibility of death.
- Interruption of the electricity supply to wide areas of the city.
- Damage to your excavating plant.
- Responsibility for the cost of repairs.

5. You must take all reasonable precautions to avoid damaging **nbn** facilities. These precautions may include ,but not limited to, the following:
    - All excavation sites should be examined for underground cables by careful hand excavation. Cable cover slabs if present must not be disturbed. Hand excavation needs to be undertaken with extreme care to minimise the likelihood of damage to the cable, for example, the blades of hand equipment should be aligned parallel to the line of the cable rather than digging across the cable.
    - If any undisclosed underground cables are located, notify **nbn** immediately.
    - All personnel must be properly briefed, particularly those associated with the use of earth-moving equipment, trenching, boring and pneumatic equipment.
    - The safety of the public and other workers must be ensured.
    - All excavations must be undertaken in accordance with all relevant legislation and regulations.
6. You will be responsible for all damage to **nbn** facilities that are connected whether directly, or indirectly with work you carry out (or work that is carried out for you or on your behalf) at the Location. This will include,without limitation, all losses expenses incurred by **nbn** as a result of any such damage.
7. You must immediately report any damage to **nbn™** network that you are/become aware of. Notification may be by telephone - 1800 626 762.
8. Except to the extent that liability may not be capable of lawful exclusion, **nbn** and its servants and agents and the related bodies corporate of **nbn** and their servants and agents shall be under no liability whatsoever to any person for any loss or damage (including indirect or consequential loss or damage) however caused (including, without limitation, breach of contract negligence and/or breach of statute) which may be suffered or incurred from or in connection with this information sheet or any Plans attached hereto. Except as expressly provided to the contrary in this information sheet or the attached Indicative Plans, all terms, conditions, warranties, undertakings or representations (whether expressed or implied) are excluded to the fullest extent permitted by law.

All works undertaken shall be in accordance with all relevant legislations, acts and regulations applicable to the particular state or territory of the Location. The following table lists all relevant documents that shall be considered and adhered to.

State/Territory	Documents
National	Work Health and Safety Act 2011
	Work Health and Safety Regulations 2011

List of NSW Contaminated Sites Notified to EPA as of 21 June 2016

Background

A strategy to systematically assess, prioritise and respond to notifications under Section 60 of the *Contaminated Land Management Act 1997* (CLM Act) has been developed by the EPA. This strategy acknowledges the EPA's obligations to make information available to the public under *Government Information (Public Access) Act 2009*.

When a site is notified to the EPA, it may be accompanied by detailed site reports where the owner has been proactive in addressing the contamination and its source. However, often there is minimal information on the nature or extent of the contamination.

For some notifications, the information indicates the contamination is securely immobilised within the site, such as under a building or carpark, and is not currently causing any offsite consequences to the community or environment. Such sites would still need to be cleaned up, but this could be done in conjunction with any subsequent building or redevelopment of the land. These sites may not require intervention under the CLM Act, but could be dealt with through the planning and development consent process.

Where indications are that the nominated site is causing actual harm to the environment or an unacceptable offsite impact (i.e. it is a "significantly contaminated site"), the EPA would apply the regulatory provisions of the CLM Act to have the responsible polluter and/or landowner investigate and remediate the site.

As such, the sites notified to the EPA and presented in the following table are at various stages of the assessment and/or remediation process. Understanding the nature of the underlying contamination, its implications and implementing a remediation program where required, can take a considerable period of time. The tables provide an indication, in relation to each nominated site, as to the management status of that particular site. Further detailed information may be available from the EPA or the responsible landowner.

The following questions and answers may assist those interested in this issue:

Frequently asked questions

What is the difference between the "List of NSW Contaminated Sites Notified to the EPA" and the "Contaminated Land: Record of Notices"?

A site will be on the Contaminated Land: Record of Notices only if the EPA has issued a regulatory notice in relation to the site under the *Contaminated Land Management Act 1997*.

The sites appearing on this "List of NSW contaminated sites notified to the EPA" indicate that the notifiers consider that the sites are contaminated and warrant reporting to the EPA. However, the contamination may or may not be significant enough to warrant regulation by the EPA. The EPA needs to review and, if necessary, obtain more information before it can make a determination as to whether the site warrants regulation.

Why my site appears on the list?

Your site appears on the list because of one or more of the following reasons:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- The site owner and/or the person partly or fully responsible for causing the contamination notified to the EPA about the contamination under Section 60 of the *Contaminated Land Management Act 1997*. In other words, the site owner or the "polluter" believes the site is contaminated.
- The EPA has been notified via other means and is satisfied that the site is or was contaminated.

Does the list contain all contaminated sites in NSW?

No. The list only contains contaminated sites that the EPA is aware of, with regard to its regulatory role under the CLM Act. An absence of a site from the list does not necessarily imply the site is not contaminated.

The EPA relies upon responsible parties to notify contaminated sites.

How are these notified contaminated sites managed by the EPA?

There are different ways that the EPA manages these notified contaminated sites. First, an initial assessment is carried out by the EPA. At the completion of the initial assessment, the EPA may take one or more than one of the following management approaches:

- The contamination warrants the EPA's direct regulatory intervention either under the *Contaminated Land Management Act 1997* or the *Protection of the Environment Operations Act 1997* (POEO Act), or both. Information about current or past regulatory action on this site can be found on EPA website.
- The contamination with respect to the current use or approved use of the site, as defined under the *Contaminated Land Management Act 1997,* is not significant enough that it warrants EPA regulation.
- The contamination does not require EPA regulation and can be managed by a planning approval process.
- The contamination is related to an operational Underground Petroleum Storage System, such as a service station or fuel depot. The contamination may be managed under the POEO Act and the Protection of the Environment Operation (Underground Petroleum Storage Systems) Regulation 2008.
- The contamination is being managed under a specifically tailored program operated by another agency (for example the Department of Industry and Investment's *Derelict Mines Program*).

I am the owner of a site that appears on the list. What should I do?

First of all, you should ensure the current use of the site is compatible with the site contamination. Secondly, if the site is the subject of EPA regulation, make sure you comply with the regulatory requirements, and you have considered your obligations to notify other parties who may be affected.

If you have any concerns, contact us and we may be able to offer you general advice, or direct you to accredited professionals who can assist with specific issues.

I am a prospective buyer of a site that appears on the list. What should I do?

You should seek advice from the vendor to put the contamination issue into perspective. You may need to seek independent expert advice.

The information provided in the list is meant to be indicative only, and a starting point for your own assessment. Site contamination as a legacy of past site uses is not uncommon,

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

particularly in an urbanised environment. If the contamination on a site is properly remediated or managed, it may not materially impact upon the intended future use of the site. However, each site needs to be considered in context.

List of NSW Contaminated Sites Notified to the EPA

Disclaimer

The EPA has taken all reasonable care to ensure that the information in the list of contaminated sites notified to the EPA (the list) is complete and correct. The EPA does not, however, warrant or represent that the list is free from errors or omissions or that it is exhaustive.

The EPA may, without notice, change any or all of the information in the list at any time.

You should obtain independent advice before you make any decision based on the information in the list.

The list is made available on the understanding that the EPA, its servants and agents, to the extent permitted by law, accept no responsibility for any damage, cost, loss or expense incurred by you as a result of:

1. any information in the list; or
2. any error, omission or misrepresentation in the list; or
3. any malfunction or failure to function of the list;
4. without limiting (2) or (3) above, any delay, failure or error in recording, displaying or updating information.

Site Status	Explanation
Under assessment	The contamination is being assessed by the EPA to determine whether regulation is required. The EPA may require further information to complete the assessment. For example, the completion of management actions regulated under the planning process or *Protection of the Environment Operations Act 1997*. Alternatively, the EPA may require information via a notice issued under s77 of the *Contaminated Land Management Act 1997* or issue a Preliminary Investigation Order.
Regulation under CLM Act not required	The EPA has completed an assessment of the contamination and decided that regulation under the *Contaminated Land Management Act 1997* is not required.
Regulation being finalised	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the *Contaminated Land Management Act 1997*. A regulatory approach is being finalised.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Contamination currently regulated under CLM Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the *Contaminated Land Management Act 1997* (CLM Act). Management of the contamination is regulated by the EPA under the CLM Act. Regulatory notices are available on the EPA's Contaminated Land Public Record.
Contamination currently regulated under POEO Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. Management of the contamination is regulated under the *Protection of the Environment Operations Act 1997* (POEO Act). The EPA's regulatory actions under the POEO Act are available on the POEO public register.
Contamination being managed via the planning process (EP&A Act)	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. The contamination of this site is managed by the consent authority under the *Environmental Planning and Assessment Act 1979* (EP&A Act) planning approval process, with EPA involvement as necessary to ensure significant contamination is adequately addressed. The consent authority is typically a local council or the Department of Planning and Environment.
Contamination formerly regulated under the CLM Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation under the *Contaminated Land Management Act 1997* (CLM Act). The contamination was addressed under the CLM Act.
Contamination formerly regulated under the POEO Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed under the *Protection of the Environment Operations Act 1997* (POEO Act).
Contamination was addressed via the planning process (EP&A Act)	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed by the appropriate consent authority via the planning process under the *Environmental Planning and Assessment Act 1979* (EP&A Act).
Ongoing maintenance required to manage residual contamination (CLM Act)	The EPA has determined that ongoing maintenance, under the *Contaminated Land Management Act 1997* (CLM Act), is required to manage the residual contamination. Regulatory notices under the CLM Act are available on the EPA's Contaminated Land Public Record.

Where is Unexploded Ordnance (UXO)?

UXO can be found in most states within Australia. The following links will take you to an interactive map that will allow you to search the locations of known areas of concern.

SELECT STATE > FIND A MAP > SELECT PARCEL

No Results Found

No parcel found for Lot **1** DP/SP **252457**. Only parcels within 500m of a known UXO area are available. Defence is actively engaged in identifying areas where UXO are likely to be present. Members of the public can assist in this process. If you have any information that may be of assistance please contact UXO@defence.gov.au via email.

PASSIVE SOIL GAS SAMPLE LOG

PROJECT INFORMATION	
PROJECT NAME / NUMBER	1601069
INITIALS:	AM
DATE:	19/7/16

SAMPLE INFORMATION	
SAMPLE ID:	SSU1
SAMPLE TYPE:	☐ Sub-slab ☐ Soil Vapour
SAMPLE DEPTH:	0.28
BOREHOLE SEALANT:	Glad-wrap + modelling clay

SAMPLE LOCATION OBSERVATIONS (OUTSIDE CONTAMINANT SOURCES, BOREHOLE ODOURS, ETC)
Next to existing drycleaner. Also where past drycleaner was.

SOIL DESCRIPTION
Mixed in drill cores.
SOIL MOISTURE: ☐ Wet ☐ Moist ☐ Dry

WEATHER	
AVERAGE TEMPERATURE: 20°C	PRECIPITATION: 70% humidity

TIMING		
MINIMUM CALCULATED DEPLOYMENT TIME:		
SAMPLE START TIME:	10:15	SAMPLE START DATE: 19/7/16
SAMPLE RETRIEVAL TIME:	8:45	SAMPLE RETRIEVAL DATE: 21/7/16
TOTAL DEPLOYMENT TIME:	46:30	

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PASSIVE SOIL GAS SAMPLE LOG

PROJECT INFORMATION	
PROJECT NAME / NUMBER	160169
INITIALS:	AM
DATE:	19/7/16

SAMPLE INFORMATION	
SAMPLE ID:	SSV2
SAMPLE TYPE:	☐ Sub-slab ☐ Soil Vapour
SAMPLE DEPTH:	0.36
BOREHOLE SEALANT:	Glad wrap & modelling clay

SAMPLE LOCATION OBSERVATIONS (OUTSIDE CONTAMINANT SOURCES, BOREHOLE ODOURS, ETC)
NW corner of shop under clothing rack

SOIL DESCRIPTION
Mixed in drill rods
SOIL MOISTURE: ☐ Wet ☐ Moist ☐ Dry

WEATHER	
AVERAGE TEMPERATURE: 20°C	PRECIPITATION: 70% humidity

TIMING		
MINIMUM CALCULATED DEPLOYMENT TIME:		
SAMPLE START TIME:	10:36	SAMPLE START DATE: 19/7/16
SAMPLE RETRIEVAL TIME:	8:50	SAMPLE RETRIEVAL DATE: 21/7/16
TOTAL DEPLOYMENT TIME:	46:14	

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PASSIVE SOIL GAS SAMPLE LOG

PROJECT INFORMATION	
PROJECT NAME / NUMBER	1601069
INITIALS:	AM
DATE:	19/7/16

SAMPLE INFORMATION	
SAMPLE ID:	Blank
SAMPLE TYPE:	☐ Sub-slab ☐ Soil Vapour
SAMPLE DEPTH:	Backgraund air
BOREHOLE SEALANT:	N/A

SAMPLE LOCATION OBSERVATIONS (OUTSIDE CONTAMINANT SOURCES, BOREHOLE ODOURS, ETC)
Next to the dry cleaing machine.

SOIL DESCRIPTION
N/A
SOIL MOISTURE: ☐ Wet ☐ Moist ☐ Dry

WEATHER	
AVERAGE TEMPERATURE: 20°C	PRECIPITATION: 70% humidity

TIMING		
MINIMUM CALCULATED DEPLOYMENT TIME:		
SAMPLE START TIME:	10:26	SAMPLE START DATE: 19/7/16
SAMPLE RETRIEVAL TIME:	10:30	SAMPLE RETRIEVAL DATE: 19/7/16
TOTAL DEPLOYMENT TIME:	0.04

SGS has received your samples from the project listed below. If you have any enquiries please contact us quoting our reference number.

Project/Reference No.:	1601069
Our Reference Number:	**M161503**
Date Received:	25-Jul-2016
Estimated date of report:	03-Aug-2016

Additional Information:

Samples received after 4 pm are considered as received on the next working day for turnaround purposes.
Samples with a 24hr or 48hr TAT are considered as received on the next working day if received after 2:30pm.
Surcharges for urgent turnaround requests may apply.
All analytical work is conducted at our Melbourne office.
Sample Storage - All aqueous samples are stored for **two weeks** after reporting.
- All soils and other samples are stored for **one month** after reporting.
Please direct any technical or turnaround queries to Adam Atkinson at our Melbourne office.

CERTIFICATE OF ANALYSIS

SAMPLES:	Three samples were received for analysis
DATE RECEIVED:	**25-Jul-2016**
DATE COMMENCED:	**25-Jul-2016**
METHODS:	See Attached Results
RESULTS:	Please refer to attached pages for results.

Note: Results are based on samples as received at SGS laboratories
Results in airbourne concentrations are calculated using data provided by the client

REPORTED BY:

Adam Atkinson
Business Manager

NATA Accredited Laboratory Number: 14429

Accredited for compliance
with ISO/IEC 17025.

ANALYTICAL RESULTS

QUALIFIERS / NOTES FOR REPORTED RESULTS

PQL	Practical Quantitation Limit
nd	Not Detected – The analyte was not detected above the reported PQL.
is	Insufficient Sample to perform this analysis.
T	Tentative identification based on computer library search of mass spectra.
NC	Not calculated and/or Results below PQL
NV	No Vacuum, Canister received above standard atmospheric pressure
nr	Not Requested for analysis.
R	Rejected Result – results for this analysis failed QC checks.
SQ	Semi-Quantitative result – quantitation based on a generic response factor for this class of analyte.
IM	Inappropriate method of analysis for this compound
U	Unable to provide Quality Control data – high levels of compounds in sample interfered with analysis of QC results.
UF	Unable to provide Quality Control data- Surrogates failed QC checks due to sample matrix effects
L	Analyte detected at a level above the linear response of calibration curve.
E	Estimated result. NATA accreditation does not cover estimated results.
C1	These compounds co-elute.
--	Parameter Not Determined
CT	Elevated concentration. Results reported from carbon tube analysis
**	Sample shows non-petroleum hydrocarbon profile

Executive Summary

JBS&G Australia Pty Ltd (JBS&G) was engaged by Penrith City Council (Council, the client) to provide environmental consulting services associated with the Combined Phase 1 and 2 Environmental Site Assessment (ESA) in conjunction with the delivery of a Geotechnical Investigation of ten lots located at 114 to 146 Henry Street, 42 to 50 Station Street and Allen Place carpark, Penrith, NSW (the Site). This ESA Report details the findings of the Phase 2 ESA. The legal identification of the lots and part lots which comprise the Site are provided in **Table 2.1**, which comprise a total area of approximately 1.87 hectares (ha) as shown in **Figure 1** and **2**.

It is understood that Council intends on redeveloping the Site for mixed use including recreational space and 4 to 6 storey residential apartments with retail and commercial uses. Council requires an ESA and Geotechnical Investigation to enable the potential contamination and geotechnical risks to be assessed prior to land purchase given the proposed redevelopment.

Penrith engaged Geo-Logix Pty Ltd (Geo-Logix) to conduct a preliminary ESA, Geo-Logix (2016[1]) at the property located at 134-138 Henry Street, Penrith, NSW (the preliminary assessment area, Lot 1 DP164798, **Figure 2**). The preliminary assessment was undertaken to assess the potential for contamination to exist at the site given the presence of an operational dry cleaning business within the preliminary assessment area. Geo-Logix carried out passive soil vapour assessments at two locations within the dry-cleaning shop. Chlorinated hydrocarbons were detected in soil vapour samples at concentrations in excess of the commercial land use criteria adopted for the assessment.

Sample results from the soil vapour sampling and analyses undertake as part of this investigation have indicated that there currently exists a significant chlorinated hydrocarbon impact within the vicinity of the dry cleaner. The volatile gas impact extends north of the dry cleaner, along the inferred groundwater flow direction, with exceedances of the soil vapour criteria for PCE and TCE identified from gas samples taken at probe locations SV04, SV05 and SV10 (**Figure 3C**). It is noted that the most significant concentrations were detected at location SV05, approximately in line with the inferred groundwater flow direction.

The presence of chlorinated hydrocarbons in soil vapour represent a potential risk to current and future site users and will require remediation/management for the proposed land uses. The concentration of PCE within soil vapour at location SV05 and the concentration of both PCE and TCE exceeded the adopted HIL-C criteria; these exceedances represent a risk to future onsite receptors.

Concentrations of COPC in all other samples analysed were reported to be at concentrations which did not indicate the presence of statistically significant exceedances of the adopted site assessment criteria.

Groundwater and soil concentrations within the vicinity of the dry cleaner have also indicated the presence of chlorinated hydrocarbons, primarily PCE and TCE, albeit at concentrations which were below the adopted site assessment criteria. This has indicated that the impact has migrated laterally and vertically through soil and groundwater at the Site. It is noted that no well downstream of the impact was able to be installed due to the presence of building awnings/eaves along the northern boundary of the Site. It is considered possible that additional groundwater impact may be present at the Site that has yet to be identified.

Given the Site history, the presence of buried anthropogenic materials in the form of building and demolition waste and the identification of trace levels of asbestos within soil at location JB11, it is considered likely that ACM is present at other locations at the Site. Boreholes are limited in their

[1] *'Preliminary Environmental Site Assessment Report, 134 – 138 Henry Street Penrith NSW 2750'*, Geo-Logix Pty Ltd, Reference: 1601069Rpt01FinalV01_12Aug16, 12 August 2016, Geo-Logix (2016)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

utility for the identification of buried asbestos and ACM, therefore redevelopment of the Site may uncover additional, undocumented asbestos which could potentially represent a risk to human health.

In accordance with the limitations in **Section 11**, the following conclusions are provided:

- Soil vapour concentrations within the vicinity of the dry cleaner represent a potential risk to current and future site users which will require management prior to utilisation of the Site for the proposed land uses;
- Offsite migration of chlorinated hydrocarbons is potentially occurring, north of the dry cleaner along the inferred groundwater flow direction;
- Lead impacted fill material in the vicinity of JHA02 is required to be managed prior to the utilisation of the site for the proposed land uses;
- Asbestos and ACM may be present within surficial fill materials at the Site which has not been documented as part of this DSI. Boreholes are limited in their utility for the identification of buried asbestos and ACM. During the redevelopment stage of the works, additional asbestos may be identified which could potentially represent a risk to human health and will require management/remediation during redevelopment;
- Contaminants in soils and groundwater were generally not present at concentrations representing statistically significant exceedances of the Site assessment criteria, and therefore with the exception of the aforementioned, do not represent a risk to the current or futures site users;
- No background soil concentrations or aesthetic issues were identified in this assessment;
- The Site is currently unsuitable for the proposed land uses. Subject to the implementation of an RAP which manages the identified impacts, it is considered that the Site can be made suitable for the proposed land uses; and
- The reported concentrations of chlorinated hydrocarbons in groundwater/soil vapour exceed the relevant investigation levels presented in Schedule B1 of the *National Environment Protection (Assessment of Site Contamination) Measure 1999* (NEPC 2013). As a result, there is a potential requirement for the site to be notified to the NSW EPA in accordance with the *Guidelines on the Duty to Report Contamination under the Contaminated Land Management Act 1997* (NSW EPA 2015).

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

1. Introduction

1.1 Introduction

JBS&G Australia Pty Ltd (JBS&G) was engaged by Penrith City Council (Council, the client) to provide environmental consulting services associated with the Combined Phase 1 and 2 Environmental Site Assessment (ESA) in conjunction with the delivery of a Geotechnical Investigation of ten lots located at 114 to 146 Henry Street, 42 to 50 Station Street and Allen Place carpark, Penrith, NSW (the Site). This ESA Report details the findings of the Phase 2 ESA. The legal identification of the lots and part lots which comprise the Site are provided in **Table 2.1**, which comprise a total area of approximately 1.87 hectares (ha) as shown in **Figure 1** and **2**.

The Site is located within a suburban setting comprising a sealed, asphaltic pavement carpark with several pedestrian and vehicular access roads, bordered by a combination of wooden guard rails, planter boxes and vegetation. The majority of the Site was an active carpark at the time of the investigation.

It is understood that Council intends on redeveloping the Site for mixed use including recreational space and 4 to 6 storey residential apartments with retail and commercial uses. Council requires an ESA and Geotechnical Investigation to enable the potential contamination and geotechnical risks to be assessed prior to land purchase given the proposed redevelopment.

This report has been developed in accordance with guidelines made or approved by the NSW Environment Protection Authority (EPA) and relevant Australian Standards. The Geotechnical component of the assessment was completed by Pells Sullivan Meynink (PSM) and was carried out concurrently with the environmental investigation. The PSM report is included as **Appendix A**.

1.2 Objectives

The objectives of the investigation were to assess the potential for contamination based on current and historical Site activities and to draw conclusions regarding the potential contamination status of the Site for the proposed land uses, or make recommendations to enable such conclusions to be made.

1.3 Scope of Works

The agreed scope of works completed for this assessment comprised:

- A review of available Site history and background information to identify potential areas of environmental concern (AECs) and associated contaminants of potential concern (COPC), including:
    - Section 149(2&5) certificates obtained from council from three representative lots;
    - Records of stored Dangerous Goods held by WorkCover;
    - Historical aerial photographs obtained from the Department of Lands;
    - Publicly available heritage records held by the Department of Planning and Environment and Council, where readily available;
    - Records of environmental incidents, former environmental licences, or contaminated land notices or notifications, as held by the EPA; and
    - Licensed groundwater bores present within a 1.5 km radius of the Site available on the online NSW Natural Resources Atlas.
- Review of the environmental setting including a review of topography, geology, hydrogeology and meteorology of the Site and surrounding areas;
- A detailed Site inspection to identify potential AECs and confirm desktop findings;

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Development and documentation of a conceptual site model (CSM) based on the available information;
- Development and documentation of the data quality objectives (DQOs) for the ESA in general accordance with relevant EPA guidelines;
- Implementation of a Detailed Site Investigation (DSI) program including advancement of systematic and targeted soil, soil vapour and groundwater sampling locations;
- Analysis of selected samples for a range of COPCs as identified during the Preliminary Site Investigation (PSI) component of the investigations;
- Comparison of collected data against regulator published / endorsed investigation criteria to facilitate an assessment of land use suitability;
- Comparison of collected data against guidelines of for classifying waste (EPA 2014[2]); and
- Preparation of an ESA report in general accordance with relevant EPA guidelines.

[2] *'Waste Classification Guidelines – Part 1: Classifying Waste'*, Environmental Protection Authority, November 2014 (EPA 2014)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

2. Site Condition and Surrounding Environment

2.1 Site Identification

The Site location is shown on **Figure 1**. The extent of the Site and associated cadastral boundaries are shown on **Figure 2**. The Site details are summarised in **Table 2.1** and described in detail in the following sections.

Table 2.1 Summary Site Details

Lots / DPs	Lot 1 in DP526304, DP163176 (No Lot #), Lot 2 in DP556075, Lot 10 in DP553665, Lot 11 in DP 553665, Lot 1 in DP164798, Lot 1 in DP545587, Lot 1 in DP254763, Lot 3 in DP1200790, Lot 1 in DP113118 and Allen Place Carpark
Address	114-146 Henry Street, 42-50 Station Street and Allen Place Car Park, Penrith NSW
Local Government Authority	Penrith City Council
Approximate MGA Coordinates (MGA 56)	As shown on **Figure 2**
Site Zoning	Commercial Core (B3) and Public Recreation (RE1) (Penrith 2010[3])
Current Use	Commercial and car parking
Previous Use	Commercial and car parking
Proposed Use	Mixed Use – Recreation, high density residential and commercial
Site Area	Approximately 1.87 ha

2.2 Site Description

A detailed site inspection was completed by Rohan Hammond on 31 October 2016 and again on 26 May 2017, relevant details are documented below. A photographic log is presented in **Appendix B**.

The Site comprised an approximately rectangular, large commercial car park in the centre of the Allen Place loop road and ten commercial premises on the southern side of Henry Street in Penrith. The borders of the Site were not secured and open to the public (pedestrians and vehicles) with the exception.

The Site topography did not appear to have been significantly altered from their natural alignment, comprising a slightly raised eastern section which sloped gradually downward toward the west.

The Site comprised a mixture of commercial uses at the time of the site investigation: an operational car park, dry cleaner, retail shops and cafes. High pedestrian and vehicular traffic was observed during working hours. At the beginning of the investigation (31 October 2016), a vehicular overbridge existed which was observed to link traffic from the central portion of the Allen Place Car Park to rooftop car parking on the adjacent side of Station Street, west of the Site. Throughout the course of the investigation, prior to any soil environmental sampling activities, the overbridge was demolished and ground surface reinstated by asphaltic pavements.

Approximately 95 % of the Site comprised sealed ground in the form of asphaltic pavement, concrete pathways, and building footprints with onsite drainage channels directing surface water toward the municipal stormwater system. The balance of the Site comprised unsealed grounds in the form of garden beds and unpaved areas.

Buildings at the Site have generally not been maintained to a high level of repair although no significant degradation of building materials was observed. A detailed inspection/hazardous building materials survey of the existing site structures was not undertaken as part of this investigation.

No surface water was present at the Site at the time of the investigation. No evidence of waste storage or storage tanks was observed at the Site. North of the dry cleaner, olfactory indicators of volatile chemical usage were noted. No visual indicators of gross or widespread contamination were observed. Four transformers were observed: one in the southwest and east corners of the Site and

[3] *'Penrith Local Environmental Plan 2010'*, Penrith City Council, Published 11 March 2016, Penrith 2010

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

two along the northern boundary of the Allen Place Car Park, which were on raised concrete platforms. No hydrocarbon staining was observed to be associated with the transformers..

2.3 Surrounding Land Use

The current land uses of adjacent properties or properties across adjacent roads are summarised below.

- North – The Site is bound to the north by Henry Street and then numerous commercial premises including Fit n Fast Penrith, Queens of Hearts Community Foundation and Nepean College. Further north was an open carpark and commercial premises on Belmore Street, including Bob Jane T-Marts and Veterinary Hospital;
- East – To the east of the Site is Woodriff Street North, with commercial premises and Edwards Place carpark. Further east were a Pathology Centre and testing laboratory;
- South – The Site is bound to the south by Allen Place, following which are multiple commercial properties including cafes, a medical centre and pharmacy. Further south commercial premises are present beyond High Street; and
- West – The Site is bound to the west by Station Street, then medium to high density commercial premises. Further to the west was Peach Tree Creek and eventually the Nepean River.

2.4 Topography

Review of topographic information obtained from the Spatial Information Exchange Viewer (LPI 2015[4]) regional topographic map indicated that site has an elevation of approximately 30 m Australian Height Datum (AHD) sloping generally downwards to the west. Regional topography sloped down to the west towards the Nepean River.

Site inspection confirmed that the topography on site was not significantly altered from the natural alignment and sloped slightly downward toward Station Street, west of the Site. Localised variations in ground level were associated with cut to fill works for the construction of planted garden beds.

2.5 Geology and Soils

Reference to the 1:100 000 Geological Series Sheet for Penrith (DMR 1991[5]) indicates that the Site lays within an area identified to be underlain by Bringelly Shale Ashfield Shale of the Wianamatta Group. The geology originated in the Middle Triassic period of the Mesozoic Era, and is largely characterised by dark-grey to black claystone-siltstone and fine sandstone-siltstone laminate.

Reference to the 1:100 000 Soil Landscape Series Sheet for Penrith (DMR 1990[6]) indicates that the Site is within the Richmond Soil Landscape group. This group of landscape is characterised by quaternary terraces of the Nepean and Georges Rivers. Relatively flat (slopes <1 %) and level. Splays, levees provide local relief of <3 m. Formerly a low open woodland. Richmond soils are poorly structured orange to red clay loams, clays and sands. Texture may increase with depth. Ironstone nodules may be present. Plastic clays in drainage lines, red earths and red podzolic soils occur on terrace surfaces with earthy sands on terrace edges. Limitations of the Richmond group include high erosion hazard on terrace edges and minor localised flooding.

The lithology observed during groundwater well installation (**Appendix C**) reported a moderately deep alluvial soil setting (Clay to sandy clay present from a depth of 0.4 m to 10.5 m below ground surface (bgs)), followed by Nepean River gravels (6.1 m to 13.0 m bgs). The river gravels were, in turn, underlain by grey and black residual shale bedrock.

---

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

2.6 Hydrology

Rainfall is considered likely to migrate from site primarily through surface water runoff into the municipal stormwater system. Minor infiltration into the underlying porous soils and surface is also expected in areas of unsealed ground.

As discussed in **Section 2.2**, the Site is largely covered by concrete, asphaltic pavements and building footprints. As such, surface water generated during periods of rainfall is anticipated to primarily enter the municipal stormwater system; via discharge into onsite stormwater catchment infrastructure or alternatively discharge into stormwater pits within the surrounding roadways.

The nearest water body to the Site is Peach Tree Creek, approximately 1.1 km to the west of the Site boundary. Peach Tree Creek ultimately contributes to the Nepean River. Municipal stormwater discharges to the Nepean River.

2.7 Hydrogeology

Registered groundwater bore information was obtained from the NSW Department of Primary Industries groundwater mapping tools (NSW DPI 2016[7]) (**Appendix C**). A review of the registered bore information indicated that there were thirteen bores within a 1.5 km radius of the Site. The registered bore searches are summarised in **Table 2.2**.

Table 2.2 Registered Groundwater Bore Search

Bore ID	Use	Property	Standing Water Level (m bgs)	Well Depth (m)	Encountered Geology Comments
GW026231	Recreation	N/A	-	8.53	Shallow silt and loam clay (4.26 m bgs) to river gravels (4.26-8.53 m bgs)
GW029710	Domestic	N/A	6.00	7.92	Shallow loam (0-2.74 m bgs) to river gravels (2.74-7.92 m bgs)
GW101178	Test Bore	N/A	8.00	11.20	Shallow sandy clay and grey sands (0-6.00 m bgs) to coarse river gravel and cobbles (6.00-10.50 m bgs) overlying residual shale.
GW103048	Recreation	Penrith Showground	6.00	8.00	-
GW108041	Monitoring	Coreen Ave Penrith	6.70	7.50	Shallow clay (0.20-3.30 m bgs) overlying river gravels (3.30-7.50 m bgs)
GW108042	Monitoring	Coreen Ave Penrith	6.40	8.00	Shallow clay (0.20-2.50 m bgs) overlying river gravels (2.50-7.50 m bgs)
GW108043	Monitoring	Coreen Ave Penrith	6.80	9.00	Shallow clayey sands (0.20-5.40 m bgs) overlying river ravels (5.40-9.00 m bgs)
GW108044	Monitoring	Coreen Ave Penrith	6.60	9.50	Shallow fill and silty clayey sands (0.00-6.40 m bgs) overlying river gravels (6.40-9.50 m bgs)
GW108484	Recreation	Station St Penrith	-	11.00	Shallow clay (0-6.00 m bgs) to sand (6.00-8.50 mbgs) overlying river gravels (8.50-11.00 m bgs)
GW111987	Monitoring	High St Penrith	-	9.00	Shallow clay (0-3.00 m bgs) overlying river gravels (3.00-9.00 m bgs)
GW111988	Monitoring	High St Penrith	7.50	9.00	Shallow clay (0-3.00 m bgs) overlying river gravels (3.00-9.00 m bgs)
GW111989	Monitoring	High St Penrith	7.50	9.00	Shallow clay (0-3.00 m bgs) overlying river gravels (3.00-9.00 m bgs)

Based on the reported geology, topography and depth to groundwater, groundwater migration is expected to occur in a north-westerly direction, towards Peach Tree Creek approximately 1.2 km away. Groundwater has been reported in the surrounding properties within the river gravels layer.

[7] NSW Department of Primary Industries, 2015. Groundwater Monitoring Overview Map. Http://allwaterdata.water.nsw.gov.au/water.stm. Accessed 8 November 2016

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

A relatively high water table (between 5 and 10 m bgs) is anticipated given the reported levels in the surrounding groundwater wells and the lack of significant variation in topographic levels.

Registered groundwater bores located within a 1.5 km radius of the Site are used for monitoring, recreational and testing purposes. Given the relatively dense urban use of the Site and surrounding properties, in addition to the identified licensed bores, there is considered to be a moderate probability of additional undocumented monitoring/irrigation bores in the vicinity of the Site. No reported utilisation of groundwater as a drinking water source has been reported.

2.8 Acid Sulfate Soils

Review of the Acid Sulfate Soil Risk Map from Australian Soil Resource Information System (ASRIS)[8] indicates that the Site is located within an area of 'low probability of occurrence of Acid Sulfate Soils'. Acid sulfate soils (ASS) are unlikely to be expected to occur in areas having this classification. This is consistent with the topographic and geological setting of the Site.

Three representative Section 149(2&5) council certificates were obtained for the Site as discussed in **Section 3.2**. The land was not identified to have redevelopment restrictions based on the likelihood of the presence of Acid Sulfate Soils.

No indicators of PASS or ASS were observed during intrusive soil investigation. On this basis, there are no further requirements for the assessment or management of ASS as part of this investigation.

2.9 Meteorology

A review of average climatic data for the nearest Bureau of Meteorology monitoring location (Penrith Lakes[9]) indicates the Site is located within the following meteorological setting:

- Average minimum temperatures vary from 5.5 ^{o}C in July to 18.5 ^{o}C in January;
- Average maximum temperatures vary from 17.7 ^{o}C in July to 30.7 ^{o}C in January;
- The average annual rainfall is approximately 728.1 mm with rainfall greater than 1 mm occurring on an average of 71.7 days per year; and
- Monthly rainfall varies from 30.6 mm in September to 121.4 mm in June with the wettest periods occurring on average in January to June.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3. Site History

3.1 Previous Environmental Investigations

Penrith engaged Geo-Logix Pty Ltd (Geo-Logix) to conduct a preliminary ESA, Geo-Logix (2016[10]) at the property located at 134-138 Henry Street, Penrith, NSW (the preliminary assessment area, Lot 1 DP164798, **Figure 2**). The preliminary assessment was undertaken to assess the potential for contamination to exist at the site given the presence of an operational dry cleaning business within the preliminary assessment area.

The preliminary ESA identified that the site appeared to be vacant until the 1950s where it was subsequently utilised for material storage. The building layout as observed in the current investigation was constructed during the 1960s and the dry cleaner has operated since 1977. Additionally, aerial photographs provided as part of the report indicated that a service station operated from the 1950s to the 1970s (118 Henry Street, Lot 1 DP113118, **Figure 2**) which may constitute an off-site contamination source for the preliminary assessment area. It is noted that the historical service station area forms part of the current investigation area.

Geo-Logix carried out passive soil vapour assessments at two locations within the dry-cleaning shop. Chlorinated hydrocarbons (tetrachloroethene (PCE), trichloroethene (TCE) and cis-1.2 dichloroethene (DCE)) were detected in soil vapour samples at concentrations in excess of the commercial land use criteria adopted for the assessment. Additionally, benzene, toluene, ethylbenzene and xylene (BTEX) compounds were detected within the soil vapour at concentrations above the laboratory limit of reporting (LOR) but below the commercial land use criteria. Geo-Logix did not identify onsite migration of contaminants from the former service station as a likely source for these BTEX compounds.

The preliminary ESA report identified the presence of potential asbestos containing materials (ACM) forming part of the construction of buildings within the assessment area.

3.2 Aerial Photographs

Copies of aerial photographs obtained from the Department of Land and Property Information are included in **Appendix D**. Relevant information from the aerial photograph review is summarised below.

- **1943**: The Site appeared to comprise a number of residential allotments with defined approximately rectangular boundaries discernible. The central carpark area appeared to have previously been divided into individual properties. Although the image quality is poor, residential style structures were apparent on most of the Site area with the exception of the central northern portion, which was vacant. Immediately surrounding the Site, the High Street, Woodriff Street North, Henry Street and Station Street alignments were observed.

  The surrounding site area was primarily cleared and partially developed allotments comprising several residential and commercial style structures within the immediate vicinity of the Site. The quality of the aerial photograph precluded a detailed assessment of the Site or the surrounding areas.

- **1956**: Several of the previously (1943) unoccupied properties appeared to have been developed, with residential type structures observed on most properties.

  Since the previous aerial photograph (1943), the surrounding site area underwent significant development in the form of construction of residential and commercial structures. Large structures were observed south and north of the Site which were not present in the 1943

[10] *'Preliminary Environmental Site Assessment Report, 134 – 138 Henry Street Penrith NSW 2750'*, Geo-Logix Pty Ltd, Reference: 1601069Rpt01FinalV01_12Aug16, 12 August 2016, Geo-Logix (2016)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Aerial photograph, and many of the surrounding premises had undergone alterations to the built form.

- **1965**: The central portion of the Site was cleared and redeveloped into the Allen Place Car Park, largely as it appeared in the recent site inspection (26 May 2017). The properties on the northern boundary of the Site, abutting Henry Street, had all been demolished and reconstructed, except for 140-142 Henry Street. The dry cleaner (134-138 Henry Street) and structures along Station Street appeared to have been developed into their current form. The eastern section of the northern portion of the Site was occupied by a service station.

  The greater surrounding area appeared to have undergone significant residential and commercial redevelopment since the previous (1956) aerial photograph. Large commercial structures dominated the surrounding street frontage within this aerial photograph. Additionally, the extension of Henry Street was observed to the west of the Site.

- **1978**: Site structures were largely the same as the form observed during the Site inspection, except for the presence of the vehicular overbridge on the southern boundary. Properties at 114-116 and 140-142 Henry Street had been demolished and redeveloped between this and the previous (1965) aerial photograph, with development at 114-116 Henry Street unfinished in this photograph.

  Major redevelopment had continued to the west and east of the site comprising erection of large commercial premises and continued transformation of previously undeveloped land into car parks / commercial shop fronts.

- **1986**: The Site and surrounding area appeared to be consistent with the previous (1978) aerial photograph. Construction of the structure at 114-116 Henry Street had been completed since the previous aerial photograph. Minor additions/alterations to the built form of surrounding properties had occurred and some new structures were present.

- **1994**: The Site appeared largely the same as in the previous (1986) aerial photograph with the exception of additional vegetation in the garden areas. Two large buildings to the north and northwest of the Site had been constructed since the previous aerial photograph.

- **2005 - 2016**: The Site appeared similar to the previous aerial (1994) photograph. Large buildings continued to be erected within the surrounding area, comprising significant structures to the north, northwest and south of the Site.

3.3 EPA Records

Search of the NSW EPA database was undertaken on 8 November 2016 (**Appendix E**) for the Site and immediate surroundings. The search consisted of the:

- NSW EPA Protection of the Environment Act public register of licence, applications and notices (maintained under Section 308 of the *Protection of the Environment Operations Act 1997* (POEO Act));
- NSW EPA contaminated land public register of record of notices (under Section 58 of the *Contaminated Land Management Act 1997* (CLM Act)); and
- NSW contaminated sites notified to the EPA (under Section 60 of the CLM Act).

No prevention, clean-up or prohibitions notices and no transfer, variation, suspension, surrender or revocation of an environment protection licences has been issued under the POEO Act for the Site and immediate surroundings.

No notices have been issued under the CLM Act for the Site and immediate surroundings.

The Site and immediate surroundings are not on the list of NSW contaminated sites notified to the EPA.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3.4 Council Section 149 Certificates

A copy of the s149 Planning Certificates for three representative lots (Lot 1 DP 113118, Lot 3 DP1200790 and Lot 10 DP553665) were obtained from Penrith City Council on 10 November 2016 and previous ESA provided by the client has also included s149 Planning Certificates for two additional lots (Lot 1 DP252457 and Lot 1 DP 164798). Relevant details are summarised below and copies of s149 Planning Certificates are included in **Appendix F.**

Given the proximity of the properties, the general similarity of historical uses and environmental setting and the absence of heritage listing within the area, it is reasonable to assume that the section 149 certificates attained for the five lots are representative of all the properties within the Site.

- The land is subject to the requirements under the Penrith City Council Local Environmental Plan 2010;
- The land is currently zoned B3 Commercial Core or B4 Mixed Use (under the provisions of the Planning Proposal for the Penrith City Park) with the exception of Lot 3 DP 1200790 was zoned RE1 Public Recreation;
- The land does not comprise critical habitat;
- The land is not identified to be situated within a Conservation Area and is not identified as containing an item of environmental heritage significance;
- The land is not affected by the Coastal Protection code under the Coastal Protection Act 1979;
- The land is not affected by Section 15 of the Mine Subsidence Compensation Act 1961 proclaiming land to be a Mine Subsidence District.
- The land is not affected by any road widening or road realignment under Division 2 of Part 3 of the Roads Act, Penrith Local Environmental Plan 2010 or an environmental planning instrument;
- The land is not within an investigation area or remediation site under Part 3 of the Contaminated Land Management Act 1997;
- The land is not subject to an investigation order or remediation order within the meaning of the Contaminated Land Management Act 1997;
- The land is not subject to a voluntary investigation proposal (or voluntary remediation proposal) that is the subject of the Environment Protection Authority's agreement under section 15 or 26 of the Contaminated Land Management Act 1997;
- The land is not the subject of a site audit statement within the meaning of the Contaminated Land Management Act 1997; and
- All or part of the land is identified in Penrith LEP Clause 7.2 for Flood Planning. Development consent is required of any development on the land to which Clause 7.2 of the LEP applies.

3.5 Heritage

A search of the Australian Heritage Trust database did not reveal any heritage listed items at the Site or its immediate surrounds. Heritage information covers Aboriginal as well as European heritage.

A search of the NSW Heritage Inventory did not reveal any heritage listed items at the Site or immediate surrounds. Both Australian Heritage Trust and NSW Heritage information are included in **Appendix G**.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

3.6 SafeWork NSW Records

An application to search for licences for stored dangerous goods was submitted to SafeWork NSW on 10 November 2016. The report issued by SafeWork NSW is provided in **Appendix H.** No **d**angerous goods were identified to have been stored at the site. SafeWork NSW identified current storage of dangerous goods at an offsite address (117 Henry Street, Penrith) and has provided details pertaining to this licence. This is considered irrelevant to the current investigation.

3.7 Historical Land Title Records

Historical land title records from three separate lots have been summarised in **Table 3.1.** Detailed title search information is provided in **Appendix I**.

Table 3.1 Summary of Title Searches

Date of Acquisition and Term Held	Registered Proprietor(s) & Occupations where available	Reference to Title at Acquisition and Sale
Pertaining to Lot 10 in DP553665		
1.6.1881 (1881 to 1925)	Francis Henry Woodriff (Gentleman)	Book 222 No. 132
5.8.1925 (1925 to 1935)	John Jurry Allen (Farmer)	Book 1396 No. 195
23.2.1935 (1935 to 1948)	Alfred Charles Kemp (Orchardist)	Book 1711 No. 475
14.12.1948 (1948 to 1971)	Roy William Handley (Radio and Electrical Distributor)	Book 2075 No. 355
24.5.1971 (1971 to 1977)	Peter Shaw and Associates Pty Limited	Book 3011 No. 751 Now Vol 12193 Fol 76

3.8 Integrity Assessment and Summary of Site History

The Site has been used for residential and commercial purposes since available records indicate. The EPA searches did not indicate that any industrial or commercial activities occurred at, or within close vicinity of, the Site. No dangerous goods storage licences were identified to have been issued for the Site. Based on the range of sources and the general consistency of the historical information, it is considered that the historical assessment has an acceptable level of accuracy with respect to the potentially contaminating activities historically occurring at the Site.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

4. Conceptual Site Model

4.1 Potential Areas of Environmental Concern

Based on the Site history review and observations of site conditions during the detailed site inspection, Areas of Environmental Concern (AECs) and associated Contaminants of Potential Concern (COPCs) have been identified and are presented in **Table 4.1**. AECs are graphically represented alongside site features on **Figure 2.**

Table 4.1 Areas of Environmental Concern and Contaminants of Potential Concern

Area of Environmental Concern (AEC)	Contaminants of Concern (COC)
*134-138 Henry Street (Lot 1 DP164798, **Figure 2**)* Improper disposal of dry cleaning chemicals resultant from the operation of the dry cleaner.	Volatile organic compounds (VOCs).
*118 Henry Street (Lot 1 DP113118, **Figure 2**)* Improper management of petroleum hydrocarbons associated with the former service station.	Total recoverable hydrocarbons (TRH), BTEX and heavy metals.
Whole of Site. Fill materials of unknown origin observed to be present as a result of site development activities.	Heavy metals, polycyclic aromatic hydrocarbons (PAHs, TRHs / BTEX, organochlorine pesticides (OCPs) / polychlorinated biphenyls (PCB), VOCs and asbestos.
Whole of Site. Pesticide and herbicide application associated with onsite residential maintenance activities within surficial-moderately deep fill and natural soils.	OCPs, organophosphorus pesticides (OPPs).
Whole of Site Fuel and oil spills associated with onsite residential maintenance activities associated with the residential site use (grass mowing, garden work, home vehicle maintenance, etc.) within surficial-moderately deep fill and natural soils.	TRH, BTEX and heavy metals.
Whole of Site Hazardous building materials associated with existing / former site structures within fill materials.	Asbestos, PCBs and lead.

4.2 Known Contaminated Media

The preliminary ESA, undertaken on Lot 1 DP164798, comprised the advancement of two soil vapour investigation locations advanced through the floor of the dry-cleaner. Soil vapour sampling was undertaken and the two samples were analysed for a range of COPCs. Laboratory analysis of the samples identified the presence of chlorinated solvents (PCE, TCE and DCE) at concentrations exceeding the adopted commercial land use criteria. Additionally, BTEX compounds were identified above the laboratory LOR but below the adopted land use criteria. Soil vapour within the vicinity of Lot 1 DP164798 is considered to be impacted by VOCs.

No soil, material or groundwater assessment was undertaken as part of the preliminary ESA.

4.3 Potentially Contaminated Media

Each of the AECs and corresponding COPCs identified in **Table 4.1** have the potential to result in impact to soil and groundwater (not asbestos). Contaminants including VOCs, TRH and BTEX as associated with fill material, the dry cleaner and former services station also have the potential to result in soil vapour impacts.

It is anticipated the greatest level of potential impact will be to surface or shallow soils. This is a consequence of the surface application of the source of impact, generally comprising soil (waste, ash, lead paint, asbestos, etc) or liquids (fuels, pesticides/herbicides, lubricants, etc.). If impact is found in surface soils, it may be found to have leached / migrated deeper into the soil profile.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Where chlorinated solvents (PCE, TCE and DCE) are identified to be present within the soil vapour, there remains the potential for significant primary source impacts to exist deeper within the soil and/or groundwater at the Site.

Where fill materials are present, soils have been disturbed, or waste material buried, there is a potential that environmental impact may also be present at depth, consistent with the depth of the disturbance. Anthropogenic materials are commonly present in impacted fill materials and can be used as an indication of the depth of disturbance. Where fill materials impacted with chemical based contaminants are identified, there is a potential the impact may have migrated laterally and vertically below the fill material.

Natural soils at depth at the Site are considered potentially impacted by historical site activities (particularly fuel/oil storage and dry-cleaning). The extent of the impact to natural soils will be dependent upon the size and severity of the overlying impact as well as the properties of the natural soils.

4.4 Potential for Migration from Site

Contaminants generally migrate from site via a combination of windblown dusts, rainwater infiltration, groundwater migration and surface water runoff. The potential for contaminants to migrate is a combination of:

- The nature of the contaminants (solid/liquid and mobility characteristics);
- The extent of the contaminants (isolated or widespread);
- The location of the contaminants (surface soils or at depth); and
- The Site topography, geology, hydrology and hydrogeology.

The potential contaminants of concern identified as part of the Site history review and site inspection are generally in solid (e.g. asbestos and metals) liquid (e.g. TPH, PAH, BTEX, OCPs, OPPs and PCBs) or gaseous (e.g. VOCs, BTEX, Volatile TRH) form.

The ground surfaces overlying AECs are primarily comprised of sealed asphaltic or concrete pavements, building footprints with limited unsealed or vegetated ground. As such, there is considered to be a reasonable potential for water soluble contaminants present on hardstand pavements to migrate from the Site via infiltration into the municipal stormwater. Contaminants present within the soil profile are considered unlikely to migrate from the site via infiltration into the municipal stormwater system. Migration from the Site via infiltration into the groundwater is considered to be a likely pathway in the presence of significant liquid and/or liquid soluble (heavy metals) COPCs. Windblown dust is considered to be unlikely unless hardstands and/or vegetation is removed from the Site surfaces during site redevelopment/maintenance activities.

Given the nature of the AECs (dry-cleaning and service station), it is considered likely that localised impacts to soil, groundwater and/or soil vapour may be present at an extent which may result in migration of contamination at a scale where off-site migration would require to be addressed.

4.5 Potential Human and Ecological Receptors

Potential human receptors of environmental impact include future residents, visitors and construction/maintenance contractors engaged to work at the Site, who may potentially be exposed to COPCs through inhalation or direct contact with impacted soils or groundwater present within the Site. Additionally, migration of contaminants via infiltration into the groundwater, windblown dusts and windblown vapour also poses a risk to sensitive human receptors.

Should redevelopment of the Site occur, potential human receptors may in the future include:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Potential dermal contact with and ingestion of impacted soils / groundwater as present at shallow depths and/or accessible by future excavations by site workers and/or occupants; and/or
- Potential Inhalation of vapours migrating upwards and laterally from fill and/or natural soil.

The Site is primarily covered by hardstand pavements and building footprints, however several of the identified AECs have the potential to impact onsite ecological receptors. Possible off-site ecological receptors are limited to potential impacts associated with groundwater and surface runoff water (if present) migrating from the Site via the municipal stormwater system.

4.6 Potential and Complete Exposure Pathways

Future human receptors on the Site could be potentially exposed to soil contaminants by oral, dermal and inhalation pathways. Direct contact pathways (oral and dermal) will only be relevant for near surface soils for most site users. However, potential construction and future intrusive / excavation worker exposures could occur for deeper soils. Inhalation pathways are relevant where asbestos, volatile or semi-volatile COPCs are present.

4.7 Preferential Pathways

For the purpose of this assessment, preferential pathways have been identified as natural and/or man-made pathways that result in the preferential migration of COPC as either liquids or gasses.

Man-made preferential pathways are likely present throughout the Site, generally associated with areas of previously disturbed fill material, service easements, alluvial soil channels, and at near surface depths over the remainder of the Site. Fill materials, including those surrounding subsurface infrastructure, and disturbed natural soil are anticipated to have a higher permeability than the underlying natural soil and/or bedrock, with the exception of the highly permeable Nepean River Gravels anticipated at depth.

Nepean river gravels, anticipated to be present at depth, are considered to be a natural preferential pathway due to their high hydraulic conductivity.

4.8 Source to Receptor Pathway Summary

Table 4.2 below presents a summary of potential source to receptor pathways identified in **Section 4.1** to **4.7.**

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Table 4.2 Conceptual Site Model Source to Receptor Summary

Area of Environmental Concern	Contaminant of Potential Concern / Form	Pathway -> Uptake	Receptor
Lot 1 DP164798 (dry-cleaner)	VOCs / Liquid	Infiltration into the Groundwater -> Biological uptake into the ecosystem	Downstream ecological receptors (Peach Tree Creek) Current and future recreational users and construction/maintenance staff at Peach Tree Creek
		Physical contact -> Oral or dermal ingestion	Current and future construction/maintenance workers and/or occupants of the Site
	VOCs / vapour	Intrusion into buildings and ambient atmosphere -> Inhalation	Current/future site users (construction and maintenance workers and/or occupants)
Lot 1 DP113118 (former service station)	TRH, BTEX / liquid	Infiltration into the Groundwater -> Biological uptake into the ecosystem	Downstream ecological receptors (Peach Tree Creek) Current/future recreational users and construction maintenance staff at Peach Tree Creek
	TRH, BTEX / vapour	Intrusion into buildings and ambient atmosphere -> Inhalation	Current/future site users (construction/maintenance workers and/or occupants)
	Heavy metals / solid	Physical contact -> Oral or dermal ingestion	Current/future site users (construction/maintenance workers and/or occupants)
		Physical Contact -> Biological uptake into root systems	Current and future onsite sensitive ecological receptors (flora)
Whole of Site	Heavy metals / solid	Physical contact -> Oral or dermal ingestion	Current/future site users (construction and maintenance workers and/or occupants)
		Infiltration into the Groundwater -> Biological uptake into the ecosystem	Downstream ecological receptors (Peach Tree Creek) Current and future recreational users and construction/maintenance staff at Peach Tree Creek
	Asbestos / solid	Inhalation	Current/future site users (construction and maintenance workers and/or occupants)
		Off-site migration via windblown dust -> Inhalation	Off-site sensitive human and ecological receptors
		Physical Contact -> Biological uptake into root systems	Current and future onsite sensitive ecological receptors (flora)
	TPH, PAH, BTEX, OCPs, OPPs and PCBs / liquid	Infiltration into the Groundwater -> Biological uptake into the ecosystem	Downstream ecological receptors (Peach Tree Creek) Current and future recreational users and construction/maintenance staff at Peach Tree Creek
		Physical contact -> Oral or dermal ingestion	Current and future construction/maintenance workers and/or occupants of the Site
		Physical Contact -> Biological uptake into root systems	Current and future onsite sensitive ecological receptors (flora)

Version: 1, Version Date: 14/04/2021

5. Sampling and Analysis Plan

5.1 Data Quality Objectives

Data quality objectives (DQOs) were developed for the investigation, as discussed in the following sections.

5.1.1 State the Problem

It is understood that the Site owner, Penrith City Council, requires an assessment of the potential risks to human health and the environment associated with site contamination under proposed general development scheme for the Site (**Appendix J)** for the Site.

Information on potential site contamination conditions inferred from the desktop review and observations made during the site inspection resulted in the development of the conceptual site model presented in **Section 4.**

5.1.2 Identify the Decision

Based on the decision making process for assessing urban redevelopment sites detailed in DEC (2006[11]), the following decisions must be made:

- Are there any unacceptable risks to likely future onsite receptors?
- Are there any issues relating to background soil concentrations that exceed appropriate site soil criteria?
- Are there any impacts of chemical mixtures?
- Are there any aesthetic issues at the Site?
- Is there any evidence of, or potential for, migration of contaminants from the Site?
- Is a site management strategy required?

5.1.3 Identify Inputs to the Decision

Inputs identified to provide sufficient data to make the decisions nominated above include:

- Desktop review;
- Detailed site inspection/walkover;
- Physical observations and interpretation of fill and natural material through the collection of soil samples;
- Development of appropriate assessment criteria for evaluation of soil impacts;
- Field parameters measured utilising calibrated equipment during the intrusive investigation including physicochemical parameters of groundwater and assessment of volatile vapours emanating from soils;
- Laboratory analysis of soil, groundwater and soil vapour samples of potentially contaminated media for COPC; and
- Confirmation that data generated by sample analysis are of an acceptable quality to allow reliable comparison to assessment criteria by assessment of quality assurance / quality control as per the data quality indicators established in **Section 5.1.6**.

Specifically, sufficient data needs to be collected from each of the identified potentially impacted media in the identified AEC for the associated COPC (**Table 4.1**).

[11] *'Contaminated Sites: Guidelines for the NSW Site Auditor Scheme, 2nd* Edition', NSW Environmental Protection Authority, EPA 2006

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

5.1.4 Define the Study Boundaries

The study boundaries are limited to the cadastral boundaries of the Site. The Site area and approximate Map Grid of Australia (MGA) boundary points are shown on **Figure 2.** The vertical extent of the investigation was to a maximum depth of 15 m, with analysis of soil samples to a maximum depth of 2.0 m bgs.

Due to the project objectives, seasonality was not assessed as part of this investigation. Data are therefore representative of the timing and duration of the current investigation.

5.1.5 Develop and Decision Rule

Soil analytical data were assessed against the appropriate criteria as identified in **Section 6**. Statistical analyses of the data were undertaken, where appropriate in accordance with relevant guidance documents. The following statistical criteria were adopted:

- The 95 % Upper Confidence Limit (UCL) on the average concentration for each analyte (calculated for samples collected from consistent soil horizons, stratigraphy or material types) must be below the adopted criterion;
- No single analyte concentration shall exceed 250 % of the adopted criterion; and
- The standard deviation of the results must be less than 50 % of the criterion.

Statistical analyses were undertaken on datasets generated from environmental samples taken within distinct general site use areas. Where redevelopment of individual lots is proposed, the statistical analyses undertaken are not applicable and analytical data from within the proposed redevelopment lots would need to be assessed independently.

The decision rules adopted to answer the decisions identified in **Section 5.1.2** are summarised in **Table 5.1**.

Table 5.1 Summary of Decision Rules

Decisions Required to be Made	Decision Rule
1. Are there any unacceptable risks to onsite future receptors?	Analytical data was compared against EPA endorsed criteria. Statistical analysis of the data was completed in accordance with relevant guidance documents, as appropriate, to facilitate the decisions. The criteria in **Section 6.2**, and the following statistical criteria were adopted with respect to soils: Either: the reported concentrations were all below the Site criteria; Or: the average site concentration for each analyte was below the adopted site criterion; no single analyte concentration exceeded 250% of the adopted site criterion; and the standard deviation of the results was less than 50% of the Site criterion; And: the 95% UCL of the average concentration for each analyte was below the adopted site criterion. If the statistical criteria stated above were satisfied, the answer to the decision was No. If the statistical criteria were not satisfied, the answer to the decision was Yes.
2. Are there any background contamination issues?	Background soil concentrations as detailed in Trace Element Concentrations in Soils from Rural and Urban Areas of Australia (Henry Olzworthy *Et Al*. 1995[12]) were used for comparison of site soil data. If there were any contaminants at concentrations substantially outside background ranges, then the answer was yes, otherwise the answer was no
2. Are there any chemical mixtures?	Was there more than one group of contaminants present which increase the risk of harm? If there was, the answer to the decision was Yes. Otherwise, the answer to the decision was No.

[12] '*Trace Element Concentrations in Soils from Rural and Urban Areas of Australia*', Henry Olszowy *Et Al*., (Henry Olszowy *et Al.* 1995)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Decisions Required to be Made	Decision Rule
3. Are there any aesthetic issues?	If there were any Asbestos Containing Material (ACM) fragments on the ground surface, any unacceptable odours, any soil discolouration, or excessive amounts of anthropogenic material, the answer to the decision was Yes. Otherwise, the answer to the decision was No.
4. Is there any evidence of, or potential for, migration of contaminants from the Site?	Based on assessment results, was there any evidence of, or the potential for, unacceptable contaminant concentrations to migrate from the Site? If yes, the answer to the decisions was Yes. Otherwise, the answer to the decision was No.
5. Is a site management strategy required?	Is the answer to any of the above decisions Yes? If yes, a site management strategy is required to address unacceptable contamination concerns at the Site so as to make the Site suitable for permissible site uses. If no, a site management strategy is not required and the Site is considered suitable, from a contamination view point for the proposed use.

5.1.6 Specific Limits on Decision Errors

This step is to establish the decision maker's tolerable limits on decision errors, which are used to establish performance goals for limiting uncertainty in the data. Data generated during this project must be appropriate to allow decisions to be made with confidence.

Specific limits for this project have been adopted in accordance with the appropriate guidance from the NSW EPA, National Environmental Protection Measure (NEPM) (NEPC 2013[13]), appropriate Data Quality Indicators (DQIs, used to assess quality assurance / quality control) and standard JBS&G procedures for field sampling and handling.

To assess the usability of the data prior to making decisions, the data will be assessed against pre-determined DQIs for to precision, accuracy, representativeness, comparability, completeness and sensitivity (PARCCS parameters). The acceptable limit on decision error is 95% compliance with DQIs.

The pre-determined DQIs established for the project are discussed below in relation to the PARCCS parameters, and are shown in **Table 5.2**.

- **Precision** – measures the reproducibility of measurements under a given set of conditions. The precision of the laboratory data and sampling techniques is assessed by calculating the Relative Percent Difference (RPD) of duplicate samples.
- **Accuracy** – measures the bias in a measurement system. The accuracy of the laboratory data that are generated during this study is a measure of the closeness of the analytical results obtained by a method to the 'true' value. Accuracy is assessed by reference to the analytical results of laboratory control samples, laboratory spikes and analyses against reference standards.
- **Representativeness** – expresses the degree which sample data accurately and precisely represent a characteristic of a population or an environmental condition. Representativeness is achieved by collecting samples on a representative basis across the Site, and by using an adequate number of sample locations to characterise the Site to the required accuracy.
- **Comparability** – expresses the confidence with which one data set can be compared with another. This is achieved through maintaining a level of consistency in techniques used to collect samples; and ensuring analysing laboratories use consistent analysis techniques; and reporting methods.

[13] National Environmental Protection (Assessment of Site Contamination) Measure 1999. As compiled 16 May 2013 National Environmental Council (NEPC 2013)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- **Completeness** – is defined as the percentage of measurements made which are judged to be valid measurements. The completeness goal is set at there being sufficient valid data generated during the study.
- **Sensitivity** – expresses the appropriateness of the chosen field and laboratory methods, including the limits of reporting, in producing reliable data in relation to the adopted site assessment criteria.

Table 5.2 Data Quality Indicators

Data Quality Indicators	Frequency	Data Quality Criteria
Precision		
Split duplicates (intra laboratory)	1 / 20 samples	<50% RPD[1]
Blind duplicates (inter laboratory)	1 / 20 samples	<50% RPD[1]
Laboratory Duplicates	1 / 20 samples	<50% RPD[1]
Accuracy		
Surrogate spikes	All organic samples	70-130%
Laboratory control samples	1 per lab batch	70-130%
Matrix spikes	1 per lab batch	70-130%
Representativeness		
Sampling appropriate for media and analytes	All samples	-[2]
Samples extracted and analysed within holding times.	-	Soil: organics (14 days), inorganics (6 months)
Laboratory Blanks	1 per lab batch	<LOR
Trip spike	1 per lab batch	70-130% recovery
Storage blank	1 per lab batch	<LOR
Rinsate sample	1 per sampling event/media	<LOR
Comparability		
Standard operating procedures for sample collection & handling	All Samples	All Samples
Standard analytical methods used for all analyses	All Samples	NATA accreditation
Consistent field conditions, sampling staff and laboratory analysis	All Samples	All samples[2]
Limits of reporting appropriate and consistent	All Samples	All samples[2]
Completeness		
Sample description and COCs completed and appropriate	All Samples	All samples[2]
Appropriate documentation	All Samples	All samples[2]
Satisfactory frequency and result for QC samples		95% compliance
Data from critical samples is considered valid	-	Critical samples valid
Sensitivity		
Analytical methods and limits of recovery appropriate for media and adopted Site assessment criteria	All samples	LOR ≤ site assessment criteria

[1] If the RPD between duplicates is greater than the pre-determined data quality indicator, a judgment will be made as to whether the excess is critical in relation to the validation of the data set or unacceptable sampling error is occurring in the field.

[2] A qualitative assessment of compliance with standard procedures and appropriate sample collection methods will be completed during the DQI compliance assessment.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

5.2 Optimise the Design of Obtaining Data

Various strategies for developing a statistically based sampling plan are identified in *Contaminated Sites: Sampling Design Guidelines* (EPA 1995), including judgemental, random, systematic and stratified sampling patterns. The adopted sampling methodology is discussed in the following sections.

5.2.1 Soil, Groundwater and Soil Vapour Investigation Program

EPA 1995 recommends that 30 sampling points are conducted for sites up to 2.0 ha.

The presence of significant building footprints precluded the assessment of the site via systematic sampling. As such, a combination of systematic and judgemental sampling was undertaken.

A total of 20 soil investigation locations were placed on a generally systematic grid. An additional eight locations were targeted towards AECs identified during the preliminary ESA, Geo-logix (2016)), desktop review and site inspection phases of the assessment.

The soil sampling and analysis program is presented in **Table 5.3**.

A total of three groundwater monitoring wells were installed as part of the intrusive geotechnical investigation. All three wells were sampled for the purposes of assessing the potential for groundwater contamination at the Site.

A total of ten targeted soil vapour locations were installed surrounding AECs identified to have the potential for soil vapour impacts.

5.2.2 Soil Sampling Methodology

Soil sampling was completed via a combination of manual and mechanical excavation using hand auger, push tube and solid flight auger drilling methods. Soil samples were generally collected from the soil surface or immediately underlying hardstand pavements, and then 0.5 m intervals to a maximum depth of 1.9-2.0 m bgs. Where significantly differing soil stratigraphy was encountered, the soil sampling density was increased to ensure that each material type was sampled for potential analysis.. Soil samples were collected from the surface to natural materials at every investigation location.

During the collection of soil samples, features such as seepage, discolouration, staining, odours and other indicators of contamination were noted. A calibrated Photo Ionisation Detector (PID) was utilised to screen for volatile organic compounds (VOCs) within the sampled material. Calibration records are presented in **Appendix K**.

Soil samples were collected using a trowel and new pair of nitrile gloves and immediately transferred to laboratory supplied sample jars and bags. The sample containers were then transferred to a chilled esky for sample preservation prior to and during shipment to the testing laboratory. A chain-of-custody form was completed and forwarded with the samples to the testing laboratory. Based upon field observations, samples were analysed in accordance with the analytical schedule detailed in **Table 5.3**.

5.2.3 Groundwater Sampling Methodology

Groundwater Monitoring Well Installation

Three geotechnical investigation locations conducted by PSM were converted into groundwater monitoring wells. Two monitoring wells were installed along the southern border of the Site and one directly adjacent to the dry cleaner to assess groundwater conditions at the boundaries of the site.

Each of the wells was installed to 12 m below ground surface (bgs). The wells were constructed from 50 mm unplasticised polyvinyl chloride (uPVC) screen and casing, combined with a lockable cap and steel gatic cover. The screen was installed such that the encountered water level was within the screened interval, allowing for the detection of Light Non-Aqueous Phase Liquids (LNAPLs), if

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

present. Surrounding the uPVC screen a graded (2mm) sand was utilised to construct a 'gravel pack' which limited clogging of the screen with excess soils. Additionally, above the screened interval, a bentonite seal was installed to reduce the potential for surface water, perched water and/or liquid phase contaminants to enter the well. The steel gatic cover was installed in concrete consistent with the surrounds.

Well Development and Sampling

After installation, the monitoring wells were developed to remove excess silt and sediment resultant from the installation process. The wells were then allowed to settle for a week prior to sampling.

Each monitoring well was then gauged with an Interface Probe (IP) which can detect Non-Aqueous Phase Liquids (NAPLs). If NAPLs were present within the well they were collected with a disposable plastic bailer. If no significant NAPLs were present, the groundwater at each well was then purged with a low flow peristaltic pump, using fresh disposable Low Density Poly-ethylene (LDPE) tubing and silicon, to remove the standing water. During removal, physiochemical parameters (pH, electrical conductivity, dissolved oxygen, reduction-oxidation potential and temperature) were monitored until stabilisation. Groundwater samples were taken from the end of the disposable LDPE tubing after parameter stabilisation has occurred.

Collected groundwater samples were immediately filtered (as necessary) and transferred to laboratory supplied sample bottles. The sample containers were then transferred to a chilled iced box for sample preservation prior to and during shipment to the testing laboratory. A chain of custody form was completed and forwarded with the samples. Samples were analysed in accordance with the laboratory schedule (**Table 5.3**).

5.2.4 Soil Vapour Sampling Methodology

Ten soil vapour probes were installed surrounding identified dry-cleaner and former service station. Soil vapour probes were installed via the following process:

- Clearance of proposed soil vapour locations by a professionally licenced service locator;
- Puncture of surface hardstand (concrete or asphaltic pavement) via rotary hammer drill, with a 20 mm drill bit, through to the underlying soils;
- 'Flossing' of the drill hole to remove excess concrete dust and/or soil;
- Installation of a 200 – 400 mm nylon tube, fitted with steel mesh filter on the bottom and closed three-way on the accessible end, into the drill hole;
- Sealing of the drill hole via application of of air drying clay covered by a concrete/bentonite slurry;
- Application of a 'shroud' comprising an air tight container lined with isopropyl alcohol doused material to the base of the nylon tube, where sealed in place with the bentonite slurry;
- Purging of the drill hole via pumping through a calibrated mx6 multi-gas detector;
- Concentrations of oxygen (O_2), VOCs and carbon dioxide (CO_2) were monitored throughout purging until stabilization had occurred;
- Where detections of VOCs indicated a leak was present and isopropyl alcohol vapour was intruding into the nylon tube, the soil vapour probe was removed and reinstalled;
- Where purging was successful, and no leak was indicated by monitored parameters, 6.0 L of soil vapour was removed from the sub-slab vapour probe using a 140 mL hand drawn syringe. The syringe was connected to the back end of a carbon tube with a separate three-

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

way valve, allowing for soil vapour to be drawn over the activated carbon, and then expelled through an exhaust valve; and

- Removal of the soil vapour probe post-sampling and reinstatement of the drill hole with concrete, consistent with the surrounds.

5.2.5 Decontamination

Prior to the commencement of sampling activities, non-disposable sampling equipment, including the hand trowel and hand auger, was cleaned with a high-pressure water/detergent spray, rinsed with water and then air dried. The equipment was then inspected to ensure that no soil, oil, debris or other contaminants were apparent on the equipment prior to the commencement of works.

Push tube sleeves were removed from the advancement casing and laid on clean plastic sheets for inspection, soil samples were collected directly from the push tube sleeve. A new pair of disposable nitrile gloves were used to collect each sample.

Sampling equipment including, hand trowels, hand augers and the push tube head were subsequently decontaminated using the above process between each sampling location and new disposable liners were used at each location advanced via push tube. Decontamination records are presented in **Appendix K**.

A rinsate sample from the trowel was collected at the completion of field sampling activities to determine the effectiveness of the decontamination procedures implemented on re-usable sampling equipment.

5.2.6 Duplicate and Triplicate Sample Preparation

At selected sample locations, sufficient soil or groundwater was collected to provide a primary, blind (intra-laboratory) duplicate and split (inter-laboratory) duplicate (triplicate) sample using the sampling methodology outlined above.

The collected soil samples were divided laterally into three samples with minimal disturbance to reduce the potential for loss of volatiles and placed in three clean glass jars and sample bags as appropriate. Soil samples were not homogenised in order to minimise the loss of volatiles.

The collected groundwater samples were extracted from the groundwater wells after purging and placed consecutively into the primary, blind and split duplicates. Groundwater samples were not homogenised in order to minimise the loss of volatiles.

The collected soil vapour samples were extracted from soil vapour probes after purging. The soil vapour probe at location SV01 was left for a period of 1 hour after the primary soil vapour sample was extracted to allow for pressure equalization and then subsequently resampled to collect a blind duplicate. A split duplicate was not collected for soil vapour samples due to the inconsistency of analytical laboratory methods.

Each sample was labelled with primary, duplicate or triplicate sample identification before being placed in the same chilled esky for transport to the laboratory.

5.2.7 Laboratory Analysis

JBS&G contracted Eurofins MGT (Eurofins) as the primary laboratory for the required chemical analyses. The secondary laboratory was Envirolab Services Pty Ltd (Envirolab). Both laboratories were NATA accredited for the required analyses. In addition, the laboratories were required to meet JBS&G's internal quality assurance/quality control (QA/QC) requirements. The completed analysis schedule is summarised in **Table 5.3.**

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Table 5.3 Analytical Schedule

Sample Type	No. of Sampling Locations	Analyses (exc. QA/QC)
Soil	20 borehole sampling locations 8 hand auger locations	Heavy metals (As, Cd, Cr, Cu, Hg, Ni, Pb, Zn) – 35 samples TRH/BTEX – 20 samples PAH/Phenols – 20 samples VOCs – 15 samples Asbestos – 20 samples (500 ml NEPC 2013) + visual OCPs – 8 samples PCBs – 8 samples Ecological parameters – 4 samples
Vapour	10 sub-slab vapour locations	VOCs 8260 – 10 samples TRH – 3 samples Isopropanol – 10 samples
Water	3 Groundwater Wells	Heavy metals (As, Cd, Cr, Cu, Hg, Ni, Pb, Zn) – 3 samples TRH/BTEX – 3 samples PAH low levels – 3 samples VOCs – 3 samples

In addition to the above primary analyses, to address the DQIs, field duplicate and triplicate soil samples were analysed at a rate of one per 20 primary samples. A rinsate sample was obtained from non-disposable soil sampling equipment each day that soil or groundwater sampling was undertaken, plus a single trip spike and single trip blank accompanied each sample batch.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

6. Assessment Criteria

6.1 Regulatory Guidelines

Development of site assessment criteria and the associated scope of investigation was undertaken with consideration to aspects of the following guidelines, as relevant:

- *National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013 (No. 1)*, National Environment Protection Council (NEPC 2013);
- *Contaminated Sites: Sampling Design Guidelines*, NSW EPA, 1995 (EPA 1995);
- *Contaminated Sites: Guidelines for Consultants Reporting on Contaminated Sites*, NSW OEH, 2011 (OEH 2011); and
- *Contaminated Sites: Guidelines for the NSW Site Auditor Scheme*, 2nd Edition, NSW EPA, 2006 (DEC 2006).

6.2 Assessment Criteria Selection

As per the decision process for assessment of urban development site (DEC 2006), a set of health and ecological assessment thresholds derived from NEPC (2013) was used for evaluation of site contamination data collected for this assessment. Given the proposed mixed uses of the Site (residential, public open space and commercial/industrial), as noted in **Section 1.1**, the Site has been compared distinct land use criteria for each of the proposed development areas. The western site portion falls within the 'Proposed Green Spaces' and the eastern portion of the Site falls within the Proposed Building Development and Green Spaces portion (as shown on **Figure 2**). The Site is zoned Commercial Core (B3) and Public Recreation (RE1) under the Penrith Local Environmental Plan 2010 (Penrith 2010).

Where there are no NSW EPA endorsed thresholds for individual COPC the laboratory limit of reporting (LOR) was adopted as an initial screening value for the purposes of this assessment.

The results of asbestos analysis were assessed in general accordance with NEPC (2013) including DOH (2009[14]) guidance.

The adopted site criteria are presented in **Table A,** the soil analytical summary tables. Relevant guidelines have been adopted from Section 6 of Schedule B1 NEPC (2013) and are presented below:

Health Based Criteria

Relevant tables:

- Table 1A(1) 'Health Investigation Levels for Soil contaminants';
- Table 1A(2) 'Interim Soil Vapour Health Investigation Levels for Volatile Organic Chlorinated Compounds';
- Table 1A(3) Soil HSLs for Vapour Intrusion;
- Table 1A(4) Groundwater HSLs for Vapour Intrusion; and
- Table 1A(5) Soil Vapour HSLs for Vapour Intrusion.

Proposed Building Development and Green Spaces

Land use scenarios adopted:

[14] *Guidelines for the Assessment Remediation and Management of Asbestos-Contaminated Sites in Western Australia*, May 2009. Western Australia Department of Health (DOH), (DOH 2009)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Residential with minimal opportunities for soil access; includes dwellings with fully and permanently paved yard space such as high-rise buildings and apartments (HIL-B and HSL-B);
- Public open space such as parks and playgrounds (HIL-C and HSL-C);
- Commercial/industrial; including premises such as shops and offices (HIL-D and HSL-D);

Proposed Green Spaces

The land use scenario adopted for Proposed Green Spaces site portion is 'public open space such as parks and playgrounds (HIL-C and HSL-C)'

Ecological Screening Levels

Ecological Screening Levels (ESLs) for the site were obtained from Table 1B(6) 'ESLs for TPH Fractions F1-F4, BTEX and Benzo(a)pyrene in Soil' under 'Urban residential and public open space' and 'commercial and industrial' land use scenarios.

Management Limits

Management limits for consideration of the formation of Light Non-Aqueous Phase Liquids (LNAPLS), fire and explosive hazards, and effects on buried infrastructure have been obtained from Table 1B(7) 'Management Limits for TPH Fractions F1-F4 in Soil' under 'Urban residential and public open space' and 'commercial and industrial' land use scenarios. Based on site observations discussed in **Section 8.1**, a fine soil texture was adopted for comparison of results.

6.2.1 Groundwater Investigation Levels

No registered groundwater bores have been identified as being used for the extraction of drinking water and given the urbanised nature of the Site, it is not expected that water within the relevant aquifer is utilised by the public for the purposes of drinking through direct extraction. However, as a conservative criteria set, the health and aesthetics based Australian Drinking Water Guidelines NWQMS (2016[15]) for drinking water have been adopted for the purposes of the assessment. A conservative criteria set for the assessment of worker exposure risk during redevelopment works involving interaction with groundwater has been adopted from the NWQMS (2016) as 10x the drinking water criteria for health and aesthetics.

To assess the potential risk of contaminated groundwater migrating from the Site to Peach Tree Creek, reference has been made to the Australian and New Zealand Guidelines for Fresh and Marine Water Quality ANZECC ARMCANZ (2000[16]) Table 3.4.1 'Trigger values for toxicants at alternative levels of protection'. Given the heavily urbanised nature of the receiving water body, a 95 % protection of species value has been adopted.

6.2.2 Derivation of Site Specific Ecological Investigation Levels

Site specific EILs were derived in accordance with the methodology outlined within NEPC (2013). Added Contaminant Limits (ACLs) were obtained from the following tables within the NEPC (2013):

- Table 1B(1) Soil-specific Added Contaminant Limits for Aged Zinc in Soil;
- Table 1B(2) Soil-specific Added Contaminant Limits for Aged Copper in Soil;
- Table 1B(3) Soil-specific Added Contaminant Limits for Aged Chromium III and Nickel in Soil;
- Table 1B(4) Generic Added Contaminant Limits for Lead In Soils Irrespective of Their Physicochemical Properties; and

[15] *'Australian Drinking Water Guidelines 6'*, National Water Quality management Strategy, Version 3.3, November 2016, NWQMS (2016)

[16] *'Australian and New Zealand Guidelines for Fresh and Marine Water Quality – The Guidelines'*, October 2000, Australian and New Zealand Environment and Conservation Council / Agriculture and Resource Management Council of Australia and New Zealand, Volume 1, Chapters 1-7, ANZECC ARMCANZ (2000)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Table 1B(5) Generic EILs for Aged Arsenic, Fresh DDT and Fresh Naphthalene in Soils Irrespective of Their Physicochemical Properties.

Four representative soil samples (JB01 1.1-1.2, JB11 0.35-0.45, JB12 1.1-1.2 and JB20 1.9-2.0) were submitted for laboratory analysis to determine physical parameters including Cation Exchange Capacity (CEC), pH and % Clay. Detailed laboratory reports and chain of custody documentation is provided in **Appendix L**.

Values for Average Background Concentrations (ABCs) were obtained from Trace Element Concentrations in Soils from Rural and Urban Areas of Australia (Henry Olzworthy *Et Al*. 1995).

Table 6.1 details ABCs, Added Contaminant Limits and derived EILs. All values are in mg/kg unless otherwise specified.

Table 6.1 Derivation of EILs

Physical Parameters

7. Quality Assurance/Quality Control

7.1 QA/QC Results

Analysis of the Quality Analysis / Quality Control (QA/QC) has been undertaken for the analytical results as summarised in **Table 7.1** and discussed in **Section 7.2**. Detailed QA/QC results are included in the laboratory reports in **Appendix L**, and in the Quality Assurance/Control in **Appendix M.**

Table 7.1 QA/QC Results Summary

Data Quality Indicator	Results	DQI met?
Precision		
Soil Blind duplicates (intra laboratory)	0-98 % RPD Intra laboratory samples were analysed at a rate greater than 1 in 20 samples.	Partial[1]
Soil split duplicates (inter laboratory)	0-61 % RPD Inter laboratory samples were analysed at a rate greater than 1 in 20 samples.	Partial[1]
Groundwater blind duplicates (intra laboratory)	0-100 % RPD Intra laboratory samples were analysed at a rate of 1 in 3 samples.	Partial[1]
Groundwater split duplicates (inter laboratory)	0-153 % RPD Inter laboratory samples were analysed at a rate of 1 in 3 samples.	Partial[1]
Soil vapour blind duplicate (intra laboratory)	0 % RPD Intra laboratory samples were analysed at a rate of 1 in 10 samples.	Yes
Laboratory duplicates	0-50 % RPD Intra laboratory samples were analysed at a rate of 1 in 20 samples.	Yes
Accuracy		
Surrogate spikes	INT-139% Recovery Surrogate spikes were completed for all organic samples	Partial[1]
Laboratory Control Samples	54-130 % Recovery Laboratory control samples were completed for all organic and metals samples	Partial[1]
Matrix spikes	51- 131% Recovery Matrix spikes were completed for all organic and metals samples	Partial[1]
Representativeness		
Sampling appropriate for media and analytes	All sampling conducted in accordance with JBS&G procedures	Yes
Laboratory blanks	<LOR – EQL	Partial[1]
Samples extracted and analysed within holding times.	Samples analysed for VOCs were extracted outside of holding times	Partial[1]
Trip spikes	85%-111%	Yes
Trip blanks	<LOR	Yes
Rinsate blank	<LOR-EQL	Partial[1]
Comparability		
Standard operating procedures used for sample collection & handling	Three JBS&G field scientists used standard operating procedures throughout works.	Yes
Standard analytical methods used	Standard analytical methods used as listed detailed in **Appendix L**	Yes
Consistent field conditions, sampling staff and laboratory analysis	Sampling was conducted by three field staff members using standard operating procedures in the same conditions throughout the works. The laboratories remained consistent throughout the investigation.	Yes
Limits of reporting appropriate and consistent	Limits of reporting were consistent and appropriate.	Yes
Completeness		

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Data Quality Indicator	Results	DQI met?
Soil description & Chains of Custody completed	All borehole logs and Chains of Custody were completed appropriately.	Yes
Appropriate documentation	All appropriate field documentation processes were undertaken. Borehole logs and Calibration/ Decontamination records are included as **Appendix K**.	Yes
Satisfactory frequency/result for QC samples	The QC results are considered adequate for the purposes of the investigation.	Yes
Data from critical samples is considered valid	Data from critical samples is considered valid.	Yes
Sensitivity		
Analytical methods and limits of recovery appropriate for media and adopted site assessment criteria	Appropriate laboratory analysis methods and detection limits were considered to have been achieved during the field and laboratory phases of this investigation.	Partial[1]

1. See discussion of DQI exceedances in **Section 7.2**.

7.2 QA/QC Discussion

7.2.1 Precision

Soil Duplicates

The primary soil sample analytical results were within the acceptable limits of deviation from the intra laboratory duplicate analytical results for all analytes with the exception of the following:

- Copper (55 % - JB09 0.15-0.20 and QC20170506-2); and
- Zinc (98 % - JB09 0.15-0.2 and QC20170506-2).

The primary soil samples analytical results were within the acceptable limits of deviation from the inter laboratory duplicate analytical results for all analytes with the exception of the following:

- Arsenic (6 % - JB18 0.1-0.2 and QA20170506-1);
- Chromium (36 % - JB09 0.15-0.2 and QA20170506-2); and
- Copper (60 % - JB09 0.15-0.2 and QA20170506-2).

The RPDs for the intra-laboratory and inter-laboratory duplicates are presented in **Appendix M** and are considered to be the result of heterogeneity in the soil samples collected. The elevated RPD results are not considered to influence the outcome of the investigation.

Groundwater Duplicates

The primary groundwater samples were within the acceptable limits of deviation from the intra laboratory duplicate analytical results for all analytes with the exception of the following analytes:

- Mercury (inorganic) (67 % - PSM01 and QC01-W);
- TPH Fraction C_{15}-C_{28} (93 % - PSM01 and QC01-W); and
- TRH Fraction C_{16}-C_{34} (100 % - PSM01 and QC01-W).

The primary groundwater samples agreed with the inter laboratory duplicate analytical results for all analytes with the exception of the following analytes:

- Mercury (inorganic) (67 % - PSM01 and QC01-W/A);
- TPH Fraction C_{15}-C_{28} (144 % - PSM01 and QC01-W/A); and
- TRH Fraction C_{16}-C_{34} (153 % - PSM01 and QC01-W/A).

The RPDs for the intra-laboratory and inter-laboratory duplicates are presented in **Appendix M** and are considered to be the result of heterogeneity in the groundwater samples collected. The elevated RPD results are not considered to influence the outcome of the investigation.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Soil Vapour Duplicates

The primary soil vapour sample analytical results agreed with the intra laboratory duplicate analytical results for all analytes.

All laboratory duplicates returned RPDs within the acceptable limits.

On this basis the DQIs for precision are considered to have been achieved for this investigation.

7.2.2 Accuracy

Surrogate spike recoveries were within the acceptable range of 70-130%, with the exception of the following over-recoveries:

OCP Surrogates:

- Dibutylchlorendate with a recovery of 134 % in sample JB11 0.05-0.15.

PAH Surrogates:

- p-terphenyl-d14 with recoveries of 134 % (JB01 0.05-0.3), 142 % (RINS 6-5-17) and 145 % (RINS 7-5-17); and
- 2-Fluorobiphenyl with a recovery of 146 % (JHA01 0.25-0.4).

VOC Surrogates:

- 4-bromofluorobenzene with recoveries of 141 % (JB17 0.1-0.25) and 149 % (JB14 0.1-0.3); and
- fluorobenzene with a recovery of 132 % in sample SV05_FRONT.

These deviations from the acceptance criteria were not considered to have an impact on the conclusions of this assessment as no OCP, PAH or VOC compounds were reported above the assessment criteria in any of the analysed samples. Given the potential for over-reporting indicated by these deviations from the accuracy DQO, the actual concentrations of OCP, PAH or VOC compounds are likely to be less than those reported in these samples. The following under-recoveries of surrogates occurred:

OCP Surrogates:

- Tetrachloro-m-xylene with a recovery of 62 % in sample RINS 26-5-17.

PAH Surrogates:

- No recovery percentage was provided for 2-Fluorobiphenyl in sample RINS 26-5-17, laboratory notes indicated that interference occurred within the sample matrix. 2-Fluorobiphenyl was reported to be recovered 67 % (PSM01), 67 % (PSM02), 68 % (PSM03) and 63 % (QC01_W); and
- No recovery percentage was provided for p-Tertphenyl-d14 in sample RINS 26-5-17, laboratory notes indicated that interference occurred within the sample matrix. p-Tertphenyl-d14 was reported to be recovered 67 % in sample JHA04 0.2-0.4.

VOC Surrogates:

- Fluorobenzene with a recovery of 67 % (RINS 26-5-17), 63 % (JHA07 0.4-0.6), 59 % (JHA07 1.3-1.5), 68 % (PSM01), 69 % (QC01_W) and 59 % (QC20170526-1);
- 4-Bromofluorobenzene with a recovery of 68 % (JHA01 0.25-0.4), 63 % (JHA02 0.3-0.5) and 65 % (JHA06 0.4-0.6).

Interference in the sample matrix RINS 26-5-17 and potential under reporting of COPCs is not considered to have affected the accuracy of the dataset for drawing conclusions with respect to the

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

decision rules noted in **Section 5.1.5**. It is noted that all samples listed above were within the NATA acceptable limits of 50-150 %, with the exception of the interference noted within RINS 26-5-17, for the analytical methods undertaken.

Laboratory control sample (LCS) recoveries were within the acceptable range of 70-130% except for two speciated phenols. Slight under recoveries for speciated phenols are not considered to have resulted in deviation, from DQOs pertaining to accuracy, such that the dataset cannot be relied upon for making the decisions listed in **Section 5.1.5.**

Matrix spike recoveries were within the acceptable range of 70-130% except for sample JHA06 1.0-1.2. A matrix spike for OCPs was undertaken in which a recovery of 51 % was achieved, indicating sample matrix interference. No OCPs were detected within this sample, and the LOR was significantly less than the site criteria for all OCPs. Under-recovery for this sample is still within the tolerable limits with regards to making decisions using the dataset.

On this basis the DQIs for accuracy are considered to have been achieved for this investigation.

7.2.3 Representativeness

The extraction and analysis of selected soil samples was completed within the recommended holding times for all analytes.

A rinsate sample was collected following decontamination of all non-disposable sampling equipment for each day of the primary soil sampling event and the subsequent targeted soil sampling / groundwater monitoring event. All analyte concentrations in the rinsate blanks were below the laboratory limit of reporting (LOR) with the exception of chromium and copper. Chromium (in RINS 6-5-17 and 7-5-17) and copper (RINS 26-5-17) were detected at the reporting limit. No statistically significant exceedances of the site criteria for these heavy metals were reported and therefore the potential for cross contamination has not detrimentally affected the representativeness of the dataset for the intended purpose. Decontamination records are presented in **Appendix K**.

A trip spike was submitted with the soil samples collected during the assessment. Trip spike recoveries for analytes was within the acceptable limit of 70-130%.

A trip blank was submitted with each laboratory batch for soil or groundwater samples collected during the assessment. There were no reported concentrations of BTEX compounds above the laboratory LOR.

All laboratory blanks analysed reported analyte concentrations less than the laboratory LOR with the exception of the following:

- 4-Nitrophenol (0.001 mg/L);
- Benzo(a)anthracene (0.001 mg/L);
- Benzo(b&j)fluoranthene (0.001 mg/L); and
- Chrysene (0.001 mg/L).

No detections of the aforementioned analytes were reported at or near the adopted site criteria, therefore potential laboratory contamination has not affected the reliability of the dataset for the intended purpose.

All field equipment was decontaminated appropriately as per the procedure identified in **Section 5.2.3**. Collected samples were immediately placed into the sample containers, sealed and then placed into chilled eskies to minimise volatile loss.

Based on the above comments the DQIs for representativeness were considered to have been satisfactorily achieved.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

7.2.4 Comparability

Eurofins, the primary laboratory, and Envirolab Services, the secondary laboratory, are NATA accredited for all analytical methods used. The laboratories used similar analytical methods and the analytical data were comparable between laboratories as indicated by the results of duplicate analysis. Where different LORs were adopted by the laboratories, this did not impact upon the usability of the data given that all values were considerably less than the adopted assessment criteria.

The samples collected for assessment purposes are considered comparable as all samples were collected by experienced JBS&G personnel in accordance with standard JBS&G sampling methods.

7.2.5 Completeness

All laboratory and field documentation is complete and correct. Chain of custody documentation is provided with laboratory reports in **Appendix M**. Bore hole logs are presented in **Appendix N**.

The frequency of analysis of all QA/QC samples was considered appropriate and valid.

7.2.6 Sensitivity

The adopted soil analytical methods provided suitable LORs with respect to the adopted site assessment criteria.

7.2.7 QA/QC Conclusions

The field sampling and handling procedures across the Site produced QA/QC results which indicate that soil, groundwater and soil vapour data collected is of an acceptable quality.

The NATA certified laboratory reports indicate that the project laboratories were achieving levels of performance within its recommended control limits during the period when the samples from this program were analysed.

On the basis of the results of the field and laboratory QA/QC program, the soil data is of an acceptable quality upon which to draw conclusions regarding the environmental condition of the Site.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

8. Results

8.1 Soil Observations

Soil sampling was conducted on 6, 7 and 26 May 2017 at the sampling locations shown on **Figure 3A**. Borehole logs are included in **Appendix N**.

As discussed in **Section 2.2**, the majority of the Site is covered by buildings, concrete slabs and asphaltic pavement. Unsealed surfaces were comprised entirely of tree/garden beds with surface gravel cover.

A summary of soil conditions present at the Site is presented as follows. A total of twenty environmental boreholes were advanced for the purposes of soil sampling, as well as nine boreholes advanced for the purposes of geotechnical investigation, via mechanical drill rig. Additionally, eight hand augers were advanced from the ground surface to natural material. Fill material was encountered to depths ranging between 0.2 and 2.0 m below ground surface (m bgs), with natural materials generally being encountered between 0.2 and 0.4 m bgs. Fill material comprised a range of silts and clays which varied in sand content, colours were observed to be primarily brown and grey with some orange/yellow clays also observed. Fill contained varying proportions of gravels, however indicators of anthropogenic materials were observed. Three distinct natural materials were encountered during the investigation: (0.2m – 10.5 m bgs) silty/sandy clay which graded to a higher sand content with depth, (6.1 m – 13.0 m) Nepean River gravels and (>11.7 m) shale bedrock.

No ACM, odours or staining were observed on site surfaces or within the soil profile at any investigation location. No PID readings >1 ppm were observed during field screening for volatiles during soil sampling.

8.2 Soil Contamination Analytical Results

Detailed laboratory reports and chain of custody documentation are provided in **Appendix L**. Summarised soil analytical data for COPCs are presented in **Table A(1)** and **Table A(2)**. Statistical analyses undertaken on the data set are presented in **Appendix P** and are discussed in **Section 8.2.1 to Section 8.2.6**.

8.2.1 Metals

Individual heavy metals concentrations were reported at levels less than the adopted health and ecological based assessment criteria with the exception of the following:

The concentration of lead in sample JHA02 0.3-0.5 (910 mg/kg) exceeded the HIL-C investigation criterion. The concentration of lead reported in JHA02 0.3-0.5 is less than 250 % of the HIL-C site investigation criterion, the standard deviation for the lead concentration dataset for fill samples collected within the 'Proposed Green Spaces' development area was less than half of the HIL-C criterion and the 95 % UCL for the data set was less than the HIL-C criterion. The analysis shows that this exceedances of the HIL-C lead criterion is not statistically significant and thus the concentration is unlikely to pose a risk to future human receptors.

The concentrations of copper in samples JHA02 0.1-0.3 (230 mg/kg) and JHA02 0.3-0.5 (910 mg/kg) exceeded the EIL-B investigation criterion. The concentrations reported in both samples were less than 250 % of the EIL-B site investigation criterion, the standard deviation for the copper concentration dataset for fill samples collected within the 'Proposed Green Spaces' development area was less than half of the EIL-B criterion and the 95 % UCL for the dataset was less than the EIL-B criterion. The analysis shows that this exceedances of the EIL-B copper criterion is not statistically significant and thus the concentration is unlikely to pose a risk to future ecological receptors at the site.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

8.2.2 Polycyclic Aromatic Hydrocarbons

Total PAH, B(a)P and carcinogenic PAHs as B(a)P Toxic Equivalence Quotient (TEQ) values for the analysed samples were generally reported at concentrations less than the adopted site assessment criteria. One notable exception is the concentration of B(a)P at location JHA02 0.3-0.5 (0.9 mg/kg), which exceeded the adopted ESL for the Residential and Public Open Space' land use scenario. Statistical analysis of this exceedance as part of the larger dataset for B(a)P concentrations within fill materials at the Site indicated that this minor exceedance did not comprise a statistically significant exceedance of the Site criterion.

8.2.3 Total Recoverable Hydrocarbons and BTEX Compounds

Concentrations of all TRH were reported below the adopted health and ecological site assessment criteria in all soil samples selected for analysis.

Concentrations of all BTEX were reported below the adopted health and ecological site assessment criteria in all soil samples selected for analysis.

8.2.4 Organochlorine Pesticides and Polychlorinated Biphenyls

Concentrations of OCP compounds were reported below the adopted health and ecological assessment criteria for all soil samples selected for analysis.

Concentrations of total PCB compounds were reported below the adopted health and ecological assessment criteria for all soil samples selected for analysis

8.2.5 Volatile Organic Compounds

Concentrations of all VOCs were reported to be below the adopted health and ecological assessment criteria for all samples selected for analysis.

8.2.6 Asbestos

ACM was not observed during site sampling activities. Asbestos was not detected at concentrations above the assessment criteria in soil samples submitted to the laboratory for analysis although trace asbestos fines were identified in near surface fill at JB11.

8.3 Groundwater Field Observations

A groundwater monitoring event (GME) was conducted on 26 May 2017 by Rohan Hammond, an appropriately trained and experienced environmental consultant. A summary of groundwater conditions encountered during the GME is presented in **Table 8.1, Table 8.2** and **Table 8.3** below. Groundwater monitoring well locations are provided on **Figure 3B**.

Table 8.1 Groundwater Geospatial Characteristics

Well Reference	Easting	Northing	Relative Level (m below PSM03)	Depth to Groundwater (m below top of casing)	Relative Groundwater Level (Below PSM02)
PSM01	286759	6262856	-1.22	6.96	-0.17
PSM02	286646	6262847	-1.06	6.95	0
PSM03	286617	6262929	0	8.05	-0.04

Based on the data presented above, and assuming relatively consistent subsurface conditions are present across the Site, the inferred groundwater flow direction is northwest with a gradient of 0.007 m head per metre in the direction of groundwater flow.

Table 8.2 Groundwater Field Physicochemical Parameters

Well Reference	Dissolved Oxygen (mg/L)	Electrical Conductivity (µS/cm)	pH (units)	Oxidation Reduction Potential (mV)[1]	Temperature (°C)
PSM01	0.31	6770	6.65	-219.0	20.7
PSM02	0.06	1675	7.05	-242.1	20.9
PSM03	0.18	5403	7.11	-131.9	22.0

1. Oxidation Reduction Potential was measured with an Ag/AgCl probe in a solution of 3.5 moles potassium chloride and deionized water.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Table 8.3 Groundwater Field Physicochemical Parameters

Well Reference	Odour	Sheen	Turbidity	Colour
PSM01	Non-odorous	No sheen	Slightly turbid	brown
PSM02	Sulphide odour	Slight oily sheen	Turbid	Dark brown
PSM03	Non-odorous	No sheen	Slightly turbid	Grey

8.4 Groundwater Analytical Results

Detailed laboratory reports and chain of custody documentation are provided in **Appendix L**. Summarised soil analytical data for COPCs are presented in **Table B(1)**. The results are discussed in **Section 8.4.1 to Section 8.4.4**.

8.4.1 Metals

Heavy metals concentrations within the analysed samples were all reported to be below the adopted site assessment criteria.

8.4.2 Total Recoverable Hydrocarbons and BTEX Compounds

TRH compounds were all reported to be at concentrations below the adopted site criteria within the analysed samples. It is noted that concentrations of TRHs significantly above LOR, were detected at PSM02. During the installation of PSM02, a polymer emulsion fluid (EZ-MUD) was utilised to facilitate advancement of the borehole into underlying shale bedrock. TRHs were also detected at PSM01 and PSM03, where installation did not require the use of the Polymer emulsion fluid.

BTEX compounds were generally reported to be at concentrations below the adopted site criteria with the notable exception of toluene. Toluene was detected at a maximum concentration of 0.094 mg/L in the groundwater sample collected at PSM01 (within triplicate sample QC01-W/A), exceeding the health and aesthetic based drinking water criteria.

8.4.3 Polycyclic Aromatic Hydrocarbons

PAH compounds were all reported to be at concentrations below the adopted site criteria within the analysed samples.

8.4.4 Volatile Organic Compounds

VOC compounds were generally reported to be at concentrations below the adopted site criteria within the analysed samples with the exception of the tetrachloroethene, which was detected at a concentration of 0.059 mg/L in the groundwater sample taken from PSM01, exceeding the health based drinking water criterion of 0.05 mg/L.

8.5 Soil Vapour Contamination Analytical Results

Detailed laboratory reports and chain of custody documentation are provided in **Appendix L**. Summarised soil analytical data for COPCs are presented in **Table C(1)**. Results are discussed in **Section 8.4.1** to **Section 8.4.2**.

Concentrations of contaminants within soil vapour were converted from total mass values provided within laboratory documentation via the application of conversion factor as shown below.

$$Concentration\ in\ \frac{mg}{m^3} = \frac{laboratory\ result\ (in\ \mu g) * 1000}{\left(\frac{1000}{6\ L\ sample\ Volume}\right)}$$

8.5.1 Volatile Organic Compounds

Concentrations of VOCs were generally reported to be below the laboratory LOR and the relevant site assessment criteria. The following chlorinated solvents were reported to have been detected within the carbon media at masses indicating exceedances of the site assessment criteria.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Tetrachloroethane (PCE):

- SV04: 10 µg of PCE was detected within the carbon medium indicating a soil vapour concentration of 1.667 mg/m^3;
- SV05: 340 µg of PCE was detected within the carbon medium indicating a soil vapour concentration of 56.67 mg/m^3; and
- SV10: 87 µg of PCE was detected within the carbon medium indicating a soil vapour concentration of 14.5 mg/m^3.

Trichloroethene (TCE);

- SV05: 56 µg of TCE was detected within the carbon medium indicating a soil vapour concentration of 9.33 mg/m^3; and
- SV10: 21 µg of TCE was detected within the carbon medium indicating a soil vapour concentration of 3.5 mg/m^3.

8.5.2 Total Recoverable Hydrocarbons

A single detection of TRH above the laboratory LOR was reported in sample SV04; 11 µg of TRH was detected indicating a soil vapour concentration of 1.833 mg/m^3. This concentration is significantly less than the site assessment criteria.

The balance of the carbon tubes analysed were not identified to contain TRHs above the laboratory LOR.

8.6 Waste Classification

A preliminary waste classification has been undertaken based on the available soil analytical data. Summarised soil analytical data compared against waste classification criteria is provided in **Table D(1)**.

COPCs were generally reported to be at concentrations below the GSW waste classification criteria except for minor metals and PAH exceedances as discussed below. Indicative waste classifications for each of the analysed samples is provided in **Table D(1)**

Heavy Metals Exceedances

Lead

Lead was generally reported to be at concentrations less than the GSW waste classification criterion (100 mg/kg) with the exception of the following samples: JB01 0.05-0.3 (110 mg/kg), JB03 0.05-0.2 (120 mg/kg), JB04 0.4-0.5 (110 mg/kg), JB05 0.1-0.2 (120 mg/kg), JB20 1.7-1.8 (110 mg/kg), JHA02 0.1-0.3 and JHA02 0.3-0.5.

JHA02 0.1-0.3 and JHA02 0.3-0.5 were submitted to a Toxicity Characteristic Leachate Procedure (TCLP) and the leachate fluid was analysed for lead concentrations. Comparison against SCC1 and TCLP1 has indicated results less than the relevant criterion and is therefore classified as GSW.

Nickel

Nickel was generally reported to be at concentrations less than the GSW waste classification criterion (40 mg/kg) with the exception of samples JB12 0.1-0.25 which was reported at a concentration of 75 mg/kg and JHA04 0.2-0.4 with a reported concentration of 58 mg/kg. No leach testing was undertaken for this material and as a result the preliminary classification is RSW.

PAHs

PAHs were all reported to be at concentrations less than the GSW waste classification criteria with the exception of Benzo(a)pyrene in sample JHA02 0.3-0.5, which was reported to be at a

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

concentration of (0.9 mg/kg), exceeding the CT1 criteria. No leach testing was undertaken for this material and as a result the preliminary classification is RSW.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

9. Discussion

Based on the decision-making process for assessing urban redevelopment sites detailed in DEC (2006) and discussed in **Section 6.1.2**, the decisions required to be made are discussed below.

9.1 Contaminant Distribution Summary

Sample results from the soil vapour assessment have indicated that there currently exists a significant chlorinated hydrocarbon impact within the vicinity of the dry cleaner (134-138 Henry Street). The volatile gas impact extends north of the dry cleaner, along the inferred groundwater flow direction, with exceedances of the soil vapour criteria for PCE and TCE identified from gas samples taken at probe locations SV04, SV05 and SV10 (**Figure 3C**). It is noted that the most significant concentrations were detected at location SV05, approximately in line with the inferred groundwater flow direction.

Groundwater and soil concentrations within the vicinity of the dry cleaner have also indicated the presence of chlorinated hydrocarbons, primarily PCE and TCE, albeit at concentrations which were below the adopted site assessment criteria. This has indicated that the impact has migrated laterally and vertically through soil and groundwater at the Site.

PCE and its degradation products, in their pure form, are dense non-aqueous phase liquids (DNAPLs). DNAPLs, once introduced to the environment, tend to sink until confined by a non-permeable barrier present within the local environmental system. It is considered likely that the shale bedrock layer has acted as a confining barrier and that the chlorinated hydrocarbon migration has been halted at approximately 11.5 – 12.0 m bgs, at the interface of the Nepean River gravels and shale bedrock. It is noted that no free phase non-aqueous liquids such as DNAPLs were detected during the GME.

It is noted that no well downstream of the impact was able to be installed due to the presence of building awnings/eaves along the northern boundary of the Site. It is considered possible that additional groundwater impact may be present at the Site that has yet to be identified.

Soil vapour analytical results indicated a minor detection of TRH at location SV04, west of the former service station. Given the lack of significant soil vapour concentrations for TRH within samples taken from the vicinity of the former service station, it is considered unlikely that a significant impact is present as a result of former, undocumented USTs or hydrocarbon spills.

9.2 Potential Risks to Future Onsite Receptors

The presence of chlorinated hydrocarbons in soil vapour represent a potential risk to current and future site users and will require remediation/management for the proposed land uses. The concentration of PCE within soil vapour at location SV05 and the concentration of both PCE and TCE exceeded the adopted HIL-C criteria; these exceedances represent a risk to future onsite receptors.

The concentration of PCE (0.059 mg/L) and toluene (0.094 mg/L) within groundwater sampled from location PSM01 exceeded the adopted drinking water criteria of 0.05 mg/L and 0.025 mg/L respectively. These concentrations represent an unacceptable risk to future onsite receptors.

Concentrations of COPC in all other samples analysed were reported to be at concentrations which did not indicate the presence of statistically significant exceedances of the adopted site assessment criteria.

Given the Site history, the presence of buried anthropogenic materials in the form of building and demolition waste and the identification of trace levels of asbestos within soil at location JB11, it is considered likely that ACM is present at other locations at the Site. Boreholes are limited in their utility for the identification of buried asbestos and ACM, therefore redevelopment of the Site may uncover additional, undocumented asbestos which could potentially represent a risk to human health.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

9.3 Background Soil Contamination

Metals concentrations within natural soil samples analysed were within published background ranges as detailed in **Section 6.2.1**.

9.4 Chemical Mixtures

Soil vapour samples analysed at locations SV04, SV05 and SV10 were reported to have concentrations of both PCE and TCE above the adopted site assessment criteria. The exposure pathway (inhalation) and physiological effects of these contaminants is similar and this may have compounding detrimental effects to the health of future site users.

There were no soil or groundwater samples analysed which indicated the presence of a chemical mixture requiring further consideration.

9.5 Aesthetic Issues

No visible ACM, odours, or stains were observed during the soil or soil vapour investigation.

9.6 Potential Migration of Contaminants

Based on the presence of significant chlorinated hydrocarbon concentrations in soil, groundwater and soil vapour there is potential that contaminant migration (particularly PCE and TCE in groundwater) from the Site is currently occurring. Primary migration is considered likely to be in the approximate direction of the groundwater flow, as indicated by the soil vapour results.

The lack of significant contaminant concentrations in any of the remaining soil, soil vapour or groundwater samples has indicated that the potential for off-site migration of contamination requiring management is low.

The source of elevated TRH concentrations in groundwater across the site is unclear. While the reported concentrations do not pose a risk to future site users additional works are required to identify the source of the contamination and whether there is potential for its migration from the site.

9.7 Site Management Strategy

Based on the proposed land use, the scope of work completed for this assessment and the limitations presented in **Section 11**, there are considered to be unacceptable risks at the Site which require management prior to utilization of the Site for the proposed land uses.

Management of impacts will be required within the vicinity of the dry cleaner and soil sampling location JHA02. A remedial action plan (RAP) will be required to be produced to identify the preferred remedial methodology.

Additionally, site management controls including protocols to manage unexpected finds should be implemented during any ground disturbance works associated with site development.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

10. Conclusions & Recommendations

In accordance with the limitations in **Section 11**, the following conclusions are provided.

- Soil vapour concentrations within the vicinity of the dry cleaner represent a potential risk to current and future site users which will require management prior to utilisation of the Site for the proposed land uses;
- Offsite migration of chlorinated hydrocarbons is potentially occurring, north of the dry cleaner along the inferred groundwater flow direction;
- Lead impacted fill material in the vicinity of JHA02 is required to be managed prior to the utilisation of the site for the proposed land uses;
- Asbestos and ACM may be present within surficial fill materials at the Site which has not been documented as part of this DSI. Boreholes are limited in their utility for the identification of buried asbestos and ACM. During the redevelopment stage of the works, additional asbestos may be identified which could potentially represent a risk to human health and will require management/remediation during redevelopment;
- Contaminants in soils and groundwater were generally not present at concentrations representing statistically significant exceedances of the Site assessment criteria, and therefore with the exception of the aforementioned, do not represent a risk to the current or futures site users;
- No background soil concentrations or aesthetic issues were identified in this assessment;
- The Site is currently unsuitable for the proposed land uses. Subject to the implementation of an RAP which manages the identified impacts, it is considered that the Site can be made suitable for the proposed land uses; and
- The reported concentrations of chlorinated hydrocarbons in groundwater/soil vapour exceed the relevant investigation levels presented in Schedule B1 of the *National Environment Protection (Assessment of Site Contamination) Measure 1999* (NEPC 2013). As a result, there is a potential requirement for the site to be notified to the NSW EPA in accordance with the *Guidelines on the Duty to Report Contamination under the Contaminated Land Management Act 1997* (NSW EPA 2015).

11. Limitations

This report has been prepared for use by the client who has commissioned the works in accordance with the project brief only, and has been based in part on information obtained from the client and other parties.

The advice herein relates only to this project and all results conclusions and recommendations made should be reviewed by a competent person with experience in environmental investigations, before being used for any other purpose.

JBS&G accepts no liability for use or interpretation by any person or body other than the client who commissioned the works. This report should not be reproduced without prior approval by the client, or amended in any way without prior approval by JBS&G, and should not be relied upon by other parties, who should make their own enquires.

Sampling and chemical analysis of environmental media is based on appropriate guidance documents made and approved by the relevant regulatory authorities. Conclusions arising from the review and assessment of environmental data are based on the sampling and analysis considered appropriate based on the regulatory requirements.

Limited sampling and laboratory analyses were undertaken as part of the investigations undertaken, as described herein. Ground conditions between sampling locations and media may vary, and this should be considered when extrapolating between sampling points. Chemical analytes are based on the information detailed in the Site history. Further chemicals or categories of chemicals may exist at the Site, which were not identified in the Site history and which may not be expected at the Site.

Changes to the subsurface conditions may occur subsequent to the investigations described herein, through natural processes or through the intentional or accidental addition of contaminants. The conclusions and recommendations reached in this report are based on the information obtained at the time of the investigations.

This report does not provide a complete assessment of the environmental status of the Site, and it is limited to the scope defined herein. Should information become available regarding conditions at the Site including previously unknown sources of contamination, JBS&G reserves the right to review the report in the context of the additional information.

Data Comments

#1 ESDAT Combined. Some Analytes are missing from this Combined Compound.
#2 ESDAT Combined with Non-Detect Multiplier of 0.5.
#3 Synthetic mineral fibres detected.
#4 No respirable fibres detected
#5 Organic fibres detected.
#6 ESDAT Combined.
#7 Nil
#8 AF:

Document Set ID: 9547379

Data Comments

#1 ESDAT Combined. Some Analytes are missing from this Combined Compound.
#2 ESDAT Combined with Non-Detect Multiplier of 0.5.
#3 Synthetic mineral fibres detected.
#4 No respirable fibres detected
#5 Organic fibres detected.
#6 ESDAT Combined.
#7 Nil
#8 AF:

#1 ESDAT Combined. Some Analytes are missing from this Combined Compound.
#2 ESDAT Combined with Non-Detect Multiplier of 0.5.
#3 Synthetic mineral fibres detected.
#4 No respirable fibres detected
#5 Organic fibres detected.
#6 ESDAT Combined.
#7 Nil
#8 AF:

#1 ESDAT Combined. Some Analytes are missing from this Combined Compound.
#2 ESDAT Combined with Non-Detect Multiplier of 0.5.
#3 Synthetic mineral fibres detected.
#4 No respirable fibres detected
#5 Organic fibres detected.
#6 ESDAT Combined.
#7 Nil
#8 AF:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Data Comments

#1 ESDAT Combined. Some Analytes are missing from this Combined Compound.
#2 ESDAT Combined with Non-Detect Multiplier of 0.5.
#3 Synthetic mineral fibres detected.
#4 No respirable fibres detected
#5 Organic fibres detected.
#6 ESDAT Combined.
#7 Nil
#8 AF:
#9 Assessed against Specific Contaminant Thresholds due to availability of TCLP Data

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

NSW Office of Water
Work Summary

GW111989

Licence: 10BL603225 **Licence Status:** ACTIVE

Authorised Purpose(s): MONITORING BORE
Intended Purpose(s): MONITORING BORE

Work Type: Well
Work Status: Equipped
Construct.Method: Auger - Solid Flight
Owner Type: Private

Commenced Date:
Completion Date: 24/03/2010
Final Depth: 9.00 m
Drilled Depth: 9.00 m

Contractor Name: Numac Drilling Services
Driller: Christopher Mcmullen
Assistant Driller:

Property: WOOLWORTHS PETROL DIVISION CORNER WORTH AND HIGH STREET PENRITH 2750 NSW
Standing Water Level:
GWMA:
Salinity:

List of NSW Contaminated Sites Notified to EPA as of 30 August 2016

Background

A strategy to systematically assess, prioritise and respond to notifications under Section 60 of the *Contaminated Land Management Act 1997* (CLM Act) has been developed by the EPA. This strategy acknowledges the EPA's obligations to make information available to the public under *Government Information (Public Access) Act 2009*.

When a site is notified to the EPA, it may be accompanied by detailed site reports where the owner has been proactive in addressing the contamination and its source. However, often there is minimal information on the nature or extent of the contamination.

For some notifications, the information indicates the contamination is securely immobilised within the site, such as under a building or carpark, and is not currently causing any offsite consequences to the community or environment. Such sites would still need to be cleaned up, but this could be done in conjunction with any subsequent building or redevelopment of the land. These sites may not require intervention under the CLM Act, but could be dealt with through the planning and development consent process.

Where indications are that the nominated site is causing actual harm to the environment or an unacceptable offsite impact (i.e. it is a "significantly contaminated site"), the EPA would apply the regulatory provisions of the CLM Act to have the responsible polluter and/or landowner investigate and remediate the site.

As such, the sites notified to the EPA and presented in the following table are at various stages of the assessment and/or remediation process. Understanding the nature of the underlying contamination, its implications and implementing a remediation program where required, can take a considerable period of time. The tables provide an indication, in relation to each nominated site, as to the management status of that particular site. Further detailed information may be available from the EPA or the responsible landowner.

The following questions and answers may assist those interested in this issue:

Frequently asked questions

What is the difference between the "List of NSW Contaminated Sites Notified to the EPA" and the "Contaminated Land: Record of Notices"?

A site will be on the Contaminated Land: Record of Notices only if the EPA has issued a regulatory notice in relation to the site under the *Contaminated Land Management Act 1997*.

The sites appearing on this "List of NSW contaminated sites notified to the EPA" indicate that the notifiers consider that the sites are contaminated and warrant reporting to the EPA. However, the contamination may or may not be significant enough to warrant regulation by the EPA. The EPA needs to review and, if necessary, obtain more information before it can make a determination as to whether the site warrants regulation.

Why my site appears on the list?

Your site appears on the list because of one or more of the following reasons:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- The site owner and/or the person partly or fully responsible for causing the contamination notified to the EPA about the contamination under Section 60 of the *Contaminated Land Management Act 1997*. In other words, the site owner or the "polluter" believes the site is contaminated.
- The EPA has been notified via other means and is satisfied that the site is or was contaminated.

Does the list contain all contaminated sites in NSW?

No. The list only contains contaminated sites that the EPA is aware of, with regard to its regulatory role under the CLM Act. An absence of a site from the list does not necessarily imply the site is not contaminated.

The EPA relies upon responsible parties to notify contaminated sites.

How are these notified contaminated sites managed by the EPA?

There are different ways that the EPA manages these notified contaminated sites. First, an initial assessment is carried out by the EPA. At the completion of the initial assessment, the EPA may take one or more than one of the following management approaches:

- The contamination warrants the EPA's direct regulatory intervention either under the *Contaminated Land Management Act 1997* or the *Protection of the Environment Operations Act 1997* (POEO Act), or both. Information about current or past regulatory action on this site can be found on EPA website.
- The contamination with respect to the current use or approved use of the site, as defined under the *Contaminated Land Management Act 1997,* is not significant enough that it warrants EPA regulation.
- The contamination does not require EPA regulation and can be managed by a planning approval process.
- The contamination is related to an operational Underground Petroleum Storage System, such as a service station or fuel depot. The contamination may be managed under the POEO Act and the Protection of the Environment Operation (Underground Petroleum Storage Systems) Regulation 2008.
- The contamination is being managed under a specifically tailored program operated by another agency (for example the Department of Industry and Investment's *Derelict Mines Program*).

I am the owner of a site that appears on the list. What should I do?

First of all, you should ensure the current use of the site is compatible with the site contamination. Secondly, if the site is the subject of EPA regulation, make sure you comply with the regulatory requirements, and you have considered your obligations to notify other parties who may be affected.

If you have any concerns, contact us and we may be able to offer you general advice, or direct you to accredited professionals who can assist with specific issues.

I am a prospective buyer of a site that appears on the list. What should I do?

You should seek advice from the vendor to put the contamination issue into perspective. You may need to seek independent expert advice.

The information provided in the list is meant to be indicative only, and a starting point for your own assessment. Site contamination as a legacy of past site uses is not uncommon,

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

particularly in an urbanised environment. If the contamination on a site is properly remediated or managed, it may not materially impact upon the intended future use of the site. However, each site needs to be considered in context.

List of NSW Contaminated Sites Notified to the EPA

Disclaimer

The EPA has taken all reasonable care to ensure that the information in the list of contaminated sites notified to the EPA (the list) is complete and correct. The EPA does not, however, warrant or represent that the list is free from errors or omissions or that it is exhaustive.

The EPA may, without notice, change any or all of the information in the list at any time.

You should obtain independent advice before you make any decision based on the information in the list.

The list is made available on the understanding that the EPA, its servants and agents, to the extent permitted by law, accept no responsibility for any damage, cost, loss or expense incurred by you as a result of:

1. any information in the list; or
2. any error, omission or misrepresentation in the list; or
3. any malfunction or failure to function of the list;
4. without limiting (2) or (3) above, any delay, failure or error in recording, displaying or updating information.

Site Status	Explanation
Under assessment	The contamination is being assessed by the EPA to determine whether regulation is required. The EPA may require further information to complete the assessment. For example, the completion of management actions regulated under the planning process or *Protection of the Environment Operations Act 1997*. Alternatively, the EPA may require information via a notice issued under s77 of the *Contaminated Land Management Act 1997* or issue a Preliminary Investigation Order.
Regulation under CLM Act not required	The EPA has completed an assessment of the contamination and decided that regulation under the *Contaminated Land Management Act 1997* is not required.
Regulation being finalised	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the *Contaminated Land Management Act 1997*. A regulatory approach is being finalised.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Contamination currently regulated under CLM Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the *Contaminated Land Management Act 1997* (CLM Act). Management of the contamination is regulated by the EPA under the CLM Act. Regulatory notices are available on the EPA's Contaminated Land Public Record.
Contamination currently regulated under POEO Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. Management of the contamination is regulated under the *Protection of the Environment Operations Act 1997* (POEO Act). The EPA's regulatory actions under the POEO Act are available on the POEO public register.
Contamination being managed via the planning process (EP&A Act)	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. The contamination of this site is managed by the consent authority under the *Environmental Planning and Assessment Act 1979* (EP&A Act) planning approval process, with EPA involvement as necessary to ensure significant contamination is adequately addressed. The consent authority is typically a local council or the Department of Planning and Environment.
Contamination formerly regulated under the CLM Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation under the *Contaminated Land Management Act 1997* (CLM Act). The contamination was addressed under the CLM Act.
Contamination formerly regulated under the POEO Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed under the *Protection of the Environment Operations Act 1997* (POEO Act).
Contamination was addressed via the planning process (EP&A Act)	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed by the appropriate consent authority via the planning process under the *Environmental Planning and Assessment Act 1979* (EP&A Act).
Ongoing maintenance required to manage residual contamination (CLM Act)	The EPA has determined that ongoing maintenance, under the *Contaminated Land Management Act 1997* (CLM Act), is required to manage the residual contamination. Regulatory notices under the CLM Act are available on the EPA's Contaminated Land Public Record.

DESCRIPTION OF LAND

County: CUMBERLAND **Parish: CASTLEREAGH**

Location: 118-120 Henry Street PENRITH NSW 2750
Land Description: Lot 1 DP 113118

- PART 1 PRESCRIBED MATTERS –

In accordance with the provisions of Section 149(2) of the Act the following information is furnished in respect of the abovementioned land:

1 *NAMES OF RELEVANT PLANNING INSTRUMENTS AND DCPs*

1(1) The name of each environmental planning instrument that applies to the carrying out of development on the land:

Penrith Local Environmental Plan 2010, published 22nd September 2010, as amended, applies to the land.

Sydney Regional Environmental Plan No.9 - Extractive Industry (No.2), gazetted 15 September 1995, as amended, applies to the local government area of Penrith.

Sydney Regional Environmental Plan No. 20 - Hawkesbury-Nepean River (No. 2 - 1997), gazetted 7 November 1997, as amended, applies to the local government area of Penrith (except land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies).

The following State environmental planning policies apply to the land (subject to the exclusions noted below):

State Environmental Planning Policy No.1 - Development Standards. (Note: This policy does not apply to the land to which Penrith Local Environmental Plan 2010 or State Environmental Planning Policy (Western Sydney Employment Area) 2009 apply.)

State Environmental Planning Policy No.19 - Bushland in Urban Areas. (Note: This policy does not apply to certain land referred to in the National Parks and Wildlife Act 1974 and the Forestry Act 1916.)

State Environmental Planning Policy No.21 - Caravan Parks.

State Environmental Planning Policy No.30 - Intensive Agriculture.

Document Set ID: 9547379

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

State Environmental Planning Policy No.32 - Urban Consolidation (Redevelopment of Urban Land). (Note: This policy does not apply to land identified as coastal protection, environmental protection, escarpment, floodway, natural hazard, non-urban, rural, rural residential, water catchment or wetland.)
State Environmental Planning Policy No.33 - Hazardous and Offensive Development.
State Environmental Planning Policy No.50 - Canal Estate Development. (Note: This policy does not apply to the land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies.
State Environmental Planning Policy No.55 - Remediation of Land.
State Environmental Planning Policy No.62 - Sustainable Aquaculture.
State Environmental Planning Policy No.64 - Advertising and Signage.
State Environmental Planning Policy No.65 - Design Quality of Residential Apartment Development.
State Environmental Planning Policy No.70 - Affordable Housing (Revised Schemes).
State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 (Note: This policy applies to land within New South Wales that is land zoned primarily for urban purposes or land that adjoins land zoned primarily for urban purposes, but only as detailed in clause 4 of the policy.)
State Environmental Planning Policy (Building Sustainability Index: BASIX) 2004.
State Environmental Planning Policy (Major Development) 2005.
State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007.
State Environmental Planning Policy (Miscellaneous Consent Provisions) 2007.
State Environmental Planning Policy (Infrastructure) 2007.
State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.
State Environmental Planning Policy (Affordable Rental Housing) 2009.
State Environmental Planning Policy (State and Regional Development) 2011.

1(2) The name of each proposed environmental planning instrument that will apply to the carrying out of development on the land and that is or has been the subject of community consultation or on public exhibition under the Act:

The Planning Proposal for Penrith City Park seeks to amend Penrith Local Environmental Plan 2010 to rezone certain land in Station Street and Henry Street to B4 Mixed Use to expand the range of land uses within the vicinity of the future Penrith City Park. See www.penrithcity.nsw.gov.au <http://www.penrithcity.nsw.gov.au> for more information.

Draft State Environmental Planning Policy (Infrastructure) Amendment (Shooting Ranges) 2013 applies to the land.

1(3) The name of each development control plan that applies to the carrying out of development on the land:

Penrith Development Control Plan 2014 applies to the land.

2 *ZONING AND LAND USE UNDER RELEVANT LEPs*

For each environmental planning instrument or proposed instrument referred to in clause 1 (other than a SEPP or proposed SEPP) that includes the land in any zone (however described):

2(a)-(d) the identity of the zone; the purposes that may be carried out without development consent; the purposes that may not be carried out except with development consent; and the purposes that are prohibited within the zone. Any zone(s) applying to the land is/are listed below and/or in annexures.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

(Note: If no zoning appears in this section see section 1(1) for zoning and land use details (under the Sydney Regional Environmental Plan or State Environmental Planning Policy that zones this property).)

Zone B3 Commercial Core
(Penrith Local Environmental Plan 2010)

1 Objectives of zone

- To provide a wide range of retail, business, office, entertainment, community and other suitable land uses that serve the needs of the local and wider community.
- To encourage appropriate employment opportunities in accessible locations.
- To maximise public transport patronage and encourage walking and cycling.
- To strengthen the role of Penrith City Centre as the business, retail and cultural centre for the region.

2 Permitted without consent

Nil

3 Permitted with consent

Amusement centres; Car parks; Child care centres; Commercial premises; Community facilities; Educational establishments; Entertainment facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Function centres; Helipads; Hotel or motel accommodation; Information and education facilities; Medical centres; Mortuaries; Passenger transport facilities; Places of public worship; Recreation areas; Recreation facilities (indoor); Registered clubs; Respite day care centres; Restricted premises; Roads: Sex services premises; Signage; Tourist and visitor accommodation; Veterinary hospitals

4 Prohibited

Bed and breakfast accommodation; Farm stay accommodation; Any other development not specified in item 2 or 3

Flood planning

All or part of the subject land is identified in Penrith Local Environmental Plan 2010 (PLEP 2010) Clause 7.2 Flood Planning. Development consent is required for any development on land to which Clause 7.2 of PLEP 2010 applies.

Additional information relating to Penrith Local Environmental Plan 2010

Note 1: Under the terms of Clause 2.4 of Penrith Local Environmental Plan 2010 development may be carried out on unzoned land only with development consent.

Note 2: Under the terms of Clause 2.6 of Penrith Local Environmental Plan 2010 land may be subdivided but only with development consent, except for the exclusions detailed in the clause.

Note 3: Under the terms of Clause 2.7 of Penrith Local Environmental Plan 2010 the demolition of a building or work may be carried out only with development consent.

Note 4: A temporary use may be permitted with development consent subject to the requirements of Clause 2.8 of Penrith Local Environmental Plan 2010.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PENRITH CITY COUNCIL

Civic Centre
601 High Street, Penrith

PO Box 60 Penrith NSW 2751

Telephone: 02 4732 7777
Facsimile: 02 4732 7958

Email: pencit@penrithcity.nsw.gov.au

Note 5: Under the terms of Clause 4.1A of Penrith Local Environmental Plan 2010, despite any other provision of this plan, development consent must not be granted for dual occupancy on an internal lot in Zone R2 Low Density Residential.

Note 6: Under the terms of Clause 5.1 of Penrith Local Environmental Plan 2010 development on land acquired by an authority of the State under the owner-initiated acquisition provisions may, before it is used for the purpose for which it is reserved, be carried out, with development consent, for any purpose.

Note 7: Under the terms of Clause 5.3 of Penrith Local Environmental Plan 2010 development consent may be granted to development of certain land for any purpose that may be carried out in an adjoining zone.

Note 8: Under the terms of Clause 5.9 of Penrith Local Environmental Plan 2010 trees or other vegetation subject to relevant sections of Penrith Development Control Plan 2014 must not be ringbarked, cut down, topped, lopped, removed, injured or wilfully destroyed without the authority conferred by a development consent or a Council permit.

Note 9: Under the terms of Clause 5.9AA of Penrith Local Environmental Plan 2010 (PLEP 2010) any tree or other vegetation that is not of a species or kind prescribed for the purposes of Clause 5.9 of PLEP 2010 by Penrith Development Control Plan 2014 may be ringbarked, cut down, topped, lopped, removed, injured or destroyed without development consent.

Note 10: Clause 5.10 of Penrith Local Environmental Plan 2010 details when development consent is required/not required in relation to heritage conservation.

Note 11: Under the terms of Clause 5.11 of Penrith Local Environmental Plan 2010 bush fire hazard reduction work authorised by the *Rural Fires Act 1997* may be carried out on any land without development consent.

Note 12: Under the terms of Clause 7.1 of Penrith Local Environmental Plan 2010 (PLEP 2010) development consent is required for earthworks unless the work is exempt development under PLEP 2010 or another applicable environmental planning instrument, or the work is ancillary to other development for which development consent has been given.

Note 13: Sex services premises and restricted premises may only be permitted subject to the requirements of Clause 7.23 of Penrith Local Environmental Plan 2010.

Under the provisions of the Planning Proposal for the Penrith City Park, the land is affected by the following draft zone:

Zone B4 Mixed Use

1 Objectives of zone

- To provide a mixture of compatible land uses.
- To integrate suitable business, office, residential, retail and other development in accessible locations so as to maximise public transport patronage and encourage walking and cycling.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- To minimise conflict between land uses within the zone and land uses within adjoining zones.
- To create opportunities to improve public amenity.
- To provide a wide range of retail, business, office, residential, community and other suitable land uses.

2 Permitted without consent

Home occupations

3 Permitted with consent

Amusement centres; Boarding houses; Car parks; Child care centres; Commercial premises; Community facilities; Educational establishments; Entertainment facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Function centres; Home-based child care; Home businesses; Hostels; Hotel or motel accommodation; Information and education facilities; Medical centres; Mortuaries; Multi dwelling housing; Passenger transport facilities; Places of public worship; Public administration buildings; Recreation areas; Recreation facilities (indoor); Recreation facilities (outdoor); Registered clubs; Residential accommodation; Residential flat buildings; Respite day care centres; Restricted premises; Roads; Seniors housing; Serviced apartments; Sex services premises; Shop top housing; Signage; Veterinary hospitals.

4 Prohibited

Rural workers' dwellings; Any development not specified in item 2 or 3

2(e) whether any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed:

(Information is provided in this section only if any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed.)

2(f) whether the land includes or comprises critical habitat:

(Information is provided in this section only if the land includes or comprises critical habitat.)

2(g) whether the land is in a conservation area (however described):

(Information is provided in this section only if the land is in a conservation area (however described).)

2(h) whether an item of environmental heritage (however described) is situated on the land:

(Information is provided in this section only if an item of environmental heritage (however described) is situated on the land.)

2A ZONING AND LAND USE UNDER STATE ENVIRONMENTAL PLANNING POLICY (SYDNEY REGION GROWTH CENTRES) 2006

(Information is provided in this section only if the land is within any zone under State Environmental Planning Policy (Sydney Region Growth Centres) 2006.)

Environmental Planning and Assessment Act, 1979

3 *COMPLYING DEVELOPMENT*

GENERAL HOUSING CODE

(The General Housing Code only applies if the land is within Zones R1, R2, R3, R4 or RU5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the General Housing Code **may** be carried out on the land if the land is within one of the abovementioned zones.

RURAL HOUSING CODE

(The Rural Housing Code only applies if the land is within Zones RU1, RU2, RU3, RU4, RU6 or R5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the Rural Housing Code **may** be carried out on the land if the land is within one of the abovementioned zones.

HOUSING ALTERATIONS CODE

Complying development under the Housing Alterations Code **may** be carried out on the land.

GENERAL DEVELOPMENT CODE

Complying development under the General Development Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL ALTERATIONS CODE

Complying development under the Commercial and Industrial Alterations Code **may** be carried out on the land.

SUBDIVISIONS CODE

Complying development under the Subdivisions Code **may** be carried out on the land.

DEMOLITION CODE

Complying development under the Demolition Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL (NEW BUILDINGS AND ADDITIONS) CODE

(The Commercial and Industrial (New Buildings and Additions) Code only applies if the land is within Zones B1, B2, B3, B4, B5, B6, B7, B8, IN1, IN2, IN3, IN4 or SP3 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the Commercial and Industrial (New Buildings and Alterations) Code **may** be carried out on the land if the land is within one of the abovementioned zones.

Environmental Planning and Assessment Act, 1979

FIRE SAFETY CODE

Complying development under the Fire Safety Code **may** be carried out on the land.

(NOTE: (1) Council has relied on Planning and Infrastructure Circulars and Fact Sheets in the preparation of this information. Applicants should seek their own legal advice in relation to this matter with particular reference to State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.

(2) Penrith Local Environmental Plan 2010 (if it applies to the land) contains additional complying development not specified in State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.)

4 COASTAL PROTECTION

The land is not affected by the operation of sections 38 or 39 of the Coastal Protection Act 1979, to the extent that council has been so notified by the Department of Public Works.

5 MINE SUBSIDENCE

The land is not proclaimed to be a mine subsidence district within the meaning of section 15 of the Mine Subsidence Compensation Act 1961.

6 ROAD WIDENING AND ROAD REALIGNMENT

The land is not affected by any road widening or road realignment under:
(a) Division 2 of Part 3 of the Roads Act 1993, or
(b) an environmental planning instrument, or
(c) a resolution of council.

7 COUNCIL AND OTHER PUBLIC AUTHORITY POLICIES ON HAZARD RISK RESTRICTIONS

(a) Council Policies

The land is affected by the Asbestos Policy adopted by Council.
The land is not affected by any other policy adopted by the council that restricts the development of the land because of the likelihood of land slip, bushfire, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

(b) Other Public Authority Policies

The Bush Fire Co-ordinating Committee has adopted a Bush Fire Risk Management Plan that covers the local government area of Penrith City Council, and includes public, private and Commonwealth lands.
The land is not affected by a policy adopted by any other public authority and notified to the council for the express purpose of its adoption by that authority being referred to in planning certificates issued by the council, that restricts the development of the land because of the likelihood of land slip, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

7A FLOOD RELATED DEVELOPMENT CONTROLS INFORMATION

(1) Development on the land or part of the land for the purposes of dwelling houses, dual occupancies, multi dwelling housing or residential flat buildings (not including development for the purposes of group homes or seniors housing) (if such uses are permissible on the land) is subject to flood related development controls.

(2) Development on the land or part of the land for industrial or commercial purposes (if such uses are permissible on the land) is subject to flood related development controls.
Development on the land or part of the land for purposes other than industrial or commercial, or for purposes other than those referred to in (1) above, will be considered on a merits based approach and flood related development controls may apply.

Note: The land is subject to Penrith Development Control Plan 2014 Section C3.5 Flood Planning. On application and payment of the prescribed fee Council may be able to provide in writing a range of advice in regard to the extent of flooding affecting the property.

8 LAND RESERVED FOR ACQUISITION

No environmental planning instrument or proposed environmental planning instrument referred to in clause 1 makes provision in relation to the acquisition of the land by a public authority, as referred to in section 27 of the Act.

9 CONTRIBUTIONS PLANS

The Cultural Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith.

The Penrith City Local Open Space Development Contributions Plan 2007 applies anywhere residential development is permitted within the City of Penrith, excluding industrial areas and the release areas identified in Appendix B of the Plan (Penrith Lakes, Cranebrook, Sydney Regional Environmental Plan No. 30 - St Marys, Waterside, Thornton, the WELL Precinct, Glenmore Park and Erskine Park). See
<http://www.penrithcity.nsw.gov.au/uploadedFiles/Content/Website/Our_Services/Planning_and_Development/Planning__Zoning_Information/Local_Planning_Documents/LocalOpenSpaceDCP(1).pdf>

The Penrith City District Open Space Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith, with the exclusion of industrial lands and the Penrith Lakes development site.

The Penrith City Centre Civic Improvement Plan applies to the land.

9A BIODIVERSITY CERTIFIED LAND

(Information is provided in this section only if the land is biodiversity certified land (within the meaning of Part 7AA of the *Threatened Species Conservation Act 1995*).)

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

10 BIOBANKING AGREEMENTS

(Information is provided in this section only if Council has been notified by the Director-General of the Department of Environment, Climate Change and Water that the land is land to which a biobanking agreement under Part 7A of the *Threatened Species Conservation Act 1995* relates.)

11 BUSH FIRE PRONE LAND

The land is not identified as bush fire prone land according to Council records.

12 PROPERTY VEGETATION PLANS

(Information is provided in this section only if Council has been notified that the land is land to which a property vegetation plan under the Native Vegetation Act 2003 applies.)

13 ORDERS UNDER TREES (DISPUTES BETWEEN NEIGHBOURS) ACT 2006

(Information is provided in this section only if Council has been notified that an order has been made under the Trees (Disputes Between Neighbours) Act 2006 to carry out work in relation to a tree on the land.)

14 DIRECTIONS UNDER PART 3A

(Information is provided in this section only if there is a direction by the Minister in force under section 75P(2)(c1) of the Act that a provision of an environmental planning instrument prohibiting or restricting the carrying out of a project or a stage of a project on the land under Part 4 of the Act does not have effect.)

15 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS AFFECTING SENIORS HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (seniors housing), of which the council is aware, issued under State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 18(2) of State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 have been imposed as a condition of consent to a development application granted after 11 October 2007 in respect of the land.)

16 SITE COMPATIBILITY CERTIFICATES FOR INFRASTRUCTURE

(Information is provided in this section only if there is a valid site compatibility certificate (infrastructure), of which council is aware, in respect of proposed development on the land.)

17 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS FOR AFFORDABLE RENTAL HOUSING

(Information is provided in this section only if:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

(a) there is a current site compatibility certificate (affordable rental housing), of which the council is aware, in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 17(1) or 37(1) of State Environmental Planning Policy (Affordable Rental Housing) 2009 have been imposed as a condition of consent to a development application in respect of the land.)

18 PAPER SUBDIVISION INFORMATION

(Information is provided in this section only if a development plan adopted by a relevant authority applies to the land or is proposed to be subject to a consent ballot, or a subdivision order applies to the land.)

19 SITE VERIFICATION CERTIFICATES

(Information is provided in this section only if there is a current site verification certificate, of which council is aware, in respect of the land.)

NOTE: The following matters are prescribed by section 59(2) of the Contaminated Land Management Act 1997 as additional matters to be specified in a planning certificate

(a) (Information is provided in this section only if, as at the date of this certificate, the land (or part of the land) is significantly contaminated land within the meaning of the Contaminated Land Management Act 1997.)

(b) (Information is provided in this section only if, as at the date of this certificate, the land is subject to a management order within the meaning of the Contaminated Land Management Act 1997.)

(c) (Information is provided in this section only if, as at the date of this certificate, the land is the subject of an approved voluntary management proposal within the meaning of the Contaminated Land Management Act 1997.)

(d) (Information is provided in this section only if, at the date of this certificate, the land subject to an ongoing maintenance order within the meaning of the Contaminated Land Management Act 1997.)

(e) (Information is provided in this section only if the land is the subject of a site audit statement within the meaning of the Contaminated Land Management Act 1997 – a copy of which has been provided to Council.)

Note: Section 149(5) information for this property may contain additional information regarding contamination issues.

Note: The Environmental Planning and Assessment Amendment Act 1997 commenced operation on the 1 July 1998. As a consequence of this Act the information contained in this certificate needs to be read in conjunction with the provisions of the Environmental Planning and Assessment (Amendment) Regulation 1998, Environmental Planning and Assessment (Further Amendment) Regulation 1998 and Environmental Planning and Assessment (Savings and Transitional) Regulation 1998 and Environmental Planning and Assessment Regulation 2000.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

Information is provided only to the extent that Council has been notified by relevant government departments.

149(5) Certificate
This Certificate is directed to the following relevant matters affecting the land

When information pursuant to section 149(5) is requested the Council is under no obligation to furnish any of the information supplied herein pursuant to that section. Council draws your attention to section 149(6) which states that a council shall not incur any liability in respect of any advice provided in good faith pursuant to sub-section (5). The absence of any reference to any matter affecting the land shall not imply that the land is not affected by any matter not referred to in this certificate.

Note:

- Council's 149(5) information does not include development consent or easement information. Details of development consents may be obtained by making enquiries with Council's Development Services Department pursuant to section 12 of the Local Government Act 1993 or (for development applications lodged after January 2007) by viewing the Online Services area at www.penrithcity.nsw.gov.au . Details of any easements may be obtained from a Title Search at Land and Property Information New South Wales.
- This certificate does not contain information relating to Complying Development Certificates.
- This certificate may not provide full details of development rights over the land.
-

* Threatened Species Conservation Act 1995

When considering any development application Council must have regard to the Threatened Species Conservation Act 1995. Please note that this legislation may have application to any land throughout the city. Interested persons should make their own enquiries in regard to the impact that this legislation could have on this land.

* Preservation of Trees and Vegetation

See Clauses 5.9 and 5.9AA of Penrith Local Environmental Plan 2010 and Chapter C2 of Penrith Development Control Plan 2014 for specific controls relating to the preservation of trees and vegetation.

* Development Control Plan General Information

Penrith Development Control Plan 2014 which applies to the land, sets out requirements for a range of issues that apply across the Penrith Local Government Area, including:

- Site Planning and Design Principles
- Vegetation Management
- Water Management
- Land Management
- Waste Management
- Landscape Design
- Culture and Heritage
- Public Domain
- Advertising and Signage
- Transport, Access and Parking
- Subdivision
- Noise and Vibration, and
- Infrastructure and Services.

The Development Control Plan also specifies requirements relating to various types of land uses including:

- Rural Land Uses
- Residential Development
- Commercial and Retail Development, and
- Industrial Development

as well as for a number of specific activities, including child care centres; health consulting rooms; educational establishments; parent friendly amenities; places of public worship; vehicle repair stations; cemeteries, crematoria and funeral homes; extractive industries; and telecommunication facilities.
The Development Control Plan also details requirements relating to key precincts within the Penrith Local Government Area, including:

- Caddens
- Claremont Meadows Stage 2
- Cranebrook
- Emu Heights
- Emu Plains
- Erskine Business Park
- Glenmore Park
- Kingswood
- Mulgoa Valley
- Orchard Hills
- Penrith
- Penrith Health and Education Precinct
- Riverlink Precinct
- St Clair,
- St Marys / St Marys North, and
- Sydney Science Park.

Penrith Development Control Plan 2014 may be accessed at https://www.penrithcity.nsw.gov.au/Building-and-Development/Planning-and-Zoning/Planning-Controls/Development-Control-Plans/

* Penrith City Centre Controls

See Part 8 of Penrith Local Environmental Plan 2010 and Chapter E11 of Penrith Development Control Plan 2014 for specific controls relating to Penrith City Centre (which includes the subject property).

* Active Street Frontage

The land is identified as an "Active Street Frontage" on the Penrith Local Environmental Plan 2010 (PLEP 2010) Active Street Frontages Map. See Clause 7.8 of PLEP 2010 for details.

DESCRIPTION OF LAND

County: CUMBERLAND **Parish: CASTLEREAGH**

Location: 146 Henry Street PENRITH NSW 2750
Land Description: Lot 3 DP 1200790

- PART 1 PRESCRIBED MATTERS –

In accordance with the provisions of Section 149(2) of the Act the following information is furnished in respect of the abovementioned land:

1 *NAMES OF RELEVANT PLANNING INSTRUMENTS AND DCPs*

1(1) The name of each environmental planning instrument that applies to the carrying out of development on the land:

Penrith Local Environmental Plan 2010, published 22nd September 2010, as amended, applies to the land.

Sydney Regional Environmental Plan No.9 - Extractive Industry (No.2), gazetted 15 September 1995, as amended, applies to the local government area of Penrith.

Sydney Regional Environmental Plan No. 20 - Hawkesbury-Nepean River (No. 2 - 1997), gazetted 7 November 1997, as amended, applies to the local government area of Penrith (except land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies).

The following State environmental planning policies apply to the land (subject to the exclusions noted below):

State Environmental Planning Policy No.1 - Development Standards. (Note: This policy does not apply to the land to which Penrith Local Environmental Plan 2010 or State Environmental Planning Policy (Western Sydney Employment Area) 2009 apply.)

State Environmental Planning Policy No.19 - Bushland in Urban Areas. (Note: This policy does not apply to certain land referred to in the National Parks and Wildlife Act 1974 and the Forestry Act 1916.)

State Environmental Planning Policy No.21 - Caravan Parks.

State Environmental Planning Policy No.30 - Intensive Agriculture.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

State Environmental Planning Policy No.32 - Urban Consolidation (Redevelopment of Urban Land). (Note: This policy does not apply to land identified as coastal protection, environmental protection, escarpment, floodway, natural hazard, non-urban, rural, rural residential, water catchment or wetland.)
State Environmental Planning Policy No.33 - Hazardous and Offensive Development.
State Environmental Planning Policy No.50 - Canal Estate Development. (Note: This policy does not apply to the land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies.
State Environmental Planning Policy No.55 - Remediation of Land.
State Environmental Planning Policy No.62 - Sustainable Aquaculture.
State Environmental Planning Policy No.64 - Advertising and Signage.
State Environmental Planning Policy No.65 - Design Quality of Residential Apartment Development.
State Environmental Planning Policy No.70 - Affordable Housing (Revised Schemes).
State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 (Note: This policy applies to land within New South Wales that is land zoned primarily for urban purposes or land that adjoins land zoned primarily for urban purposes, but only as detailed in clause 4 of the policy.)
State Environmental Planning Policy (Building Sustainability Index: BASIX) 2004.
State Environmental Planning Policy (Major Development) 2005.
State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007.
State Environmental Planning Policy (Miscellaneous Consent Provisions) 2007.
State Environmental Planning Policy (Infrastructure) 2007.
State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.
State Environmental Planning Policy (Affordable Rental Housing) 2009.
State Environmental Planning Policy (State and Regional Development) 2011.

1(2) The name of each proposed environmental planning instrument that will apply to the carrying out of development on the land and that is or has been the subject of community consultation or on public exhibition under the Act:

The Planning Proposal for Penrith City Park seeks to amend Penrith Local Environmental Plan 2010 to rezone certain land in Station Street and Henry Street to B4 Mixed Use to expand the range of land uses within the vicinity of the future Penrith City Park. See www.penrithcity.nsw.gov.au <http://www.penrithcity.nsw.gov.au> for more information.

Draft State Environmental Planning Policy (Infrastructure) Amendment (Shooting Ranges) 2013 applies to the land.

1(3) The name of each development control plan that applies to the carrying out of development on the land:

Penrith Development Control Plan 2014 applies to the land.

2 *ZONING AND LAND USE UNDER RELEVANT LEPs*

For each environmental planning instrument or proposed instrument referred to in clause 1 (other than a SEPP or proposed SEPP) that includes the land in any zone (however described):

2(a)-(d) the identity of the zone; the purposes that may be carried out without development consent; the purposes that may not be carried out except with development consent; and the purposes that are prohibited within the zone. Any zone(s) applying to the land is/are listed below and/or in annexures.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

(Note: If no zoning appears in this section see section 1(1) for zoning and land use details (under the Sydney Regional Environmental Plan or State Environmental Planning Policy that zones this property).)

Zone RE1 Public Recreation

(Penrith Local Environmental Plan 2010)

1 Objectives of zone

- To enable land to be used for public open space or recreational purposes.
- To provide a range of recreational settings and activities and compatible land uses.
- To protect and enhance the natural environment for recreational purposes.
- To ensure that development is secondary and complementary to the use of land as public open space, and enhances public use, and access to, the open space.
- To provide land for the development of services and facilities by public authorities for the benefit of the community.

2 Permitted without consent

Nil

3 Permitted with consent

Boat launching ramps; Boat sheds; Building identification signs; Car parks; Business identification signs; Charter and tourism boating facilities; Child care centres; Community facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Function centres; Information and education facilities; Jetties; Kiosks; Markets; Moorings; Public administration buildings; Recreation areas; Recreation facilities (indoor); Recreation facilities (outdoor); Respite day care centres; Restaurants of cafes; Roads; Water recreation structures; Water storage facilities

4 Prohibited

Any other development not specified in item 2 or 3

Flood planning

All or part of the subject land is identified in Penrith Local Environmental Plan 2010 (PLEP 2010) Clause 7.2 Flood Planning. Development consent is required for any development on land to which Clause 7.2 of PLEP 2010 applies.

Additional information relating to Penrith Local Environmental Plan 2010

Note 1: Under the terms of Clause 2.4 of Penrith Local Environmental Plan 2010 development may be carried out on unzoned land only with development consent.

Note 2: Under the terms of Clause 2.6 of Penrith Local Environmental Plan 2010 land may be subdivided but only with development consent, except for the exclusions detailed in the clause.

Note 3: Under the terms of Clause 2.7 of Penrith Local Environmental Plan 2010 the demolition of a building or work may be carried out only with development consent.

Note 4: A temporary use may be permitted with development consent subject to the requirements of Clause 2.8 of Penrith Local Environmental Plan 2010.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

Note 5: Under the terms of Clause 4.1A of Penrith Local Environmental Plan 2010, despite any other provision of this plan, development consent must not be granted for dual occupancy on an internal lot in Zone R2 Low Density Residential.

Note 6: Under the terms of Clause 5.1 of Penrith Local Environmental Plan 2010 development on land acquired by an authority of the State under the owner-initiated acquisition provisions may, before it is used for the purpose for which it is reserved, be carried out, with development consent, for any purpose.

Note 7: Under the terms of Clause 5.3 of Penrith Local Environmental Plan 2010 development consent may be granted to development of certain land for any purpose that may be carried out in an adjoining zone.

Note 8: Under the terms of Clause 5.9 of Penrith Local Environmental Plan 2010 trees or other vegetation subject to relevant sections of Penrith Development Control Plan 2014 must not be ringbarked, cut down, topped, lopped, removed, injured or wilfully destroyed without the authority conferred by a development consent or a Council permit.

Note 9: Under the terms of Clause 5.9AA of Penrith Local Environmental Plan 2010 (PLEP 2010) any tree or other vegetation that is not of a species or kind prescribed for the purposes of Clause 5.9 of PLEP 2010 by Penrith Development Control Plan 2014 may be ringbarked, cut down, topped, lopped, removed, injured or destroyed without development consent.

Note 10: Clause 5.10 of Penrith Local Environmental Plan 2010 details when development consent is required/not required in relation to heritage conservation.

Note 11: Under the terms of Clause 5.11 of Penrith Local Environmental Plan 2010 bush fire hazard reduction work authorised by the *Rural Fires Act 1997* may be carried out on any land without development consent.

Note 12: Under the terms of Clause 7.1 of Penrith Local Environmental Plan 2010 (PLEP 2010) development consent is required for earthworks unless the work is exempt development under PLEP 2010 or another applicable environmental planning instrument, or the work is ancillary to other development for which development consent has been given.

Note 13: Sex services premises and restricted premises may only be permitted subject to the requirements of Clause 7.23 of Penrith Local Environmental Plan 2010.

Under the provisions of the Planning Proposal for the Penrith City Park, the land is affected by the following draft zone:

Zone RE1 Public Recreation

1 Objectives of zone

- To enable land to be used for public open space or recreational purposes.
- To provide a range of recreational settings and activities and compatible land uses.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- To protect and enhance the natural environment for recreational purposes.
- To ensure that development is secondary and complementary to the use of land as public open space, and enhances public use, and access to, the open space.
- To provide land for the development of services and facilities by public authorities for the benefit of the community.

2 Permitted without consent

Nil

3 Permitted with consent

Boat launching ramps; Boat sheds; Building identification signs; Car parks; Business identification signs; Charter and tourism boating facilities; Child care centres; Community facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Function centres; Information and education facilities; Jetties; Kiosks; Markets; Moorings; Public administration buildings; Recreation areas; Recreation facilities (indoor); Recreation facilities (outdoor); Respite day care centres; Restaurants of cafes; Roads; Water recreation structures; Water storage facilities

4 Prohibited

Any other development not specified in item 2 or 3

2(e) whether any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed:

(Information is provided in this section only if any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed.)

2(f) whether the land includes or comprises critical habitat:

(Information is provided in this section only if the land includes or comprises critical habitat.)

2(g) whether the land is in a conservation area (however described):

(Information is provided in this section only if the land is in a conservation area (however described).)

2(h) whether an item of environmental heritage (however described) is situated on the land:

(Information is provided in this section only if an item of environmental heritage (however described) is situated on the land.)

2A ZONING AND LAND USE UNDER STATE ENVIRONMENTAL PLANNING POLICY (SYDNEY REGION GROWTH CENTRES) 2006

(Information is provided in this section only if the land is within any zone under State Environmental Planning Policy (Sydney Region Growth Centres) 2006.)

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

3 *COMPLYING DEVELOPMENT*

GENERAL HOUSING CODE

(The General Housing Code only applies if the land is within Zones R1, R2, R3, R4 or RU5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

- The land is affected by a reservation for a public purpose. If the land is within the relevant zones complying development under the General Housing Code **may not** be carried out on any part of the land that is reserved for a public purpose by an environmental planning instrument. Complying development **may** be carried out on any part of the land that is not reserved for a public purpose by an environmental planning instrument. For the purposes of this section "public purpose" means any land that is zoned either Zone E1, RE1, SP1 or SP2 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument, or land that is subject to acquisition.

RURAL HOUSING CODE

(The Rural Housing Code only applies if the land is within Zones RU1, RU2, RU3, RU4, RU6 or R5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

- The land is affected by a reservation for a public purpose. If the land is within the relevant zones complying development under the Rural Housing Code **may not** be carried out on any part of the land that is reserved for a public purpose by an environmental planning instrument. Complying development **may** be carried out on any part of the land that is not reserved for a public purpose by an environmental planning instrument. For the purposes of this section "public purpose" means any land that is zoned either Zone E1, RE1, SP1 or SP2 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument, or land that is subject to acquisition.

HOUSING ALTERATIONS CODE

Complying development under the Housing Alterations Code **may** be carried out on the land.

GENERAL DEVELOPMENT CODE

Complying development under the General Development Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL ALTERATIONS CODE

Complying development under the Commercial and Industrial Alterations Code **may** be carried out on the land.

SUBDIVISIONS CODE

Complying development under the Subdivisions Code **may** be carried out on the land.

DEMOLITION CODE

Complying development under the Demolition Code **may** be carried out on the land.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

COMMERCIAL AND INDUSTRIAL (NEW BUILDINGS AND ADDITIONS) CODE

(The Commercial and Industrial (New Buildings and Additions) Code only applies if the land is within Zones B1, B2, B3, B4, B5, B6, B7, B8, IN1, IN2, IN3, IN4 or SP3 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

- The land is affected by a reservation for a public purpose. If the land is within the relevant zones complying development under the Commercial and Industrial (New Buildings and Additions) Code **may not** be carried out on any part of the land that is reserved for a public purpose by an environmental planning instrument. Complying development **may** be carried out on any part of the land that is not reserved for a public purpose by an environmental planning instrument. For the purposes of this section "public purpose" means any land that is zoned either Zone E1, RE1, SP1 or SP2 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument, or land that is subject to acquisition.

FIRE SAFETY CODE

Complying development under the Fire Safety Code **may** be carried out on the land.

(NOTE: (1) Council has relied on Planning and Infrastructure Circulars and Fact Sheets in the preparation of this information. Applicants should seek their own legal advice in relation to this matter with particular reference to State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.

(2) Penrith Local Environmental Plan 2010 (if it applies to the land) contains additional complying development not specified in State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.)

4 COASTAL PROTECTION

The land is not affected by the operation of sections 38 or 39 of the Coastal Protection Act 1979, to the extent that council has been so notified by the Department of Public Works.

5 MINE SUBSIDENCE

The land is not proclaimed to be a mine subsidence district within the meaning of section 15 of the Mine Subsidence Compensation Act 1961.

6 ROAD WIDENING AND ROAD REALIGNMENT

The land is not affected by any road widening or road realignment under:
(a) Division 2 of Part 3 of the Roads Act 1993, or
(b) an environmental planning instrument, or
(c) a resolution of council.

7 COUNCIL AND OTHER PUBLIC AUTHORITY POLICIES ON HAZARD RISK RESTRICTIONS

(a) Council Policies

The land is affected by the Asbestos Policy adopted by Council.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

The land is not affected by any other policy adopted by the council that restricts the development of the land because of the likelihood of land slip, bushfire, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

(b) Other Public Authority Policies

The Bush Fire Co-ordinating Committee has adopted a Bush Fire Risk Management Plan that covers the local government area of Penrith City Council, and includes public, private and Commonwealth lands.

The land is not affected by a policy adopted by any other public authority and notified to the council for the express purpose of its adoption by that authority being referred to in planning certificates issued by the council, that restricts the development of the land because of the likelihood of land slip, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

7A FLOOD RELATED DEVELOPMENT CONTROLS INFORMATION

(1) Development on the land or part of the land for the purposes of dwelling houses, dual occupancies, multi dwelling housing or residential flat buildings (not including development for the purposes of group homes or seniors housing) (if such uses are permissible on the land) is subject to flood related development controls.

(2) Development on the land or part of the land for industrial or commercial purposes (if such uses are permissible on the land) is subject to flood related development controls.

Development on the land or part of the land for purposes other than industrial or commercial, or for purposes other than those referred to in (1) above, will be considered on a merits based approach and flood related development controls may apply.

Note: The land is subject to Penrith Development Control Plan 2014 Section C3.5 Flood Planning. On application and payment of the prescribed fee Council may be able to provide in writing a range of advice in regard to the extent of flooding affecting the property.

8 LAND RESERVED FOR ACQUISITION

No environmental planning instrument or proposed environmental planning instrument referred to in clause 1 makes provision in relation to the acquisition of the land by a public authority, as referred to in section 27 of the Act.

9 CONTRIBUTIONS PLANS

The Cultural Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith.

The Penrith City Local Open Space Development Contributions Plan 2007 applies anywhere residential development is permitted within the City of Penrith, excluding industrial areas and the release areas identified in Appendix B of the Plan (Penrith Lakes, Cranebrook, Sydney Regional Environmental Plan No. 30 - St Marys, Waterside, Thornton, the WELL Precinct, Glenmore Park and Erskine Park). See <http://www.penrithcity.nsw.gov.au/uploadedFiles/Content/Website/Our_Services/Planning_and_Development/Planning__Zoning_Information/Local_Planning_Documents/LocalOpenSpaceDCP(1).pdf>

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

The Penrith City District Open Space Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith, with the exclusion of industrial lands and the Penrith Lakes development site.

The Penrith City Centre Civic Improvement Plan applies to the land.

9A BIODIVERSITY CERTIFIED LAND

(Information is provided in this section only if the land is biodiversity certified land (within the meaning of Part 7AA of the *Threatened Species Conservation Act 1995*).)

10 BIOBANKING AGREEMENTS

(Information is provided in this section only if Council has been notified by the Director-General of the Department of Environment, Climate Change and Water that the land is land to which a biobanking agreement under Part 7A of the *Threatened Species Conservation Act 1995* relates.)

11 BUSH FIRE PRONE LAND

The land is not identified as bush fire prone land according to Council records.

12 PROPERTY VEGETATION PLANS

(Information is provided in this section only if Council has been notified that the land is land to which a property vegetation plan under the Native Vegetation Act 2003 applies.)

13 ORDERS UNDER TREES (DISPUTES BETWEEN NEIGHBOURS) ACT 2006

(Information is provided in this section only if Council has been notified that an order has been made under the Trees (Disputes Between Neighbours) Act 2006 to carry out work in relation to a tree on the land.)

14 DIRECTIONS UNDER PART 3A

(Information is provided in this section only if there is a direction by the Minister in force under section 75P(2)(c1) of the Act that a provision of an environmental planning instrument prohibiting or restricting the carrying out of a project or a stage of a project on the land under Part 4 of the Act does not have effect.)

15 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS AFFECTING SENIORS HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (seniors housing), of which the council is aware, issued under State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 18(2) of State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 have been imposed as a condition of consent to a development application granted after 11 October 2007 in respect of the land.)

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

16 SITE COMPATIBILITY CERTIFICATES FOR INFRASTRUCTURE

(Information is provided in this section only if there is a valid site compatibility certificate (infrastructure), of which council is aware, in respect of proposed development on the land.)

17 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS FOR AFFORDABLE RENTAL HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (affordable rental housing), of which the council is aware, in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 17(1) or 37(1) of State Environmental Planning Policy (Affordable Rental Housing) 2009 have been imposed as a condition of consent to a development application in respect of the land.)

18 PAPER SUBDIVISION INFORMATION

(Information is provided in this section only if a development plan adopted by a relevant authority applies to the land or is proposed to be subject to a consent ballot, or a subdivision order applies to the land.)

19 SITE VERIFICATION CERTIFICATES

(Information is provided in this section only if there is a current site verification certificate, of which council is aware, in respect of the land.)

NOTE: The following matters are prescribed by section 59(2) of the Contaminated Land Management Act 1997 as additional matters to be specified in a planning certificate

(a) (Information is provided in this section only if, as at the date of this certificate, the land (or part of the land) is significantly contaminated land within the meaning of the Contaminated Land Management Act 1997.)

(b) (Information is provided in this section only if, as at the date of this certificate, the land is subject to a management order within the meaning of the Contaminated Land Management Act 1997.)

(c) (Information is provided in this section only if, as at the date of this certificate, the land is the subject of an approved voluntary management proposal within the meaning of the Contaminated Land Management Act 1997.)

(d) (Information is provided in this section only if, at the date of this certificate, the land subject to an ongoing maintenance order within the meaning of the Contaminated Land Management Act 1997.)

Email: pencit@penrithcity.nsw.gov.au

(e) (Information is provided in this section only if the land is the subject of a site audit statement within the meaning of the Contaminated Land Management Act 1997 – a copy of which has been provided to Council.)

Note: Section 149(5) information for this property may contain additional information regarding contamination issues.

Note: The Environmental Planning and Assessment Amendment Act 1997 commenced operation on the 1 July 1998. As a consequence of this Act the information contained in this certificate needs to be read in conjunction with the provisions of the Environmental Planning and Assessment (Amendment) Regulation 1998, Environmental Planning and Assessment (Further Amendment) Regulation 1998 and Environmental Planning and Assessment (Savings and Transitional) Regulation 1998 and Environmental Planning and Assessment Regulation 2000.

Information is provided only to the extent that Council has been notified by relevant government departments.

149(5) Certificate
This Certificate is directed to the following relevant matters affecting the land

When information pursuant to section 149(5) is requested the Council is under no obligation to furnish any of the information supplied herein pursuant to that section. Council draws your attention to section 149(6) which states that a council shall not incur any liability in respect of any advice provided in good faith pursuant to sub-section (5). The absence of any reference to any matter affecting the land shall not imply that the land is not affected by any matter not referred to in this certificate.

Note:

- Council's 149(5) information does not include development consent or easement information. Details of development consents may be obtained by making enquiries with Council's Development Services Department pursuant to section 12 of the Local Government Act 1993 or (for development applications lodged after January 2007) by viewing the Online Services area at www.penrithcity.nsw.gov.au . Details of any easements may be obtained from a Title Search at Land and Property Information New South Wales.
- This certificate does not contain information relating to Complying Development Certificates.
- This certificate may not provide full details of development rights over the land.
-

* Threatened Species Conservation Act 1995

When considering any development application Council must have regard to the Threatened Species Conservation Act 1995. Please note that this legislation may have application to any land throughout the city. Interested persons should make their own enquiries in regard to the impact that this legislation could have on this land.

* Preservation of Trees and Vegetation

See Clauses 5.9 and 5.9AA of Penrith Local Environmental Plan 2010 and Chapter C2 of Penrith Development Control Plan 2014 for specific controls relating to the preservation of trees and vegetation.

* Development Control Plan General Information

Penrith Development Control Plan 2014 which applies to the land, sets out requirements for a range of issues that apply across the Penrith Local Government Area, including:

- Site Planning and Design Principles

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Vegetation Management
- Water Management
- Land Management
- Waste Management
- Landscape Design
- Culture and Heritage
- Public Domain
- Advertising and Signage
- Transport, Access and Parking
- Subdivision
- Noise and Vibration, and
- Infrastructure and Services.

The Development Control Plan also specifies requirements relating to various types of land uses including:

- Rural Land Uses
- Residential Development
- Commercial and Retail Development, and
- Industrial Development

as well as for a number of specific activities, including child care centres; health consulting rooms; educational establishments; parent friendly amenities; places of public worship; vehicle repair stations; cemeteries, crematoria and funeral homes; extractive industries; and telecommunication facilities.
The Development Control Plan also details requirements relating to key precincts within the Penrith Local Government Area, including:

- Caddens
- Claremont Meadows Stage 2
- Cranebrook
- Emu Heights
- Emu Plains
- Erskine Business Park
- Glenmore Park
- Kingswood
- Mulgoa Valley
- Orchard Hills
- Penrith
- Penrith Health and Education Precinct
- Riverlink Precinct
- St Clair,
- St Marys / St Marys North, and
- Sydney Science Park.

Penrith Development Control Plan 2014 may be accessed at https://www.penrithcity.nsw.gov.au/Building-and-Development/Planning-and-Zoning/Planning-Controls/Development-Control-Plans/

DESCRIPTION OF LAND

County: CUMBERLAND **Parish: CASTLEREAGH**

Location: 142 Henry Street PENRITH NSW 2750
Land Description: Lot 10 DP 553665

- PART 1 PRESCRIBED MATTERS –

In accordance with the provisions of Section 149(2) of the Act the following information is furnished in respect of the abovementioned land:

1 ***NAMES OF RELEVANT PLANNING INSTRUMENTS AND DCPs***

1(1) The name of each environmental planning instrument that applies to the carrying out of development on the land:

Penrith Local Environmental Plan 2010, published 22nd September 2010, as amended, applies to the land.

Sydney Regional Environmental Plan No.9 - Extractive Industry (No.2), gazetted 15 September 1995, as amended, applies to the local government area of Penrith.

Sydney Regional Environmental Plan No. 20 - Hawkesbury-Nepean River (No. 2 - 1997), gazetted 7 November 1997, as amended, applies to the local government area of Penrith (except land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies).

The following State environmental planning policies apply to the land (subject to the exclusions noted below):
State Environmental Planning Policy No.1 - Development Standards. (Note: This policy does not apply to the land to which Penrith Local Environmental Plan 2010 or State Environmental Planning Policy (Western Sydney Employment Area) 2009 apply.)
State Environmental Planning Policy No.19 - Bushland in Urban Areas. (Note: This policy does not apply to certain land referred to in the National Parks and Wildlife Act 1974 and the Forestry Act 1916.)
State Environmental Planning Policy No.21 - Caravan Parks.
State Environmental Planning Policy No.30 - Intensive Agriculture.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

State Environmental Planning Policy No.32 - Urban Consolidation (Redevelopment of Urban Land). (Note: This policy does not apply to land identified as coastal protection, environmental protection, escarpment, floodway, natural hazard, non-urban, rural, rural residential, water catchment or wetland.)
State Environmental Planning Policy No.33 - Hazardous and Offensive Development.
State Environmental Planning Policy No.50 - Canal Estate Development. (Note: This policy does not apply to the land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies.
State Environmental Planning Policy No.55 - Remediation of Land.
State Environmental Planning Policy No.62 - Sustainable Aquaculture.
State Environmental Planning Policy No.64 - Advertising and Signage.
State Environmental Planning Policy No.65 - Design Quality of Residential Apartment Development.
State Environmental Planning Policy No.70 - Affordable Housing (Revised Schemes).
State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 (Note: This policy applies to land within New South Wales that is land zoned primarily for urban purposes or land that adjoins land zoned primarily for urban purposes, but only as detailed in clause 4 of the policy.)
State Environmental Planning Policy (Building Sustainability Index: BASIX) 2004.
State Environmental Planning Policy (Major Development) 2005.
State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007.
State Environmental Planning Policy (Miscellaneous Consent Provisions) 2007.
State Environmental Planning Policy (Infrastructure) 2007.
State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.
State Environmental Planning Policy (Affordable Rental Housing) 2009.
State Environmental Planning Policy (State and Regional Development) 2011.

1(2) The name of each proposed environmental planning instrument that will apply to the carrying out of development on the land and that is or has been the subject of community consultation or on public exhibition under the Act:

The Planning Proposal for Penrith City Park seeks to amend Penrith Local Environmental Plan 2010 to rezone certain land in Station Street and Henry Street to B4 Mixed Use to expand the range of land uses within the vicinity of the future Penrith City Park. See www.penrithcity.nsw.gov.au <http://www.penrithcity.nsw.gov.au> for more information.

Draft State Environmental Planning Policy (Infrastructure) Amendment (Shooting Ranges) 2013 applies to the land.

1(3) The name of each development control plan that applies to the carrying out of development on the land:

Penrith Development Control Plan 2014 applies to the land.

2 *ZONING AND LAND USE UNDER RELEVANT LEPs*

For each environmental planning instrument or proposed instrument referred to in clause 1 (other than a SEPP or proposed SEPP) that includes the land in any zone (however described):

2(a)-(d) the identity of the zone; the purposes that may be carried out without development consent; the purposes that may not be carried out except with development consent; and the purposes that are prohibited within the zone. Any zone(s) applying to the land is/are listed below and/or in annexures.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

(Note: If no zoning appears in this section see section 1(1) for zoning and land use details (under the Sydney Regional Environmental Plan or State Environmental Planning Policy that zones this property).)

Zone B3 Commercial Core
(Penrith Local Environmental Plan 2010)

1 Objectives of zone

- To provide a wide range of retail, business, office, entertainment, community and other suitable land uses that serve the needs of the local and wider community.
- To encourage appropriate employment opportunities in accessible locations.
- To maximise public transport patronage and encourage walking and cycling.
- To strengthen the role of Penrith City Centre as the business, retail and cultural centre for the region.

2 Permitted without consent

Nil

3 Permitted with consent

Amusement centres; Car parks; Child care centres; Commercial premises; Community facilities; Educational establishments; Entertainment facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Function centres; Helipads; Hotel or motel accommodation; Information and education facilities; Medical centres; Mortuaries; Passenger transport facilities; Places of public worship; Recreation areas; Recreation facilities (indoor); Registered clubs; Respite day care centres; Restricted premises; Roads: Sex services premises; Signage; Tourist and visitor accommodation; Veterinary hospitals

4 Prohibited

Bed and breakfast accommodation; Farm stay accommodation; Any other development not specified in item 2 or 3

Flood planning

All or part of the subject land is identified in Penrith Local Environmental Plan 2010 (PLEP 2010) Clause 7.2 Flood Planning. Development consent is required for any development on land to which Clause 7.2 of PLEP 2010 applies.

Additional information relating to Penrith Local Environmental Plan 2010

Note 1: Under the terms of Clause 2.4 of Penrith Local Environmental Plan 2010 development may be carried out on unzoned land only with development consent.

Note 2: Under the terms of Clause 2.6 of Penrith Local Environmental Plan 2010 land may be subdivided but only with development consent, except for the exclusions detailed in the clause.

Note 3: Under the terms of Clause 2.7 of Penrith Local Environmental Plan 2010 the demolition of a building or work may be carried out only with development consent.

Note 4: A temporary use may be permitted with development consent subject to the requirements of Clause 2.8 of Penrith Local Environmental Plan 2010.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

Note 5: Under the terms of Clause 4.1A of Penrith Local Environmental Plan 2010, despite any other provision of this plan, development consent must not be granted for dual occupancy on an internal lot in Zone R2 Low Density Residential.

Note 6: Under the terms of Clause 5.1 of Penrith Local Environmental Plan 2010 development on land acquired by an authority of the State under the owner-initiated acquisition provisions may, before it is used for the purpose for which it is reserved, be carried out, with development consent, for any purpose.

Note 7: Under the terms of Clause 5.3 of Penrith Local Environmental Plan 2010 development consent may be granted to development of certain land for any purpose that may be carried out in an adjoining zone.

Note 8: Under the terms of Clause 5.9 of Penrith Local Environmental Plan 2010 trees or other vegetation subject to relevant sections of Penrith Development Control Plan 2014 must not be ringbarked, cut down, topped, lopped, removed, injured or wilfully destroyed without the authority conferred by a development consent or a Council permit.

Note 9: Under the terms of Clause 5.9AA of Penrith Local Environmental Plan 2010 (PLEP 2010) any tree or other vegetation that is not of a species or kind prescribed for the purposes of Clause 5.9 of PLEP 2010 by Penrith Development Control Plan 2014 may be ringbarked, cut down, topped, lopped, removed, injured or destroyed without development consent.

Note 10: Clause 5.10 of Penrith Local Environmental Plan 2010 details when development consent is required/not required in relation to heritage conservation.

Note 11: Under the terms of Clause 5.11 of Penrith Local Environmental Plan 2010 bush fire hazard reduction work authorised by the *Rural Fires Act 1997* may be carried out on any land without development consent.

Note 12: Under the terms of Clause 7.1 of Penrith Local Environmental Plan 2010 (PLEP 2010) development consent is required for earthworks unless the work is exempt development under PLEP 2010 or another applicable environmental planning instrument, or the work is ancillary to other development for which development consent has been given.

Note 13: Sex services premises and restricted premises may only be permitted subject to the requirements of Clause 7.23 of Penrith Local Environmental Plan 2010.

Under the provisions of the Planning Proposal for the Penrith City Park, the land is affected by the following draft zone:

Zone B4 Mixed Use

1 Objectives of zone

- To provide a mixture of compatible land uses.
- To integrate suitable business, office, residential, retail and other development in accessible locations so as to maximise public transport patronage and encourage walking and cycling.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- To minimise conflict between land uses within the zone and land uses within adjoining zones.
- To create opportunities to improve public amenity.
- To provide a wide range of retail, business, office, residential, community and other suitable land uses.

2 Permitted without consent

Home occupations

3 Permitted with consent

Amusement centres; Boarding houses; Car parks; Child care centres; Commercial premises; Community facilities; Educational establishments; Entertainment facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Function centres; Home-based child care; Home businesses; Hostels; Hotel or motel accommodation; Information and education facilities; Medical centres; Mortuaries; Multi dwelling housing; Passenger transport facilities; Places of public worship; Public administration buildings; Recreation areas; Recreation facilities (indoor); Recreation facilities (outdoor); Registered clubs; Residential accommodation; Residential flat buildings; Respite day care centres; Restricted premises; Roads; Seniors housing; Serviced apartments; Sex services premises; Shop top housing; Signage; Veterinary hospitals.

4 Prohibited

Rural workers' dwellings; Any development not specified in item 2 or 3

2(e) whether any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed:

(Information is provided in this section only if any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed.)

2(f) whether the land includes or comprises critical habitat:

(Information is provided in this section only if the land includes or comprises critical habitat.)

2(g) whether the land is in a conservation area (however described):

(Information is provided in this section only if the land is in a conservation area (however described).)

2(h) whether an item of environmental heritage (however described) is situated on the land:

(Information is provided in this section only if an item of environmental heritage (however described) is situated on the land.)

2A ZONING AND LAND USE UNDER STATE ENVIRONMENTAL PLANNING POLICY (SYDNEY REGION GROWTH CENTRES) 2006

(Information is provided in this section only if the land is within any zone under State Environmental Planning Policy (Sydney Region Growth Centres) 2006.)

Environmental Planning and Assessment Act, 1979

3 *COMPLYING DEVELOPMENT*

GENERAL HOUSING CODE

(The General Housing Code only applies if the land is within Zones R1, R2, R3, R4 or RU5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the General Housing Code **may** be carried out on the land if the land is within one of the abovementioned zones.

RURAL HOUSING CODE

(The Rural Housing Code only applies if the land is within Zones RU1, RU2, RU3, RU4, RU6 or R5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the Rural Housing Code **may** be carried out on the land if the land is within one of the abovementioned zones.

HOUSING ALTERATIONS CODE

Complying development under the Housing Alterations Code **may** be carried out on the land.

GENERAL DEVELOPMENT CODE

Complying development under the General Development Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL ALTERATIONS CODE

Complying development under the Commercial and Industrial Alterations Code **may** be carried out on the land.

SUBDIVISIONS CODE

Complying development under the Subdivisions Code **may** be carried out on the land.

DEMOLITION CODE

Complying development under the Demolition Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL (NEW BUILDINGS AND ADDITIONS) CODE

(The Commercial and Industrial (New Buildings and Additions) Code only applies if the land is within Zones B1, B2, B3, B4, B5, B6, B7, B8, IN1, IN2, IN3, IN4 or SP3 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the Commercial and Industrial (New Buildings and Alterations) Code **may** be carried out on the land if the land is within one of the abovementioned zones.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

FIRE SAFETY CODE

Complying development under the Fire Safety Code **may** be carried out on the land.

(NOTE: (1) Council has relied on Planning and Infrastructure Circulars and Fact Sheets in the preparation of this information. Applicants should seek their own legal advice in relation to this matter with particular reference to State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.

(2) Penrith Local Environmental Plan 2010 (if it applies to the land) contains additional complying development not specified in State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.)

4 COASTAL PROTECTION

The land is not affected by the operation of sections 38 or 39 of the Coastal Protection Act 1979, to the extent that council has been so notified by the Department of Public Works.

5 MINE SUBSIDENCE

The land is not proclaimed to be a mine subsidence district within the meaning of section 15 of the Mine Subsidence Compensation Act 1961.

6 ROAD WIDENING AND ROAD REALIGNMENT

The land is not affected by any road widening or road realignment under:
(a) Division 2 of Part 3 of the Roads Act 1993, or
(b) an environmental planning instrument, or
(c) a resolution of council.

7 COUNCIL AND OTHER PUBLIC AUTHORITY POLICIES ON HAZARD RISK RESTRICTIONS

(a) Council Policies

The land is affected by the Asbestos Policy adopted by Council.
The land is not affected by any other policy adopted by the council that restricts the development of the land because of the likelihood of land slip, bushfire, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

(b) Other Public Authority Policies

The Bush Fire Co-ordinating Committee has adopted a Bush Fire Risk Management Plan that covers the local government area of Penrith City Council, and includes public, private and Commonwealth lands.
The land is not affected by a policy adopted by any other public authority and notified to the council for the express purpose of its adoption by that authority being referred to in planning certificates issued by the council, that restricts the development of the land because of the likelihood of land slip, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

7A FLOOD RELATED DEVELOPMENT CONTROLS INFORMATION

(1) Development on the land or part of the land for the purposes of dwelling houses, dual occupancies, multi dwelling housing or residential flat buildings (not including development for the purposes of group homes or seniors housing) (if such uses are permissible on the land) is subject to flood related development controls.

(2) Development on the land or part of the land for industrial or commercial purposes (if such uses are permissible on the land) is subject to flood related development controls.
Development on the land or part of the land for purposes other than industrial or commercial, or for purposes other than those referred to in (1) above, will be considered on a merits based approach and flood related development controls may apply.

Note: The land is subject to Penrith Development Control Plan 2014 Section C3.5 Flood Planning. On application and payment of the prescribed fee Council may be able to provide in writing a range of advice in regard to the extent of flooding affecting the property.

8 LAND RESERVED FOR ACQUISITION

No environmental planning instrument or proposed environmental planning instrument referred to in clause 1 makes provision in relation to the acquisition of the land by a public authority, as referred to in section 27 of the Act.

9 CONTRIBUTIONS PLANS

The Cultural Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith.

The Penrith City Local Open Space Development Contributions Plan 2007 applies anywhere residential development is permitted within the City of Penrith, excluding industrial areas and the release areas identified in Appendix B of the Plan (Penrith Lakes, Cranebrook, Sydney Regional Environmental Plan No. 30 - St Marys, Waterside, Thornton, the WELL Precinct, Glenmore Park and Erskine Park). See
<http://www.penrithcity.nsw.gov.au/uploadedFiles/Content/Website/Our_Services/Planning_and_Development/Planning__Zoning_Information/Local_Planning_Documents/LocalOpenSpaceDCP(1).pdf>

The Penrith City District Open Space Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith, with the exclusion of industrial lands and the Penrith Lakes development site.

The Penrith City Centre Civic Improvement Plan applies to the land.

9A BIODIVERSITY CERTIFIED LAND

(Information is provided in this section only if the land is biodiversity certified land (within the meaning of Part 7AA of the *Threatened Species Conservation Act 1995*).)

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Email: pencit@penrithcity.nsw.gov.au

10 BIOBANKING AGREEMENTS

(Information is provided in this section only if Council has been notified by the Director-General of the Department of Environment, Climate Change and Water that the land is land to which a biobanking agreement under Part 7A of the *Threatened Species Conservation Act 1995* relates.)

11 BUSH FIRE PRONE LAND

The land is not identified as bush fire prone land according to Council records.

12 PROPERTY VEGETATION PLANS

(Information is provided in this section only if Council has been notified that the land is land to which a property vegetation plan under the Native Vegetation Act 2003 applies.)

13 ORDERS UNDER TREES (DISPUTES BETWEEN NEIGHBOURS) ACT 2006

(Information is provided in this section only if Council has been notified that an order has been made under the Trees (Disputes Between Neighbours) Act 2006 to carry out work in relation to a tree on the land.)

14 DIRECTIONS UNDER PART 3A

(Information is provided in this section only if there is a direction by the Minister in force under section 75P(2)(c1) of the Act that a provision of an environmental planning instrument prohibiting or restricting the carrying out of a project or a stage of a project on the land under Part 4 of the Act does not have effect.)

15 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS AFFECTING SENIORS HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (seniors housing), of which the council is aware, issued under State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 18(2) of State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 have been imposed as a condition of consent to a development application granted after 11 October 2007 in respect of the land.)

16 SITE COMPATIBILITY CERTIFICATES FOR INFRASTRUCTURE

(Information is provided in this section only if there is a valid site compatibility certificate (infrastructure), of which council is aware, in respect of proposed development on the land.)

17 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS FOR AFFORDABLE RENTAL HOUSING

(Information is provided in this section only if:

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

(a) there is a current site compatibility certificate (affordable rental housing), of which the council is aware, in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 17(1) or 37(1) of State Environmental Planning Policy (Affordable Rental Housing) 2009 have been imposed as a condition of consent to a development application in respect of the land.)

18 PAPER SUBDIVISION INFORMATION

(Information is provided in this section only if a development plan adopted by a relevant authority applies to the land or is proposed to be subject to a consent ballot, or a subdivision order applies to the land.)

19 SITE VERIFICATION CERTIFICATES

(Information is provided in this section only if there is a current site verification certificate, of which council is aware, in respect of the land.)

NOTE: The following matters are prescribed by section 59(2) of the Contaminated Land Management Act 1997 as additional matters to be specified in a planning certificate

(a) (Information is provided in this section only if, as at the date of this certificate, the land (or part of the land) is significantly contaminated land within the meaning of the Contaminated Land Management Act 1997.)

(b) (Information is provided in this section only if, as at the date of this certificate, the land is subject to a management order within the meaning of the Contaminated Land Management Act 1997.)

(c) (Information is provided in this section only if, as at the date of this certificate, the land is the subject of an approved voluntary management proposal within the meaning of the Contaminated Land Management Act 1997.)

(d) (Information is provided in this section only if, at the date of this certificate, the land subject to an ongoing maintenance order within the meaning of the Contaminated Land Management Act 1997.)

(e) (Information is provided in this section only if the land is the subject of a site audit statement within the meaning of the Contaminated Land Management Act 1997 – a copy of which has been provided to Council.)

Note: Section 149(5) information for this property may contain additional information regarding contamination issues.

Note: The Environmental Planning and Assessment Amendment Act 1997 commenced operation on the 1 July 1998. As a consequence of this Act the information contained in this certificate needs to be read in conjunction with the provisions of the Environmental Planning and Assessment (Amendment) Regulation 1998, Environmental Planning and Assessment (Further Amendment) Regulation 1998 and Environmental Planning and Assessment (Savings and Transitional) Regulation 1998 and Environmental Planning and Assessment Regulation 2000.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

Information is provided only to the extent that Council has been notified by relevant government departments.

149(5) Certificate
This Certificate is directed to the following relevant matters affecting the land

When information pursuant to section 149(5) is requested the Council is under no obligation to furnish any of the information supplied herein pursuant to that section. Council draws your attention to section 149(6) which states that a council shall not incur any liability in respect of any advice provided in good faith pursuant to sub-section (5). The absence of any reference to any matter affecting the land shall not imply that the land is not affected by any matter not referred to in this certificate.

Note:

- Council's 149(5) information does not include development consent or easement information. Details of development consents may be obtained by making enquiries with Council's Development Services Department pursuant to section 12 of the Local Government Act 1993 or (for development applications lodged after January 2007) by viewing the Online Services area at www.penrithcity.nsw.gov.au . Details of any easements may be obtained from a Title Search at Land and Property Information New South Wales.
- This certificate does not contain information relating to Complying Development Certificates.
- This certificate may not provide full details of development rights over the land.
-

* Threatened Species Conservation Act 1995

When considering any development application Council must have regard to the Threatened Species Conservation Act 1995. Please note that this legislation may have application to any land throughout the city. Interested persons should make their own enquiries in regard to the impact that this legislation could have on this land.

* Preservation of Trees and Vegetation

See Clauses 5.9 and 5.9AA of Penrith Local Environmental Plan 2010 and Chapter C2 of Penrith Development Control Plan 2014 for specific controls relating to the preservation of trees and vegetation.

* Development Control Plan General Information

Penrith Development Control Plan 2014 which applies to the land, sets out requirements for a range of issues that apply across the Penrith Local Government Area, including:

- Site Planning and Design Principles
- Vegetation Management
- Water Management
- Land Management
- Waste Management
- Landscape Design
- Culture and Heritage
- Public Domain
- Advertising and Signage
- Transport, Access and Parking
- Subdivision
- Noise and Vibration, and
- Infrastructure and Services.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

The Development Control Plan also specifies requirements relating to various types of land uses including:

- Rural Land Uses
- Residential Development
- Commercial and Retail Development, and
- Industrial Development

as well as for a number of specific activities, including child care centres; health consulting rooms; educational establishments; parent friendly amenities; places of public worship; vehicle repair stations; cemeteries, crematoria and funeral homes; extractive industries; and telecommunication facilities.
The Development Control Plan also details requirements relating to key precincts within the Penrith Local Government Area, including:

- Caddens
- Claremont Meadows Stage 2
- Cranebrook
- Emu Heights
- Emu Plains
- Erskine Business Park
- Glenmore Park
- Kingswood
- Mulgoa Valley
- Orchard Hills
- Penrith
- Penrith Health and Education Precinct
- Riverlink Precinct
- St Clair,
- St Marys / St Marys North, and
- Sydney Science Park.

Penrith Development Control Plan 2014 may be accessed at https://www.penrithcity.nsw.gov.au/Building-and-Development/Planning-and-Zoning/Planning-Controls/Development-Control-Plans/

* Penrith City Centre Controls

See Part 8 of Penrith Local Environmental Plan 2010 and Chapter E11 of Penrith Development Control Plan 2014 for specific controls relating to Penrith City Centre (which includes the subject property).

* Active Street Frontage

The land is identified as an "Active Street Frontage" on the Penrith Local Environmental Plan 2010 (PLEP 2010) Active Street Frontages Map. See Clause 7.8 of PLEP 2010 for details.

DESCRIPTION OF LAND

County: CUMBERLAND **Parish: CASTLEREAGH**

Location: 134-138 Henry Street PENRITH NSW 2750
Land Description: Lot 1 DP 164798

- PART 1 PRESCRIBED MATTERS –

In accordance with the provisions of Section 149(2) of the Act the following information is furnished in respect of the abovementioned land:

1 *NAMES OF RELEVANT PLANNING INSTRUMENTS AND DCPs*

1(1) The name of each environmental planning instrument that applies to the carrying out of development on the land:

Penrith Local Environmental Plan 2010, published 22nd September 2010, as amended, applies to the land.

Sydney Regional Environmental Plan No.9 - Extractive Industry (No.2), gazetted 15 September 1995, as amended, applies to the local government area of Penrith.

Sydney Regional Environmental Plan No. 20 - Hawkesbury-Nepean River (No. 2 - 1997), gazetted 7 November 1997, as amended, applies to the local government area of Penrith (except land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies).

The following State environmental planning policies apply to the land (subject to the exclusions noted below):
State Environmental Planning Policy No.1 - Development Standards. (Note: This policy does not apply to the land to which Penrith Local Environmental Plan 2010 or State Environmental Planning Policy (Western Sydney Employment Area) 2009 apply.)
State Environmental Planning Policy No.19 - Bushland in Urban Areas. (Note: This policy does not apply to certain land referred to in the National Parks and Wildlife Act 1974 and the Forestry Act 1916.)
State Environmental Planning Policy No.21 - Caravan Parks.
State Environmental Planning Policy No.30 - Intensive Agriculture.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

State Environmental Planning Policy No.32 - Urban Consolidation (Redevelopment of Urban Land). (Note: This policy does not apply to land identified as coastal protection, environmental protection, escarpment, floodway, natural hazard, non-urban, rural, rural residential, water catchment or wetland.)
State Environmental Planning Policy No.33 - Hazardous and Offensive Development.
State Environmental Planning Policy No.50 - Canal Estate Development. (Note: This policy does not apply to the land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies.
State Environmental Planning Policy No.55 - Remediation of Land.
State Environmental Planning Policy No.62 - Sustainable Aquaculture.
State Environmental Planning Policy No.64 - Advertising and Signage.
State Environmental Planning Policy No.65 - Design Quality of Residential Apartment Development.
State Environmental Planning Policy No.70 - Affordable Housing (Revised Schemes).
State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 (Note: This policy applies to land within New South Wales that is land zoned primarily for urban purposes or land that adjoins land zoned primarily for urban purposes, but only as detailed in clause 4 of the policy.)
State Environmental Planning Policy (Building Sustainability Index: BASIX) 2004.
State Environmental Planning Policy (Major Development) 2005.
State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007.
State Environmental Planning Policy (Miscellaneous Consent Provisions) 2007.
State Environmental Planning Policy (Infrastructure) 2007.
State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.
State Environmental Planning Policy (Affordable Rental Housing) 2009.
State Environmental Planning Policy (State and Regional Development) 2011.

1(2) The name of each proposed environmental planning instrument that will apply to the carrying out of development on the land and that is or has been the subject of community consultation or on public exhibition under the Act:

The Planning Proposal for Penrith City Park seeks to amend Penrith Local Environmental Plan 2010 to rezone certain land in Station Street and Henry Street to B4 Mixed Use to expand the range of land uses within the vicinity of the future Penrith City Park. See www.penrithcity.nsw.gov.au <http://www.penrithcity.nsw.gov.au> for more information.

Draft State Environmental Planning Policy (Infrastructure) Amendment (Shooting Ranges) 2013 applies to the land.

1(3) The name of each development control plan that applies to the carrying out of development on the land:

Penrith Development Control Plan 2014 applies to the land.

2 *ZONING AND LAND USE UNDER RELEVANT LEPs*

For each environmental planning instrument or proposed instrument referred to in clause 1 (other than a SEPP or proposed SEPP) that includes the land in any zone (however described):

2(a)-(d) the identity of the zone; the purposes that may be carried out without development consent; the purposes that may not be carried out except with development consent; and the purposes that are prohibited within the zone. Any zone(s) applying to the land is/are listed below and/or in annexures.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

(Note: If no zoning appears in this section see section 1(1) for zoning and land use details (under the Sydney Regional Environmental Plan or State Environmental Planning Policy that zones this property).)

Zone B3 Commercial Core
(Penrith Local Environmental Plan 2010)

1 Objectives of zone

- To provide a wide range of retail, business, office, entertainment, community and other suitable land uses that serve the needs of the local and wider community.
- To encourage appropriate employment opportunities in accessible locations.
- To maximise public transport patronage and encourage walking and cycling.
- To strengthen the role of Penrith City Centre as the business, retail and cultural centre for the region.

2 Permitted without consent

Nil

3 Permitted with consent

Amusement centres; Car parks; Child care centres; Commercial premises; Community facilities; Educational establishments; Entertainment facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Function centres; Helipads; Hotel or motel accommodation; Information and education facilities; Medical centres; Mortuaries; Passenger transport facilities; Places of public worship; Recreation areas; Recreation facilities (indoor); Registered clubs; Respite day care centres; Restricted premises; Roads: Sex services premises; Signage; Tourist and visitor accommodation; Veterinary hospitals

4 Prohibited

Bed and breakfast accommodation; Farm stay accommodation; Any other development not specified in item 2 or 3

Flood planning

All or part of the subject land is identified in Penrith Local Environmental Plan 2010 (PLEP 2010) Clause 7.2 Flood Planning. Development consent is required for any development on land to which Clause 7.2 of PLEP 2010 applies.

Additional information relating to Penrith Local Environmental Plan 2010

Note 1: Under the terms of Clause 2.4 of Penrith Local Environmental Plan 2010 development may be carried out on unzoned land only with development consent.

Note 2: Under the terms of Clause 2.6 of Penrith Local Environmental Plan 2010 land may be subdivided but only with development consent, except for the exclusions detailed in the clause.

Note 3: Under the terms of Clause 2.7 of Penrith Local Environmental Plan 2010 the demolition of a building or work may be carried out only with development consent.

Note 4: A temporary use may be permitted with development consent subject to the requirements of Clause 2.8 of Penrith Local Environmental Plan 2010.

Email: pencit@penrithcity.nsw.gov.au

Note 5: Under the terms of Clause 4.1A of Penrith Local Environmental Plan 2010, despite any other provision of this plan, development consent must not be granted for dual occupancy on an internal lot in Zone R2 Low Density Residential.

Note 6: Under the terms of Clause 5.1 of Penrith Local Environmental Plan 2010 development on land acquired by an authority of the State under the owner-initiated acquisition provisions may, before it is used for the purpose for which it is reserved, be carried out, with development consent, for any purpose.

Note 7: Under the terms of Clause 5.3 of Penrith Local Environmental Plan 2010 development consent may be granted to development of certain land for any purpose that may be carried out in an adjoining zone.

Note 8: Under the terms of Clause 5.9 of Penrith Local Environmental Plan 2010 trees or other vegetation subject to relevant sections of Penrith Development Control Plan 2014 must not be ringbarked, cut down, topped, lopped, removed, injured or wilfully destroyed without the authority conferred by a development consent or a Council permit.

Note 9: Under the terms of Clause 5.9AA of Penrith Local Environmental Plan 2010 (PLEP 2010) any tree or other vegetation that is not of a species or kind prescribed for the purposes of Clause 5.9 of PLEP 2010 by Penrith Development Control Plan 2014 may be ringbarked, cut down, topped, lopped, removed, injured or destroyed without development consent.

Note 10: Clause 5.10 of Penrith Local Environmental Plan 2010 details when development consent is required/not required in relation to heritage conservation.

Note 11: Under the terms of Clause 5.11 of Penrith Local Environmental Plan 2010 bush fire hazard reduction work authorised by the *Rural Fires Act 1997* may be carried out on any land without development consent.

Note 12: Under the terms of Clause 7.1 of Penrith Local Environmental Plan 2010 (PLEP 2010) development consent is required for earthworks unless the work is exempt development under PLEP 2010 or another applicable environmental planning instrument, or the work is ancillary to other development for which development consent has been given.

Note 13: Sex services premises and restricted premises may only be permitted subject to the requirements of Clause 7.23 of Penrith Local Environmental Plan 2010.

2(e) whether any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed:

(Information is provided in this section only if any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed.)

2(f) whether the land includes or comprises critical habitat:

(Information is provided in this section only if the land includes or comprises critical habitat.)

DEMOLITION CODE

Complying development under the Demolition Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL (NEW BUILDINGS AND ADDITIONS) CODE

(The Commercial and Industrial (New Buildings and Additions) Code only applies if the land is within Zones B1, B2, B3, B4, B5, B6, B7, B8, IN1, IN2, IN3, IN4 or SP3 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the Commercial and Industrial (New Buildings and Alterations) Code **may** be carried out on the land if the land is within one of the abovementioned zones.

FIRE SAFETY CODE

Complying development under the Fire Safety Code **may** be carried out on the land.

(NOTE: (1) Council has relied on Planning and Infrastructure Circulars and Fact Sheets in the preparation of this information. Applicants should seek their own legal advice in relation to this matter with particular reference to State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.

(2) Penrith Local Environmental Plan 2010 (if it applies to the land) contains additional complying development not specified in State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.)

4 COASTAL PROTECTION

The land is not affected by the operation of sections 38 or 39 of the Coastal Protection Act 1979, to the extent that council has been so notified by the Department of Public Works.

5 MINE SUBSIDENCE

The land is not proclaimed to be a mine subsidence district within the meaning of section 15 of the Mine Subsidence Compensation Act 1961.

6 ROAD WIDENING AND ROAD REALIGNMENT

The land is not affected by any road widening or road realignment under:
(a) Division 2 of Part 3 of the Roads Act 1993, or
(b) an environmental planning instrument, or
(c) a resolution of council.

7 COUNCIL AND OTHER PUBLIC AUTHORITY POLICIES ON HAZARD RISK RESTRICTIONS

(a) Council Policies
The land is affected by the Asbestos Policy adopted by Council.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

The land is not affected by any other policy adopted by the council that restricts the development of the land because of the likelihood of land slip, bushfire, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

(b) Other Public Authority Policies

The Bush Fire Co-ordinating Committee has adopted a Bush Fire Risk Management Plan that covers the local government area of Penrith City Council, and includes public, private and Commonwealth lands.

The land is not affected by a policy adopted by any other public authority and notified to the council for the express purpose of its adoption by that authority being referred to in planning certificates issued by the council, that restricts the development of the land because of the likelihood of land slip, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

7A FLOOD RELATED DEVELOPMENT CONTROLS INFORMATION

(1) Development on the land or part of the land for the purposes of dwelling houses, dual occupancies, multi dwelling housing or residential flat buildings (not including development for the purposes of group homes or seniors housing) (if such uses are permissible on the land) is subject to flood related development controls.

(2) Development on the land or part of the land for industrial or commercial purposes (if such uses are permissible on the land) is subject to flood related development controls.

Development on the land or part of the land for purposes other than industrial or commercial, or for purposes other than those referred to in (1) above, will be considered on a merits based approach and flood related development controls may apply.

Note: The land is subject to Penrith Development Control Plan 2014 Section C3.5 Flood Planning. On application and payment of the prescribed fee Council may be able to provide in writing a range of advice in regard to the extent of flooding affecting the property.

8 LAND RESERVED FOR ACQUISITION

No environmental planning instrument or proposed environmental planning instrument referred to in clause 1 makes provision in relation to the acquisition of the land by a public authority, as referred to in section 27 of the Act.

9 CONTRIBUTIONS PLANS

The Cultural Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith.

The Penrith City Local Open Space Development Contributions Plan 2007 applies anywhere residential development is permitted within the City of Penrith, excluding industrial areas and the release areas identified in Appendix B of the Plan (Penrith Lakes, Cranebrook, Sydney Regional Environmental Plan No. 30 - St Marys, Waterside, Thornton, the WELL Precinct, Glenmore Park and Erskine Park). See <http://www.penrithcity.nsw.gov.au/uploadedFiles/Content/Website/Our_Services/Planning_and_Development/Planning__Zoning_Information/Local_Planning_Documents/LocalOpenSpaceDCP(1).pdf>

The Penrith City District Open Space Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith, with the exclusion of industrial lands and the Penrith Lakes development site.

The Penrith City Centre Civic Improvement Plan applies to the land.

9A BIODIVERSITY CERTIFIED LAND

(Information is provided in this section only if the land is biodiversity certified land (within the meaning of Part 7AA of the *Threatened Species Conservation Act 1995*).)

10 BIOBANKING AGREEMENTS

(Information is provided in this section only if Council has been notified by the Director-General of the Department of Environment, Climate Change and Water that the land is land to which a biobanking agreement under Part 7A of the *Threatened Species Conservation Act 1995* relates.)

11 BUSH FIRE PRONE LAND

The land is not identified as bush fire prone land according to Council records.

12 PROPERTY VEGETATION PLANS

(Information is provided in this section only if Council has been notified that the land is land to which a property vegetation plan under the Native Vegetation Act 2003 applies.)

13 ORDERS UNDER TREES (DISPUTES BETWEEN NEIGHBOURS) ACT 2006

(Information is provided in this section only if Council has been notified that an order has been made under the Trees (Disputes Between Neighbours) Act 2006 to carry out work in relation to a tree on the land.)

14 DIRECTIONS UNDER PART 3A

(Information is provided in this section only if there is a direction by the Minister in force under section 75P(2)(c1) of the Act that a provision of an environmental planning instrument prohibiting or restricting the carrying out of a project or a stage of a project on the land under Part 4 of the Act does not have effect.)

15 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS AFFECTING SENIORS HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (seniors housing), of which the council is aware, issued under State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 18(2) of State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 have been imposed as a condition of consent to a development application granted after 11 October 2007 in respect of the land.)

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

16 SITE COMPATIBILITY CERTIFICATES FOR INFRASTRUCTURE

(Information is provided in this section only if there is a valid site compatibility certificate (infrastructure), of which council is aware, in respect of proposed development on the land.)

17 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS FOR AFFORDABLE RENTAL HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (affordable rental housing), of which the council is aware, in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 17(1) or 37(1) of State Environmental Planning Policy (Affordable Rental Housing) 2009 have been imposed as a condition of consent to a development application in respect of the land.)

18 PAPER SUBDIVISION INFORMATION

(Information is provided in this section only if a development plan adopted by a relevant authority applies to the land or is proposed to be subject to a consent ballot, or a subdivision order applies to the land.)

19 SITE VERIFICATION CERTIFICATES

(Information is provided in this section only if there is a current site verification certificate, of which council is aware, in respect of the land.)

NOTE: The following matters are prescribed by section 59(2) of the Contaminated Land Management Act 1997 as additional matters to be specified in a planning certificate

(a) (Information is provided in this section only if, as at the date of this certificate, the land (or part of the land) is significantly contaminated land within the meaning of the Contaminated Land Management Act 1997.)

(b) (Information is provided in this section only if, as at the date of this certificate, the land is subject to a management order within the meaning of the Contaminated Land Management Act 1997.)

(c) (Information is provided in this section only if, as at the date of this certificate, the land is the subject of an approved voluntary management proposal within the meaning of the Contaminated Land Management Act 1997.)

(d) (Information is provided in this section only if, at the date of this certificate, the land subject to an ongoing maintenance order within the meaning of the Contaminated Land Management Act 1997.)

Facsimile: 02 4732 7958

Email: pencit@penrithcity.nsw.gov.au

(e) (Information is provided in this section only if the land is the subject of a site audit statement within the meaning of the Contaminated Land Management Act 1997 – a copy of which has been provided to Council.)

Note: Section 149(5) information for this property may contain additional information regarding contamination issues.

Note: The Environmental Planning and Assessment Amendment Act 1997 commenced operation on the 1 July 1998. As a consequence of this Act the information contained in this certificate needs to be read in conjunction with the provisions of the Environmental Planning and Assessment (Amendment) Regulation 1998, Environmental Planning and Assessment (Further Amendment) Regulation 1998 and Environmental Planning and Assessment (Savings and Transitional) Regulation 1998 and Environmental Planning and Assessment Regulation 2000.

Information is provided only to the extent that Council has been notified by relevant government departments.

149(5) Certificate
This Certificate is directed to the following relevant matters affecting the land

When information pursuant to section 149(5) is requested the Council is under no obligation to furnish any of the information supplied herein pursuant to that section. Council draws your attention to section 149(6) which states that a council shall not incur any liability in respect of any advice provided in good faith pursuant to sub-section (5). The absence of any reference to any matter affecting the land shall not imply that the land is not affected by any matter not referred to in this certificate.

Note:

- Council's 149(5) information does not include development consent or easement information. Details of development consents may be obtained by making enquiries with Council's Development Services Department pursuant to section 12 of the Local Government Act 1993 or (for development applications lodged after January 2007) by viewing the Online Services area at www.penrithcity.nsw.gov.au . Details of any easements may be obtained from a Title Search at Land and Property Information New South Wales.
- This certificate does not contain information relating to Complying Development Certificates.
- This certificate may not provide full details of development rights over the land.

* Threatened Species Conservation Act 1995
When considering any development application Council must have regard to the Threatened Species Conservation Act 1995. Please note that this legislation may have application to any land throughout the city. Interested persons should make their own enquiries in regard to the impact that this legislation could have on this land.

* Preservation of Trees and Vegetation
See Clauses 5.9 and 5.9AA of Penrith Local Environmental Plan 2010 and Chapter C2 of Penrith Development Control Plan 2014 for specific controls relating to the preservation of trees and vegetation.

* Development Control Plan General Information
Penrith Development Control Plan 2014 which applies to the land, sets out requirements for a range of issues that apply across the Penrith Local Government Area, including:

- Site Planning and Design Principles

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Vegetation Management
- Water Management
- Land Management
- Waste Management
- Landscape Design
- Culture and Heritage
- Public Domain
- Advertising and Signage
- Transport, Access and Parking
- Subdivision
- Noise and Vibration, and
- Infrastructure and Services.

The Development Control Plan also specifies requirements relating to various types of land uses including:

- Rural Land Uses
- Residential Development
- Commercial and Retail Development, and
- Industrial Development

as well as for a number of specific activities, including child care centres; health consulting rooms; educational establishments; parent friendly amenities; places of public worship; vehicle repair stations; cemeteries, crematoria and funeral homes; extractive industries; and telecommunication facilities.
The Development Control Plan also details requirements relating to key precincts within the Penrith Local Government Area, including:

- Caddens
- Claremont Meadows Stage 2
- Cranebrook
- Emu Heights
- Emu Plains
- Erskine Business Park
- Glenmore Park
- Kingswood
- Mulgoa Valley
- Orchard Hills
- Penrith
- Penrith Health and Education Precinct
- Riverlink Precinct
- St Clair, and
- St Marys / St Marys North.

Penrith Development Control Plan 2014 may be accessed at https://www.penrithcity.nsw.gov.au/Building-and-Development/Planning-and-Zoning/Planning-Controls/Development-Control-Plans/

DESCRIPTION OF LAND

County: CUMBERLAND **Parish: CASTLEREAGH**

Location: 134-138 Henry Street PENRITH NSW 2750
Land Description: Lot 1 DP 252457

- PART 1 PRESCRIBED MATTERS –

In accordance with the provisions of Section 149(2) of the Act the following information is furnished in respect of the abovementioned land:

1 *NAMES OF RELEVANT PLANNING INSTRUMENTS AND DCPs*

1(1) The name of each environmental planning instrument that applies to the carrying out of development on the land:

Penrith Local Environmental Plan 2010, published 22nd September 2010, as amended, applies to the land.

Sydney Regional Environmental Plan No.9 - Extractive Industry (No.2), gazetted 15 September 1995, as amended, applies to the local government area of Penrith.

Sydney Regional Environmental Plan No. 20 - Hawkesbury-Nepean River (No. 2 - 1997), gazetted 7 November 1997, as amended, applies to the local government area of Penrith (except land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies).

The following State environmental planning policies apply to the land (subject to the exclusions noted below):
State Environmental Planning Policy No.1 - Development Standards. (Note: This policy does not apply to the land to which Penrith Local Environmental Plan 2010 or State Environmental Planning Policy (Western Sydney Employment Area) 2009 apply.)
State Environmental Planning Policy No.19 - Bushland in Urban Areas. (Note: This policy does not apply to certain land referred to in the National Parks and Wildlife Act 1974 and the Forestry Act 1916.)
State Environmental Planning Policy No.21 - Caravan Parks.
State Environmental Planning Policy No.30 - Intensive Agriculture.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

State Environmental Planning Policy No.32 - Urban Consolidation (Redevelopment of Urban Land). (Note: This policy does not apply to land identified as coastal protection, environmental protection, escarpment, floodway, natural hazard, non-urban, rural, rural residential, water catchment or wetland.)
State Environmental Planning Policy No.33 - Hazardous and Offensive Development.
State Environmental Planning Policy No.50 - Canal Estate Development. (Note: This policy does not apply to the land to which State Environmental Planning Policy (Penrith Lakes Scheme) 1989 applies.
State Environmental Planning Policy No.55 - Remediation of Land.
State Environmental Planning Policy No.62 - Sustainable Aquaculture.
State Environmental Planning Policy No.64 - Advertising and Signage.
State Environmental Planning Policy No.65 - Design Quality of Residential Apartment Development.
State Environmental Planning Policy No.70 - Affordable Housing (Revised Schemes).
State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 (Note: This policy applies to land within New South Wales that is land zoned primarily for urban purposes or land that adjoins land zoned primarily for urban purposes, but only as detailed in clause 4 of the policy.)
State Environmental Planning Policy (Building Sustainability Index: BASIX) 2004.
State Environmental Planning Policy (Major Development) 2005.
State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007.
State Environmental Planning Policy (Miscellaneous Consent Provisions) 2007.
State Environmental Planning Policy (Infrastructure) 2007.
State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.
State Environmental Planning Policy (Affordable Rental Housing) 2009.
State Environmental Planning Policy (State and Regional Development) 2011.

1(2) The name of each proposed environmental planning instrument that will apply to the carrying out of development on the land and that is or has been the subject of community consultation or on public exhibition under the Act:

The Planning Proposal for Penrith City Park seeks to amend Penrith Local Environmental Plan 2010 to rezone certain land in Station Street and Henry Street to B4 Mixed Use to expand the range of land uses within the vicinity of the future Penrith City Park. See www.penrithcity.nsw.gov.au <http://www.penrithcity.nsw.gov.au> for more information.

Draft State Environmental Planning Policy (Infrastructure) Amendment (Shooting Ranges) 2013 applies to the land.

1(3) The name of each development control plan that applies to the carrying out of development on the land:

Penrith Development Control Plan 2014 applies to the land.

2 *ZONING AND LAND USE UNDER RELEVANT LEPs*

For each environmental planning instrument or proposed instrument referred to in clause 1 (other than a SEPP or proposed SEPP) that includes the land in any zone (however described):

2(a)-(d) the identity of the zone; the purposes that may be carried out without development consent; the purposes that may not be carried out except with development consent; and the purposes that are prohibited within the zone. Any zone(s) applying to the land is/are listed below and/or in annexures.

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

(Note: If no zoning appears in this section see section 1(1) for zoning and land use details (under the Sydney Regional Environmental Plan or State Environmental Planning Policy that zones this property).)

Zone B3 Commercial Core
(Penrith Local Environmental Plan 2010)

1 Objectives of zone

- To provide a wide range of retail, business, office, entertainment, community and other suitable land uses that serve the needs of the local and wider community.
- To encourage appropriate employment opportunities in accessible locations.
- To maximise public transport patronage and encourage walking and cycling.
- To strengthen the role of Penrith City Centre as the business, retail and cultural centre for the region.

2 Permitted without consent

Nil

3 Permitted with consent

Amusement centres; Car parks; Child care centres; Commercial premises; Community facilities; Educational establishments; Entertainment facilities; Environmental facilities; Environmental protection works; Flood mitigation works; Function centres; Helipads; Hotel or motel accommodation; Information and education facilities; Medical centres; Mortuaries; Passenger transport facilities; Places of public worship; Recreation areas; Recreation facilities (indoor); Registered clubs; Respite day care centres; Restricted premises; Roads: Sex services premises; Signage; Tourist and visitor accommodation; Veterinary hospitals

4 Prohibited

Bed and breakfast accommodation; Farm stay accommodation; Any other development not specified in item 2 or 3

Flood planning

All or part of the subject land is identified in Penrith Local Environmental Plan 2010 (PLEP 2010) Clause 7.2 Flood Planning. Development consent is required for any development on land to which Clause 7.2 of PLEP 2010 applies.

Additional information relating to Penrith Local Environmental Plan 2010

Note 1: Under the terms of Clause 2.4 of Penrith Local Environmental Plan 2010 development may be carried out on unzoned land only with development consent.

Note 2: Under the terms of Clause 2.6 of Penrith Local Environmental Plan 2010 land may be subdivided but only with development consent, except for the exclusions detailed in the clause.

Note 3: Under the terms of Clause 2.7 of Penrith Local Environmental Plan 2010 the demolition of a building or work may be carried out only with development consent.

Note 4: A temporary use may be permitted with development consent subject to the requirements of Clause 2.8 of Penrith Local Environmental Plan 2010.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

Note 5: Under the terms of Clause 4.1A of Penrith Local Environmental Plan 2010, despite any other provision of this plan, development consent must not be granted for dual occupancy on an internal lot in Zone R2 Low Density Residential.

Note 6: Under the terms of Clause 5.1 of Penrith Local Environmental Plan 2010 development on land acquired by an authority of the State under the owner-initiated acquisition provisions may, before it is used for the purpose for which it is reserved, be carried out, with development consent, for any purpose.

Note 7: Under the terms of Clause 5.3 of Penrith Local Environmental Plan 2010 development consent may be granted to development of certain land for any purpose that may be carried out in an adjoining zone.

Note 8: Under the terms of Clause 5.9 of Penrith Local Environmental Plan 2010 trees or other vegetation subject to relevant sections of Penrith Development Control Plan 2014 must not be ringbarked, cut down, topped, lopped, removed, injured or wilfully destroyed without the authority conferred by a development consent or a Council permit.

Note 9: Under the terms of Clause 5.9AA of Penrith Local Environmental Plan 2010 (PLEP 2010) any tree or other vegetation that is not of a species or kind prescribed for the purposes of Clause 5.9 of PLEP 2010 by Penrith Development Control Plan 2014 may be ringbarked, cut down, topped, lopped, removed, injured or destroyed without development consent.

Note 10: Clause 5.10 of Penrith Local Environmental Plan 2010 details when development consent is required/not required in relation to heritage conservation.

Note 11: Under the terms of Clause 5.11 of Penrith Local Environmental Plan 2010 bush fire hazard reduction work authorised by the *Rural Fires Act 1997* may be carried out on any land without development consent.

Note 12: Under the terms of Clause 7.1 of Penrith Local Environmental Plan 2010 (PLEP 2010) development consent is required for earthworks unless the work is exempt development under PLEP 2010 or another applicable environmental planning instrument, or the work is ancillary to other development for which development consent has been given.

Note 13: Sex services premises and restricted premises may only be permitted subject to the requirements of Clause 7.23 of Penrith Local Environmental Plan 2010.

2(e) whether any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed:

(Information is provided in this section only if any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed.)

2(f) whether the land includes or comprises critical habitat:

(Information is provided in this section only if the land includes or comprises critical habitat.)

2(g) whether the land is in a conservation area (however described):

(Information is provided in this section only if the land is in a conservation area (however described).)

2(h) whether an item of environmental heritage (however described) is situated on the land:

(Information is provided in this section only if an item of environmental heritage (however described) is situated on the land.)

2A ZONING AND LAND USE UNDER STATE ENVIRONMENTAL PLANNING POLICY (SYDNEY REGION GROWTH CENTRES) 2006

(Information is provided in this section only if the land is within any zone under State Environmental Planning Policy (Sydney Region Growth Centres) 2006.)

3 COMPLYING DEVELOPMENT

GENERAL HOUSING CODE
(The General Housing Code only applies if the land is within Zones R1, R2, R3, R4 or RU5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the General Housing Code **may** be carried out on the land if the land is within one of the abovementioned zones.

RURAL HOUSING CODE
(The Rural Housing Code only applies if the land is within Zones RU1, RU2, RU3, RU4, RU6 or R5 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the Rural Housing Code **may** be carried out on the land if the land is within one of the abovementioned zones.

HOUSING ALTERATIONS CODE

Complying development under the Housing Alterations Code **may** be carried out on the land.

GENERAL DEVELOPMENT CODE

Complying development under the General Development Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL ALTERATIONS CODE

Complying development under the Commercial and Industrial Alterations Code **may** be carried out on the land.

SUBDIVISIONS CODE

Complying development under the Subdivisions Code **may** be carried out on the land.

Environmental Planning and Assessment Act, 1979

DEMOLITION CODE

Complying development under the Demolition Code **may** be carried out on the land.

COMMERCIAL AND INDUSTRIAL (NEW BUILDINGS AND ADDITIONS) CODE

(The Commercial and Industrial (New Buildings and Additions) Code only applies if the land is within Zones B1, B2, B3, B4, B5, B6, B7, B8, IN1, IN2, IN3, IN4 or SP3 under Penrith Local Environmental Plan 2010 or an equivalent zone in a non standard template planning instrument.)

Complying development under the Commercial and Industrial (New Buildings and Alterations) Code **may** be carried out on the land if the land is within one of the abovementioned zones.

FIRE SAFETY CODE

Complying development under the Fire Safety Code **may** be carried out on the land.

(NOTE: (1) Council has relied on Planning and Infrastructure Circulars and Fact Sheets in the preparation of this information. Applicants should seek their own legal advice in relation to this matter with particular reference to State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.

(2) Penrith Local Environmental Plan 2010 (if it applies to the land) contains additional complying development not specified in State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.)

4 COASTAL PROTECTION

The land is not affected by the operation of sections 38 or 39 of the Coastal Protection Act 1979, to the extent that council has been so notified by the Department of Public Works.

5 MINE SUBSIDENCE

The land is not proclaimed to be a mine subsidence district within the meaning of section 15 of the Mine Subsidence Compensation Act 1961.

6 ROAD WIDENING AND ROAD REALIGNMENT

The land is not affected by any road widening or road realignment under:
(a) Division 2 of Part 3 of the Roads Act 1993, or
(b) an environmental planning instrument, or
(c) a resolution of council.

7 COUNCIL AND OTHER PUBLIC AUTHORITY POLICIES ON HAZARD RISK RESTRICTIONS

(a) Council Policies
The land is affected by the Asbestos Policy adopted by Council.

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

The land is not affected by any other policy adopted by the council that restricts the development of the land because of the likelihood of land slip, bushfire, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

(b) Other Public Authority Policies

The Bush Fire Co-ordinating Committee has adopted a Bush Fire Risk Management Plan that covers the local government area of Penrith City Council, and includes public, private and Commonwealth lands.

The land is not affected by a policy adopted by any other public authority and notified to the council for the express purpose of its adoption by that authority being referred to in planning certificates issued by the council, that restricts the development of the land because of the likelihood of land slip, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding).

7A FLOOD RELATED DEVELOPMENT CONTROLS INFORMATION

(1) Development on the land or part of the land for the purposes of dwelling houses, dual occupancies, multi dwelling housing or residential flat buildings (not including development for the purposes of group homes or seniors housing) (if such uses are permissible on the land) is subject to flood related development controls.

(2) Development on the land or part of the land for industrial or commercial purposes (if such uses are permissible on the land) is subject to flood related development controls.

Development on the land or part of the land for purposes other than industrial or commercial, or for purposes other than those referred to in (1) above, will be considered on a merits based approach and flood related development controls may apply.

Note: The land is subject to Penrith Development Control Plan 2014 Section C3.5 Flood Planning. On application and payment of the prescribed fee Council may be able to provide in writing a range of advice in regard to the extent of flooding affecting the property.

8 LAND RESERVED FOR ACQUISITION

No environmental planning instrument or proposed environmental planning instrument referred to in clause 1 makes provision in relation to the acquisition of the land by a public authority, as referred to in section 27 of the Act.

9 CONTRIBUTIONS PLANS

The Cultural Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith.

The Penrith City Local Open Space Development Contributions Plan 2007 applies anywhere residential development is permitted within the City of Penrith, excluding industrial areas and the release areas identified in Appendix B of the Plan (Penrith Lakes, Cranebrook, Sydney Regional Environmental Plan No. 30 - St Marys, Waterside, Thornton, the WELL Precinct, Glenmore Park and Erskine Park). See <http://www.penrithcity.nsw.gov.au/uploadedFiles/Content/Website/Our_Services/Planning_and_Development/Planning__Zoning_Information/Local_Planning_Documents/LocalOpenSpaceDCP(1).pdf>

The Penrith City District Open Space Facilities Development Contributions Plan applies anywhere residential development is permitted within the City of Penrith, with the exclusion of industrial lands and the Penrith Lakes development site.

The Penrith City Centre Civic Improvement Plan applies to the land.

9A BIODIVERSITY CERTIFIED LAND

(Information is provided in this section only if the land is biodiversity certified land (within the meaning of Part 7AA of the *Threatened Species Conservation Act 1995*).)

10 BIOBANKING AGREEMENTS

(Information is provided in this section only if Council has been notified by the Director-General of the Department of Environment, Climate Change and Water that the land is land to which a biobanking agreement under Part 7A of the *Threatened Species Conservation Act 1995* relates.)

11 BUSH FIRE PRONE LAND

The land is not identified as bush fire prone land according to Council records.

12 PROPERTY VEGETATION PLANS

(Information is provided in this section only if Council has been notified that the land is land to which a property vegetation plan under the Native Vegetation Act 2003 applies.)

13 ORDERS UNDER TREES (DISPUTES BETWEEN NEIGHBOURS) ACT 2006

(Information is provided in this section only if Council has been notified that an order has been made under the Trees (Disputes Between Neighbours) Act 2006 to carry out work in relation to a tree on the land.)

14 DIRECTIONS UNDER PART 3A

(Information is provided in this section only if there is a direction by the Minister in force under section 75P(2)(c1) of the Act that a provision of an environmental planning instrument prohibiting or restricting the carrying out of a project or a stage of a project on the land under Part 4 of the Act does not have effect.)

15 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS AFFECTING SENIORS HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (seniors housing), of which the council is aware, issued under State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 18(2) of State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 have been imposed as a condition of consent to a development application granted after 11 October 2007 in respect of the land.)

PLANNING CERTIFICATE UNDER SECTION 149

Environmental Planning and Assessment Act, 1979

16 SITE COMPATIBILITY CERTIFICATES FOR INFRASTRUCTURE

(Information is provided in this section only if there is a valid site compatibility certificate (infrastructure), of which council is aware, in respect of proposed development on the land.)

17 SITE COMPATIBILITY CERTIFICATES AND CONDITIONS FOR AFFORDABLE RENTAL HOUSING

(Information is provided in this section only if:

(a) there is a current site compatibility certificate (affordable rental housing), of which the council is aware, in respect of proposed development on the land; and/or

(b) any terms of a kind referred to in clause 17(1) or 37(1) of State Environmental Planning Policy (Affordable Rental Housing) 2009 have been imposed as a condition of consent to a development application in respect of the land.)

18 PAPER SUBDIVISION INFORMATION

(Information is provided in this section only if a development plan adopted by a relevant authority applies to the land or is proposed to be subject to a consent ballot, or a subdivision order applies to the land.)

19 SITE VERIFICATION CERTIFICATES

(Information is provided in this section only if there is a current site verification certificate, of which council is aware, in respect of the land.)

NOTE: The following matters are prescribed by section 59(2) of the Contaminated Land Management Act 1997 as additional matters to be specified in a planning certificate

(a) (Information is provided in this section only if, as at the date of this certificate, the land (or part of the land) is significantly contaminated land within the meaning of the Contaminated Land Management Act 1997.)

(b) (Information is provided in this section only if, as at the date of this certificate, the land is subject to a management order within the meaning of the Contaminated Land Management Act 1997.)

(c) (Information is provided in this section only if, as at the date of this certificate, the land is the subject of an approved voluntary management proposal within the meaning of the Contaminated Land Management Act 1997.)

(d) (Information is provided in this section only if, at the date of this certificate, the land subject to an ongoing maintenance order within the meaning of the Contaminated Land Management Act 1997.)

(e) (Information is provided in this section only if the land is the subject of a site audit statement within the meaning of the Contaminated Land Management Act 1997 – a copy of which has been provided to Council.)

Note: Section 149(5) information for this property may contain additional information regarding contamination issues.

Note: The Environmental Planning and Assessment Amendment Act 1997 commenced operation on the 1 July 1998. As a consequence of this Act the information contained in this certificate needs to be read in conjunction with the provisions of the Environmental Planning and Assessment (Amendment) Regulation 1998, Environmental Planning and Assessment (Further Amendment) Regulation 1998 and Environmental Planning and Assessment (Savings and Transitional) Regulation 1998 and Environmental Planning and Assessment Regulation 2000.

Information is provided only to the extent that Council has been notified by relevant government departments.

149(5) Certificate
This Certificate is directed to the following relevant matters affecting the land

When information pursuant to section 149(5) is requested the Council is under no obligation to furnish any of the information supplied herein pursuant to that section. Council draws your attention to section 149(6) which states that a council shall not incur any liability in respect of any advice provided in good faith pursuant to sub-section (5). The absence of any reference to any matter affecting the land shall not imply that the land is not affected by any matter not referred to in this certificate.

Note:

- Council's 149(5) information does not include development consent or easement information. Details of development consents may be obtained by making enquiries with Council's Development Services Department pursuant to section 12 of the Local Government Act 1993 or (for development applications lodged after January 2007) by viewing the Online Services area at www.penrithcity.nsw.gov.au . Details of any easements may be obtained from a Title Search at Land and Property Information New South Wales.
- This certificate does not contain information relating to Complying Development Certificates.
- This certificate may not provide full details of development rights over the land.

* Threatened Species Conservation Act 1995

When considering any development application Council must have regard to the Threatened Species Conservation Act 1995. Please note that this legislation may have application to any land throughout the city. Interested persons should make their own enquiries in regard to the impact that this legislation could have on this land.

* Preservation of Trees and Vegetation

See Clauses 5.9 and 5.9AA of Penrith Local Environmental Plan 2010 and Chapter C2 of Penrith Development Control Plan 2014 for specific controls relating to the preservation of trees and vegetation.

* Development Control Plan General Information

Penrith Development Control Plan 2014 which applies to the land, sets out requirements for a range of issues that apply across the Penrith Local Government Area, including:

- Site Planning and Design Principles

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

- Vegetation Management
- Water Management
- Land Management
- Waste Management
- Landscape Design
- Culture and Heritage
- Public Domain
- Advertising and Signage
- Transport, Access and Parking
- Subdivision
- Noise and Vibration, and
- Infrastructure and Services.

The Development Control Plan also specifies requirements relating to various types of land uses including:

- Rural Land Uses
- Residential Development
- Commercial and Retail Development, and
- Industrial Development

as well as for a number of specific activities, including child care centres; health consulting rooms; educational establishments; parent friendly amenities; places of public worship; vehicle repair stations; cemeteries, crematoria and funeral homes; extractive industries; and telecommunication facilities.
The Development Control Plan also details requirements relating to key precincts within the Penrith Local Government Area, including:

- Caddens
- Claremont Meadows Stage 2
- Cranebrook
- Emu Heights
- Emu Plains
- Erskine Business Park
- Glenmore Park
- Kingswood
- Mulgoa Valley
- Orchard Hills
- Penrith
- Penrith Health and Education Precinct
- Riverlink Precinct
- St Clair, and
- St Marys / St Marys North.

Penrith Development Control Plan 2014 may be accessed at https://www.penrithcity.nsw.gov.au/Building-and-Development/Planning-and-Zoning/Planning-Controls/Development-Control-Plans/

Search for NSW heritage

Return to search page where you can refine/broaden your search.

Statutory listed items

Information and items listed in the State Heritage Inventory come from a number of sources. This means that there may be several entries for the same heritage item in the database. For clarity, the search results have been divided into three sections.

- **Section 1** - contains Aboriginal Places declared by the **Minister for the Environment** under the National Parks and Wildlife Act. This information is provided by the Heritage Division.
- **Section 2** - contains heritage items listed by the **Heritage Council of NSW** under the NSW Heritage Act. This includes listing on the State Heritage Register, an Interim Heritage Order or protected under section 136 of the NSW Heritage Act. This information is provided by the Heritage Division.
- **Section 3** - contains items listed by **local councils** on Local Environmental Plans under the Environmental Planning and Assessment Act, 1979 and **State government agencies** under s.170 of the Heritage Act. This information is provided by local councils and State government agencies.

Section 1. Aboriginal Places listed under the National Parks and Wildlife Act.

Your search did not return any matching results.

Section 2. Items listed under the NSW Heritage Act.

Guidance Notes for Part B – Site sketch

Please read these notes before you draw the site sketch. For more information, please phone (02) 9370 5187 and ask for the leaflet about site sketches.

A site sketch, drawn in black on A4 size paper, is required as part of the application. This sketch will be scanned by computer so that it can be made available to emergency services in the case of an incident. The site sketch must be drawn:

- with thick lines in black ink. DO NOT USE COLOUR. Keep it simple and clear.
- on A4 size paper.
- with all lettering at least 3 mm high (THIS SIZE OR LARGER).

The site sketch must show the following if they exist:

1 public roads (with names)
2 internal road layout
3 site main entrance
4 other entry points
5 each dangerous goods depot, Class of goods & depot number
6 emergency equipment including hydrants, hoses, extinguishers
7 approximate location of underground tanks
8 nature of adjoining sites
9 manufacturing/ processing areas
10 location of site register (if any) and site map
11 distances between dangerous goods depots and public places
12 distances between dangerous goods depots and protected places
13 distances between dangerous goods depots
14 emergency isolation points for power, fuel, etc

and other information which could assist emergency services. For example, include the location of large stores of combustible materials, process vessels or cylinders containing dangerous goods.

If the site is too large to include all this information on one A4 sheet, please provide a key map showing the location of sub-areas and a separate A4 sheet for each sub-area.

Site sketch example (reduced in size)

Dear Ms Pasfield

RE: APPLICATION NO. 10880 FOR LICENCE TO KEEP DANGEROUS GOODS
PREMISES: 117 HENRY ST, PENRITH 2750

In response to your letter of 29.4.00, I wish to clarify that two cylinders have been removed from Penrith TAFE, no additional cylinders have been added. This leaves only one (1) cylinder which was originally included in the Dangerous Goods Licence.

Please advise me if I need to do anything further.

Yours faithfully

Dear Sir/Madam

The attached letter was sent to me regarding our Penrith's Site Dangerous Goods Licence No. 35/010880, please note that the Kleenheat Gas Cylinder is under the Manifest Quantity of 5,000 L therefore, we do not need to renew this Licence which expires on 6.2.2006. I would appreciate it if you can confirm in writing that this is correct.

Licence No.35/030992, I have not been issued with a renewal notice, which expired on 13.11.05, but going by the letter I received above for Penrith Site, I have updated our Kingswood Site information as attached. I would appreciate it if you can confirm that we do not need to notify you of Petrol which is under the Manifest Quantity of 500 L in writing that this is correct also.

Yours faithfully

New South Wales.

APPLICATION TO BRING LANDS UNDER THE PROVISIONS OF THE REAL PROPERTY ACT, 1900

FEE SIMPLE(a)

CAUTION.—Severe penalties are provided by the Crimes Act, 1900, and the Real Property Act, 1900, for procuring a certificate of title through fraud.

(a) If a less estate, strike out "fee simple" and substitute the appropriate estate.

(b) State state full name, postal address and occupation of declarant.

I/WE(b) ROBIN ROY SPEED of 2 O'Connell Street, Sydney, Solicitor, having been duly appointed in writing as Attorney for Peter Shaw and Associates Pty. Limited for the purposes of this application

do solemnly and sincerely declare, that

(c) Here state full name and postal address of person or corporation entitled. Where a person is entitled, the occupation (if such person is male) or marital status (if female) should be stated.

(c) PETER SHAW AND ASSOCIATES PTY. LIMITED, a Company duly incorporated in the State of New South Wales and having its registered office there at 716 New South Head Road, Rose Bay..

I/we is/are seized for an Estate in fee simple(a) of all that piece of land situated at Penrith in the County of Cumberland and Parish of Castlereagh being(d)

(d) The application should be accompanied by a plan of survey unless the Registrar-General has previously dispensed therewith.

Give full description of the land, e.g., "Lot ... in Deposited Plan No. ..." (or as the case may be) ... plan No. ...", or "Lot ... in plan lodged herewith"; or "The whole ... (or specified part) ... of the land described in deed registered Book ... No. ...".

If any appurtenant easement is claimed, it must be specified in this description and in the plan.

If there be any rights of way or other rights or easements affecting the premises the particulars should be stated.

the whole of the land described in Conveyance registered number 751 Book 3001 together with right of way as shown edged red on plan endorsed on Conveyance Registered Number 195 Book 1396.

124a

Lost Plan P 180 29/2/72

(e) State whether "the whole" or "part".

(f) Insert allotment with reference to number and section on plan, if any, or if not, number of acres granted.

(g) Name of Grantee.

which land is(e) part of(f) 1000 acres originally granted to(g) DANIEL WOODRIFF by Crown grant, under the hand of the Governor of the Colony, dated the 18th day of December, 1805

And I/We hereby apply to have the land described in the above declaration brought under the provisions of the Real Property Act, and request you to issue the Certificate of Title in the name of

(h) As in marginal note (c) above. If two or more are entitled, state whether as joint tenants or tenants in common; if as tenants in common, state shares.

(h) PETER SHAW AND ASSOCIATES PTY. LIMITED of 716 New South Head Road, Rose Bay.

and I/We further declare that the owners and occupiers of adjacent lands are as follows

State whether on North, South, East or West	Name and postal address of owner	Name and postal address of occupier
NORTH	Penrith City Council	–
SOUTH	Penrith City Council	–
EAST		
WEST

28 AUG 1973

No alterations should be made by erasure. The words rejected should be scored through with the pen, and those substituted written over them, the alteration being verified by signature or initials in the margin, or noticed in the attestation.

073648

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

And I/We further declare, that:—

(1) There is no person in possession or occupation of the said land or any part thereof adversely to my/our interest therein, and that the land is now(i) in the occupation of Peter Shaw and Associates Pty. Limited

(i) Insert "unoccupied" or "in the occupation of" adding names and addresses of tenants in full. State also nature of tenancy.

(2) There does not exist any lease or agreement for lease of the said land for any term exceeding a tenancy for one year, or from year to year,(j)

(j) If there be any Lease, add the words "except as follows" and insert particulars thereof.

(3) There does not exist any mortgage, lien, writ of execution, charge or encumbrance, will or settlement, or any deed or writing, contract, or dealing (other than such lease or tenancy as aforesaid), giving any right, claim, or interest in or to the said land, or any part thereof, to any other person than myself/ourselves(k)

(k) If there be any mortgage, lien, etc., add the words "except as follows" and insert particulars thereof.

(4) The Schedule hereon* to which my/our signature is/are affixed, and which is to be taken as part of this Declaration contains a full and correct list(l) commencing with Conveyance dated 5th August 1925 and 4th November 1954 registered No. 195 Book 1396 and Registered No 39 Book 2323 respectively of all settlements, deeds, documents, or instruments, maps, plans and papers relating to the land comprised in this application, so far as I/we have any means of ascertaining the same, distinguishing such as being in my/our possession or under my/our control, are herewith lodged and indicating where or with whom, so far as known to me/us, any others thereof are deposited. Also, that there does not exist any fact or circumstance whatever material to the title, which is not hereby fully and fairly disclosed to the utmost extent of my/our knowledge, information, and belief; and that there is not, to my/our knowledge and belief, any action or suit pending affecting the said land, nor any person who has or claims any estate, right, title or interest therein, or in any part thereof, otherwise than by virtue and to the extent of some lease or tenancy hereby fully disclosed.(m)

(l) The declaration may be qualified to the extent to which Applicant's title has been previously passed by the Registrar General by inserting the words "Commencing with Conveyance dated ..... registered ....." or as the case may be. Otherwise all documents from the Crown Grant onwards must be entered in the Schedule.

(m) If there be any exception add the words "except as follows" and insert necessary particulars.

And I/We make this solemn Declaration, conscientiously believing the same to be true and by virtue of the Oaths Act, 1900.(n)

(n) If made outside N.S.W. strike out Oaths Act, 1900, and insert reference to local Act.

And I/We certify that the within application is correct for the purposes of the Real Property Act, 1900.(o)

(o) Section 117 requires that the Certificate be signed by Applicant or his Solicitor and renders liable any person falsely or negligently certifying, to a penalty also, to damages recoverable by parties injured.

(RULE UP ALL BLANKS BEFORE SIGNING)

Made and subscribed by the abovenamed ROBIN RAY SPEED

this 27th day of January 1972

in the presence of(p) T.S. A Stewart J.P.

Signature of Applicant

(p) If made in N.S.W., this declaration must be attested by a Notary Public, Justice of the Peace or Commissioner for Affidavits. If made outside N.S.W., the declaration should be made according to the law of the State in which it is made and before a person authorised by that law to take declarations.

NEW SOUTH WALES

PRIMARY APPLICATION

SECTION 14, REAL PROPERTY ACT, 1900

STAMP DUTY $

OFFICE USE ONLY

$ 20

Paid on 4569. 4/11/77

CAUTION.—Severe penalties are provided by the Crimes Act, 1900, and the Real Property Act, 1900, for procuring a certificate of title through fraud.

Typewriting and handwriting should be clear, legible and in permanent black non-carrying ink. No alterations should be made by erasure; the words rejected must be ruled through and verified by signature or initials in the margin.

(a) Full name and postal address of person or corporation entitled to the land. If a person is entitled, the occupation should also be stated.

(a) * ALTCO HOLDINGS PTY. LIMITED of 40 Yeo Street, Neutral Bay.

hereinafter referred to as the APPLICANT

hereby applies to have the undermentioned land brought under the provisions of the Real Property Act, 1900

(b) Give an adequate description of the land, e.g. "Lot — in Deposited Plan —". If an appurtenant easement is claimed, the deed creating it should be disclosed and an adequate description of its location should be given; its location should also be shown on the plan.

The application should be accompanied by a plan of survey unless the Registrar General has previously dispensed therewith. A plan is not normally required where the application relates to land in a qualified certificate of title; in such case it will be sufficient to describe the land by reference to the volume and folio number of the qualified certificate of title.

(c) Delete whichever is inapplicable.

(d) Insert reference to portion or allotment, or if none, to number of acres granted.

(e) Name of grantee.

All that piece of land situated at Penrith in the County of Cumberland Parish of Castlereagh being(b) Lot 3 in Miscellaneous Plan of Subdivision (Old System) No. 14798 (now Filed Plan No. 164798)

and being ~~the whole(c)~~ part of(d) Daniel Woodriff's 1000 acre ~~granted to(e) by Crown grant dated the day of~~

and requests that the certificate of title issue in the name of

(f) If the certificate of title is required to issue in favour of the applicant, insert "the applicant"; otherwise here insert the full name of the person or corporation in whose name the certificate of title is to issue. In the case of a person, the full postal address and occupation should also be stated.

If more than one nominee, state whether as joint tenants or tenants in common.

Unless otherwise stated, tenants in common will be presumed to hold in equal shares.

(f) the applicant

and in support of this application I/We(g) GLYN TERRINGTON THOMAS of 53 Acacia Avenue, Ryde, Company Secretary (Nov. date 39).

(g) Full name, address and occupation of deponent.

(h) If a lesser estate, alter accordingly.

solemnly and sincerely declare that—

1. The applicant is seised for an estate in fee simple(h) of the abovedescribed land.

(i) Delete whichever is inapplicable.

2. There is no person in possession or occupation of the said land or any part thereof adversely to the estate or interest therein of the applicant.

3. The said land is now(i) ~~occupied by the persons specified in the First Schedule as occupiers.~~ unoccupied.

4. There does not exist any lease or agreement for lease of the said land for any term exceeding a tenancy for one year, or from year to year, except as set out in the First Schedule.

5. There does not exist any right of way, right of drainage or other easement or any restrictive covenant affecting the said land, except as disclosed in the First Schedule.

(j) Should any transaction affecting the land in this application be entered into or any alterations in the buildings or fences be made subsequent to the date of the application, but prior to the issue of the certificate of title, the Registrar General should be informed immediately, and all documents evidencing such transaction should be lodged.

6. There does not exist any mortgage, lien, writ of execution, order, charge, encumbrance, will, settlement, deed, writing, contract, or dealing giving any right, claim or interest in the said land, or any part thereof, to any person other than the applicant except as set out in the First Schedule; nor, to the best of my knowledge and belief, is there any action, proceeding or suit pending which affects or could affect the said land, or any person other than the applicant who has or claims any estate, right, title or interest therein, except as disclosed in the First Schedule.(j)

7. There is no resumption or instrument whereby minerals or substrata have been excepted or reserved to any person, except as disclosed in the First Schedule.

(k) The declaration may be qualified, e.g. by inserting the words "commencing with conveyance dated ——— registered Book ——— No. ———" or as the case may be. See also notes on back page hereof.

8. The Second Schedule contains a full and correct list(k) commencing with Conveyance dated 18th April, 1936 registered Book 1747 No. 31.

of all settlements, deeds, documents, instruments, maps, plans and papers relating to the said land so far as I have any means of ascertaining them. All such documents as are in my possession or under my control are lodged herewith; the whereabouts of all other documents listed, so far as is known to me, is stated in such list.

9. The applicant has not become bankrupt or assigned his estate for the benefit of creditors.

Cert. of T., issued Vol 13820 Fol 105 Dated —5 MAR 1979

* Now "ALLEN HOLDINGS PTY LIMITED" see Book 4144 No 776

10. The information shown in the Schedules hereto is to be taken as part of this declaration.

11. I have been authorised by power of attorney dated the TENTH day of OCTOBER, 1977 to make this application on behalf of the applicant, and I have received no notice of revocation of such authority.(f)

(f) Delete this clause if inapplicable. The relevant power of attorney or other such authority should be lodged with the application.

I make this solemn declaration conscientiously believing the same to be true and by virtue of the Oaths Act, 1900,(m) and certify this application to be correct for the purposes of the Real Property Act, 1900.(n)

(m) If made outside N.S.W., strike out Oaths Act, 1900 and insert reference to local Act.

(n) Any person falsely or negligently certifying is liable to the penalties provided by section 117 of the Real Property Act, 1900.

Made and subscribed at Sydney the TENTH day of OCTOBER, 1977,

Area 1102 m².

DEPARTMENTAL USE ONLY

NOTES

Documents to be scheduled

Where an applicant claims an estate in fee simple by virtue of a documentary title the Second Schedule should commence with a good root of title at least thirty years old or with a later deed which has already been accepted by the Registrar General in an earlier application. Clause 8 of the declaration should be suitably amended.

Where the applicant claims title by possession the devolution of the documentary title of the person(s) against whom possession is asserted should be shown in the Second Schedule.

Where the applicant claims the benefit of an appurtenant easement the Second Schedule should contain a reference to:

* the deed by which the grantor of the easement acquired title to the servient tenement, and
* the deed by which the easement was created.

The applicant will be required to establish (e.g. by searches) that the easement has not been determined by surrender, union of tenements or otherwise.

Documents to be lodged

Upon lodgment the application should be accompanied by:

* all deeds and other documents evidencing the devolution of title from the abovementioned commencing point;

  Deeds and other documents which relate to the period prior to the selected commencing point should not be scheduled in or lodged with this application but should be retained in case the Examiner of Titles should require their subsequent production.
* any abstract(s) of title in the applicant's possession covering the relevant period; and
* searches showing the result of searches in the general register of deeds, the register of causes, writs and orders, the register of resumptions and the bankruptcy registers.

Searches

The searches obtained when the applicant or a predecessor in title acquired the land in the application will suffice provided that they commence with a good root of title at least thirty years old or with a later deed already accepted by the Registrar General in an earlier application and, in either case, have been brought up to date or to a recent date. In the case of an application based on possession the searches should show not only the devolution of the documentary title (which in most cases will need to be traced from the Crown grant) but also the result of searches against the applicant and his predecessors in possession.

Applications based upon possession

There is available upon request at the Examiners Branch a departmental circular containing directions for the guidance of applicants who claim title by possession.

Destruction of documents lodged with the application

Upon the issue of the certificate of title the Registrar General will as a general rule destroy those documents which exclusively affect the land in the application (and which accordingly will be totally cancelled pursuant to Section 29 (2), Real Property Act, 1900). However, documents which would otherwise be destroyed may be returned upon request to interested persons. The request (in writing) should specify the documents to be returned and should be made before the processing of the application has been completed.

Subject: RE: 5 DAY TAT - 545235 - FW: Awaiting analysis

Follow Up Flag: Follow up
Flag Status: Flagged

Thanks Ursula,

Log them all as per Rohan's email for now and ask Matt to check the volumes.

Matt – Can you take care of this please? We may have to analyse different samples instead if the sample volumes are low.

Kind Regards,

Nibha Vaidya

Hi Nibha,
Not all the bags are full so not sure if all can be done.
I'll go through them & let you know what can be.
Do you want me to weigh them?

Document Set ID: 9547379

Hi all,

just noticed that the Penrith samples have been logged as two separate jobs/reports - 545235 and 525227. Can you samples are from the same sampling batch.

Kind Regards,
Rohan Hammond

COC number: Not provided
Turn around time: 5 Day
Date/Time received: May 8, 2017 12:00 PM
Eurofins | mgt reference: **545235**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 23.5 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☑ Sample containers for volatile analysis received with zero headspace.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

Attention:	Rohan Hammond
Report	545235-AID
Project Name	PENRITH
Project ID	52372
Received Date	May 08, 2017
Date Reported	May 17, 2017

Methodology:

Asbestos ID	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. Bulk samples include building materials, soils and ores.
Subsampling Soil Samples	The whole sample submitted is first dried and then sieved through a 10mm sieve followed by a 2mm sieve. All fibrous matter viz greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) Iron ores - Sampling and Sample preparation procedures is employed. Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis in accordance with AS 4964-2004.
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated and where required interfering organic fibres or matter may be removed by treating the sample for several hours at a temperature not exceeding 400 ± 30°C. The resultant material is then ground and examined in accordance with AS 4964-2004.
Limit of Reporting	The nominal detection limit of the AS4964 method is around 0.01%. The examination of large sample sizes (at least 500 ml is recommended) may improve the likelihood of identifying asbestos material in the greater than 2 mm fraction. The NEPM screening level of 0.001% w/w asbestos in soil for FA and AF (i.e. non-bonded/friable asbestos) only applies where the FA and AF are able to be quantified by gravimetric procedures. This screening level is not applicable to free fibres. NOTE: NATA News, September 2011 – page 34, states, “Weighing of fibres is problematic and can lead to loss of fibres and potential exposure for laboratory analysts. To request laboratories to report information which is outside the scope of AS 4964-2004 and the scope of their accreditation is misleading and is most unwise” therefore such values reported are outside the scope of Eurofins | mgt NATA accreditation as designated by an asterisk.

Project Name PENRITH
Project ID 52372
Date Sampled May 06, 2017 to May 07, 2017
Report 545235-AID

Client Sample ID	Eurofins | mgt Sample No.	Date Sampled	Sample Description	Result
JB08_0.1-0.2	17-My07714	May 06, 2017	Approximate Sample 606g Sample consisted of: Red-brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]
JB06_0.1-0.2	17-My07719	May 06, 2017	Approximate Sample 555g Sample consisted of: Brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]
JB18_0.1-0.2	17-My07724	May 06, 2017	Approximate Sample 506g Sample consisted of: Brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]
JB19_1.6-1.7	17-My07730	May 06, 2017	Approximate Sample 400g Sample consisted of: Light brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]
JB20_0.5-0.6	17-My07733	May 06, 2017	Approximate Sample 707g Sample consisted of: Brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]
JB20_1.7-1.8	17-My07737	May 06, 2017	Approximate Sample 208g Sample consisted of: Brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.01% w/w.* Organic fibre detected. No respirable fibres detected.
JB11_0.05-0.15	17-My07740	May 06, 2017	Approximate Sample 641g Sample consisted of: Dark brown fine grain soil, rocks and organic debris	AF: Chrysotile, amosite and crocidolite asbestos detected in fibre cement fragments. Approximate raw weight of AF = 0.033g Estimated asbestos content in AF = 0.0040g* Total estimated asbestos concentration in AF = 0.00062% w/w* No asbestos detected at the reporting limit of 0.001% w/w.* Synthetic mineral fibre detected. Organic fibre detected.[M11]
QC20160506_1	17-My07743	May 06, 2017	Approximate Sample 752g Sample consisted of: Dark brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]

Client Sample ID	Eurofins | mgt Sample No.	Date Sampled	Sample Description	Result
JB10_0.1-0.2	17-My07847	May 07, 2017	Approximate Sample 754g Sample consisted of: Red-brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]
JB17_0.1-0.25	17-My07851	May 07, 2017	Approximate Sample 806g Sample consisted of: Brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]
JB14_0.1-0.3	17-My07857	May 07, 2017	Approximate Sample 956g Sample consisted of: Brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]
JB12_0.1-0.25	17-My07864	May 07, 2017	Approximate Sample 827g Sample consisted of: Grey fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]
JB04_0.4-0.5	17-My07868	May 07, 2017	Approximate Sample 818g Sample consisted of: Brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]
JB01_0.05-0.3	17-My07879	May 07, 2017	Approximate Sample 496g Sample consisted of: Brown fine grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Asbestos - LTM-ASB-8020	Sydney	May 17, 2017	Indefinite
Asbestos - LTM-ASB-8020	Sydney	May 17, 2017	Indefinite

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
COC	Chain of custody
SRA	Sample Receipt Advice
ISO	International Stardards Organisation
AS	Australian Standards
WA DOH	Western Australia Department of Health
NOHSC	National Occupational Health and Safety Commission
ACM	Bonded asbestos-containing material means any material containing more than 1% asbestos and comprises asbestos-containing-material which is in sound condition, although possibly broken or fragmented, and where the asbestos is bound in a matrix such as cement or resin. Common examples of ACM include but are not limited to: pipe and boiler insulation, sprayed-on fireproofing, troweled-on acoustical plaster, floor tile and mastic, floor linoleum, transite shingles, roofing materials, wall and ceiling plaster, ceiling tiles, and gasket materials. This term is restricted to material that cannot pass a 7 mm x 7 mm sieve. This sieve size is selected because it approximates the thickness of common asbestos cement sheeting and for fragments to be smaller than this would imply a high degree of damage and hence potential for fibre release.
FA	FA comprises friable asbestos material and includes severely weathered cement sheet, insulation products and woven asbestos material. This type of friable asbestos is defined here as asbestos material that is in a degraded condition such that it can be broken or crumbled by hand pressure. This material is typically unbonded or was previously bonded and is now significantly degraded (crumbling).
PACM	Presumed Asbestos-Containing Material means thermal system insulation and surfacing material found in buildings, vessels, and vessel sections constructed no later than 1980 that are assumed to contain greater than one percent asbestos but have not been sampled or analyzed to verify or negate the presence of asbestos.
AF	Asbestos fines (AF) are defined as free fibres, or fibre bundles, smaller than 7mm. It is the free fibres which present the greatest risk to human health, although very small fibres (< 5 microns in length) are not considered to be such a risk. AF also includes small fragments of bonded ACM that pass through a 7 mm x 7 mm sieve. (Note that for bonded ACM fragments to pass through a 7 mm x 7 mm sieve implies a substatntial degree of damage which increases the potential for fibre release.)
AC	Asbestos cement means a mixture of cement and asbestos fibres (typically 90:10 ratios).

Comments

My07730, My07879: Sample received was less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Sydney	May 16, 2017	14 Day
- Method: TRH C6-C36 - LTM-ORG-2010

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs 20-130%

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
Q15	The RPD reported passes Eurofins | mgt's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Sydney	May 10, 2017	7 Day
- Method: TRH C6-C36 - LTM-ORG-2010			
BTEX	Sydney	May 10, 2017	14 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	May 10, 2017	7 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Polycyclic Aromatic Hydrocarbons	Sydney	May 10, 2017	7 Day
- Method: E007 Polyaromatic Hydrocarbons (PAH)			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	May 10, 2017	7 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Metals M8	Sydney	May 10, 2017	28 Day
- Method: LTM-MET-3040 Metals in Waters by ICP-MS			
Volatile Organics	Sydney	May 10, 2017	7 Days
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices			
Organochlorine Pesticides	Sydney	May 10, 2017	7 Day
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Polychlorinated Biphenyls	Sydney	May 10, 2017	7 Day
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs 20-130%

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs

Sample Receipt Advice

Company name: **JBS & G Australia (NSW) P/L**

Contact name: Rohan Hammond
Project name: PENRITH DSI
Project ID: 52372
COC number: Not provided
Turn around time: 5 Day
Date/Time received: May 29, 2017 1:50 PM
Eurofins | mgt reference: **548083**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 10.8 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☑ Sample containers for volatile analysis received with zero headspace.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Notes

No Bag received for JHA01_0.4-0.6, sample on HOLD|

Contact notes

If you have any questions with respect to these samples please contact:

Nibha Vaidya on Phone : +61 (2) 9900 8400 or by e.mail: NibhaVaidya@eurofins.com

Results will be delivered electronically via e.mail to Rohan Hammond - rhammond@jbsg.com.au.

Attention:	Rohan Hammond
Report	548083-AID
Project Name	PENRITH DSI
Project ID	52372
Received Date	May 29, 2017
Date Reported	Jun 05, 2017

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS4964 method is around 0.1 g/kg (0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis where required, this is considered to be at the nominal reporting limit of 0.01 % (w / w).The examination of large sample sizes(500 mL is recommended) may improve the likelihood of identifying ACM in the > 2mm fraction.The NEPM screening level of 0.001 % (w / w) asbestos in soil for FA(friable asbestos) and AF(asbestos fines) then applies where they are able to be quantified by gravimetric procedures.This quantitative screening is not generally applicable to FF(free fibres) and results of Trace Analysis are referred. *NOTE: NATA News March 2014, p.7, states in relation to AS4964: "This is a qualitative method with a nominal reporting limit of 0.01%" and that currently in Australia "there is no validated method available for the quantification of asbestos". Accordingly, NATA Accreditation does not cover the performance of this service (indicated with an asterisk).* *This report is consistent with the analytical procedures and reporting recommendations in the National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended) and the Western Australia Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia, 2009, including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil, June 2011.*

JHA08_0.2-0.4	17-My29204	May 26, 2017	Approximate Sample 635g Sample consisted of: Brown coarse grain soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.[M11]

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Western Australia Department of Health
NOHSC	National Occupational Health and Safety Commission
ACM	Bonded asbestos-containing material means any material containing more than 1% asbestos and comprises asbestos-containing-material which is in sound condition, although possibly broken or fragmented, and where the asbestos is bound in a matrix such as cement or resin. Common examples of ACM include but are not limited to: pipe and boiler insulation, sprayed-on fireproofing, troweled-on acoustical plaster, floor tile and mastic, floor linoleum, transite shingles, roofing materials, wall and ceiling plaster, ceiling tiles, and gasket materials. This term is restricted to material that cannot pass a 7 mm x 7 mm sieve. This sieve size is selected because it approximates the thickness of common asbestos cement sheeting and for fragments to be smaller than this would imply a high degree of damage and hence potential for fibre release.
FA	FA comprises friable asbestos material and includes severely weathered cement sheet, insulation products and woven asbestos material. This type of friable asbestos is defined here as asbestos material that is in a degraded condition such that it can be broken or crumbled by hand pressure. This material is typically unbonded or was previously bonded and is now significantly degraded (crumbling).
PACM	Presumed Asbestos-Containing Material means thermal system insulation and surfacing material found in buildings, vessels, and vessel sections constructed no later than 1980 that are assumed to contain greater than one percent asbestos but have not been sampled or analyzed to verify or negate the presence of asbestos.
AF	Asbestos fines (AF) are defined as free fibres, or fibre bundles, smaller than 7mm. It is the free fibres which present the greatest risk to human health, although very small fibres (< 5 microns in length) are not considered to be such a risk. AF also includes small fragments of bonded ACM that pass through a 7 mm x 7 mm sieve. (Note that for bonded ACM fragments to pass through a 7 mm x 7 mm sieve implies a substatntial degree of damage which increases the potential for fibre release.)
AC	Asbestos cement means a mixture of cement and asbestos fibres (typically 90:10 ratios).

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Sydney	Jun 01, 2017	14 Day
- Method: TRH C6-C36 - LTM-ORG-2010			
BTEX	Sydney	Jun 01, 2017	14 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	Jun 01, 2017	14 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	Jun 01, 2017	14 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Polycyclic Aromatic Hydrocarbons	Sydney	Jun 01, 2017	14 Days
- Method: LTM-ORG-2140 PAH and Phenols in Soils by GCMS			
Phenolics (total)	Melbourne	Jun 02, 2017	14 Day
- Method: APHA 5530B & D Phenols			
Metals M8	Sydney	Jun 01, 2017	28 Day
- Method: LTM-MET-3040_R0 TOTAL AND DISSOLVED METALS AND MERCURY IN WATERS BY ICP-MS			
Volatile Organics	Sydney	Jun 01, 2017	7 Days
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices			
Organochlorine Pesticides	Sydney	Jun 01, 2017	14 Day
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Polychlorinated Biphenyls	Sydney	Jun 01, 2017	28 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
% Moisture	Sydney	May 29, 2017	14 Day
- Method: LTM-GEN-7080 Moisture

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs 20-130%

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
Q08	The matrix spike recovery is outside of the recommended acceptance criteria. An acceptable recovery was obtained for the laboratory control sample indicating a sample matrix interference
Q15	The RPD reported passes Eurofins | mgt's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Sydney	May 31, 2017	7 Day
- Method: TRH C6-C36 - LTM-ORG-2010			
BTEX	Sydney	May 29, 2017	14 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	May 29, 2017	7 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	May 31, 2017	7 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Polycyclic Aromatic Hydrocarbons	Sydney	May 31, 2017	7 Days
- Method: LTM-ORG-2130 PAH and Phenols in Water by GCMS			
Metals M8	Sydney	May 29, 2017	28 Day
- Method: LTM-MET-3040 Metals in Waters by ICP-MS			
Volatile Organics	Sydney	May 29, 2017	7 Days
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices			
Organochlorine Pesticides	Sydney	May 31, 2017	7 Day
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Polychlorinated Biphenyls	Sydney	May 31, 2017	7 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Metals M8 filtered	Sydney	May 29, 2017	28 Day
- Method: LTM-MET-3040 Metals in Waters by ICP-MS			
Phenols (Halogenated)	Sydney	May 31, 2017	7 Days
- Method: LTM-ORG-2130 PAH and Phenols in Water by GCMS			
Phenols (non-Halogenated)	Sydney	May 31, 2017	7 Days
- Method: LTM-ORG-2130 PAH and Phenols in Water by GCMS

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs 20-130%

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs

Eurofins | mgt reference: **549116**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 10.8 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Sample Receipt Advice

Company name: **JBS & G Australia (NSW) P/L**

Contact name: Rohan Hammond
Project name: PENRITH
Project ID: 52372
COC number: Not provided
Turn around time: 5 Day
Date/Time received: May 10, 2017 5:00 PM
Eurofins | mgt reference: **545643**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 28 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☒ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Nibha Vaidya on Phone : +61 (2) 9900 8400 or by e.mail: NibhaVaidya@eurofins.com

Results will be delivered electronically via e.mail to Rohan Hammond - rhammond@jbsg.com.au.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Isopropanol*	Melbourne	May 10, 2017	14 Day
- Method: Isopropanol : NIOSH 1400

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

ug/L: micrograms per litre

ppb: Parts per billion

org/100mL: Organisms per 100 millilitres

MPN/100mL: Most Probable Number of organisms per 100 millilitres

mg/L: milligrams per litre

ppm: Parts per million

%: Percentage

NTU: Nephelometric Turbidity Units

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs 20-130%

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Attention: Rohan Hammond

Sample log in details:

Your Reference:	**□2□□2□Penrith**
No. of samples:	4 soils
Date samples received / completed instructions received	08/05/17 / 11/05/17

Analysis Details:
Please refer to the following pages for results, methodology summary and quality control data.
Samples were analysed as received from the client. Results relate specifically to the samples as received.
Results are reported on a dry weight basis for solids and on an as received basis for other matrices.
Please refer to the last page of this report for any comments relating to the results.

Method ID	Methodology Summary
Org-014	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS.
Org-016	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 □(C6-C10)-BTE□ as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater.
Org-016	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 □(C6-C10)-BTE□ as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater. Note, the Total □ve □ylene P□L is reflective of the lowest individual P□L and is therefore "Total □ve □ylenes" is simply a sum of the positive individual □ylenes.
Org-003	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID. F2 □(□C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables 1A (3, 4)). Note Naphthalene is determined from the VOC analysis.
Org-003	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID. F2 □(□C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables 1A (3, 4)). Note Naphthalene is determined from the VOC analysis. Note, the Total □ve TRH P□L is reflective of the lowest individual P□L and is therefore "Total □ve TRH" is simply a sum of the positive individual TRH fractions (□C10-C40).
Org-012	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS. Benzo(a)pyrene TE□ as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater - 2013. For soil results:- 1. □TE□ P□L□values are assuming all contributing PAHs reported as □P□L are actually at the P□L. This is the most conservative approach and can give false positive TE□s given that PAHs that contribute to the TE□ calculation may not be present. 2. □TE□ zero□values are assuming all contributing PAHs reported as □P□L are zero. This is the least conservative approach and is more susceptible to false negative TE□s when PAHs that contribute to the TE□ calculation are present but below P□L. 3. □TE□ half P□L□values are assuming all contributing PAHs reported as □P□L are half the stipulated P□L. Hence a mid-point between the most and least conservative approaches above. Note, the Total □ve PAHs P□L is reflective of the lowest individual P□L and is therefore "Total □ve PAHs" is simply a sum of the positive individual PAHs.
Org-005	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC with dual ECD's.
Org-005	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC with dual ECD's. Note, the Total □ve reported DDD□DDE□DDT P□L is reflective of the lowest individual P□L and is therefore simply a sum of the positive individually report DDD□DDE□DDT.
Org-006	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-ECD.
Org-006	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-ECD. Note, the Total □ve PCBs P□L is reflective of the lowest individual P□L and is therefore" Total □ve PCBs" is simply a sum of the positive individual PCBs.
Metals-020	Determination of various metals by ICP-AES.

Method ID	Methodology Summary
Metals-021	Determination of Mercury by Cold Vapour AAS.
Inorg-031	Total Phenolics by segmented flow analyser (in line distillation with colourimetric finish). Solids are extracted in a caustic media prior to analysis.
Inorg-008	Moisture content determined by heating at 105□/-5 □C for a minimum of 12 hours.
ASB-001	Asbestos ID - Identification of asbestos in soil samples using Polarised Light Microscopy and Dispersion Staining Techniques. Minimum 500mL soil sample was analysed as recommended by "National Environment Protection (Assessment of site contamination) Measure, Schedule B1 and "The Guidelines from the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia - May 2009" with a reporting limit of 0.1g/kg (0.01□ w/w) as per Australian Standard AS4964-2004. Results reported denoted with □are outside our scope of NATA accreditation. **NOTE** □1 Total Asbestos g/kg was analysed and reported as per Australian Standard AS4964 (This is the sum of ACM □7mm, □7mm and FA/AF) **NOTE** □2 The screening level of 0.001□ w/w asbestos in soil for FA and AF only applies where the FA and AF are able to be quantified by gravimetric procedures. This screening level is not applicable to free fibres. Estimation □Estimated asbestos weight Results reported with "--" is equivalent to no visible asbestos identified using Polarised Light microscopy and Dispersion Staining Techniques.
ASB-001	Asbestos ID - □ualitative identification of asbestos in bulk samples using Polarised Light Microscopy and Dispersion Staining Techniques including Synthetic Mineral Fibre and Organic Fibre as per Australian Standard 4964-2004.

Report Comments:

Asbestos-ID in soil: NEPM
This report is consistent with the reporting recommendations in the National Environment Protection (Assessment of Site Contamination) Measure, Schedule B1, May 2013.
This is reported outside our scope of NATA accreditation.

Asbestos ID was analysed by Approved Identifier:	Lucy □hu
Asbestos ID was authorised by Approved Signatory:	Paul Ching

INS: Insufficient sample for this test	P□L: Practical □uantitation Limit	NT: Not tested
NR: Test not required	RPD: Relative Percent Difference	NA: Test not required
□: Less than	□: Greater than	LCS: Laboratory Control Sample

Document Set ID: 9547379
Version: 1, Version Date: 14/04/2021

Quality Control Definitions

Blank: This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.

Duplicate: This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.

Matrix Spike : A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.

LCS □Laboratory Control Sample□: This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.

Surrogate Spike: Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: □5xP□L - any RPD is acceptable; □5xP□L - 0-50□ RPD is acceptable.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130□ for inorganics/metals; 60-140□ for organics (□/-50□ surrogates) and 10-140□ for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory □A/□C protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Subject: RE: Sample Receipt for 166525 52372, Penrith

Hi Simon,

Can we schedule the following analysis on 5 day TAT:

QA20170506-1: Asbestos WA, OCPs, PCBs, VOCs and Suite 4 (TRH/BTEX/PAH/8 Metals/Phenols
QA20170506-2: 8 metals

Thanks and regards,
Rohan.

Subject: Sample Receipt for 166525 52372, Penrith

Please refer to attached for a copy of your COC and our Sample Receipt Advice (SRA).
Please open and read the SRA as it contains important information.
Please let the lab know immediately if there are any issues.

Results will be available by 6.30pm on the date indicated.

PLEASE NOTE COMBO PRICES WILL ONLY APPLY IF COMBOS ARE SELECTED ON COC.

The new 2016-2017 Price List commences 1st November 2015 - please contact us if you don't have a copy.

Please note that subcontracted testing or non routine testing may take significantly longer than just the standard 5 day TAT, contact the lab to get an approximate due date.

Enquiries should be made directly to:

customerservice@envirolab.com.au

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 10.8 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
C01	Leachate Fluid Key: 1 - pH 5.0; 2 - pH 2.9; 3 - pH 9.2; 4 - Reagent (DI) water; 5 - Client sample, 6 - other

Overview Summary
- Count of Samples
- Summary By Compound
- Count of Results

Holding Times
- Holding Time Errors (1271)

Blanks
- Field Blanks
- Detects in Lab Blanks (4)
- SDG's without Storage Blanks (0)
- SDG's without Method Blanks (0)

Duplicates
- Field and Interlab Duplicates
- Lab Duplicates with high RPDs (0)
- Duplicate Samples with incorrect or missing Parent Samples (0)
- Samples at the same Location/Depth/Time not specified as duplicates (0)

Surrogates
- Surrogate Variation > 30% or outside lab LCL or UCL (26)

Lab Control Samples
- SDG's without a Laboratory Control Sample (0)
- Laboratory Control Samples, Error > 30% (2)

Certified and Standard Reference Materials
- Certified Reference Materials - Error > 30% (0)

Matrix Spikes
- SDG's without a Matrix Spike (0)
- Trip Spikes with invalid Control Sample (0)
- Less than 1 matrix spike in 20 samples, or less than 1 matrix duplicate in 20 samples (0)
- Matrix Spike Recoveries less than 70% or greater than 130% or outside lab LCL or UCL (2)
- Trip Spike Recoveries (70% - 130% is acceptable) (12)

Inorganic
- Na + CL > TDS (0)
- BOD > COD (0)
- BOD > COD (0)

Other
- Unit Conversion Problems (0)
- OriginalChemNames Requiring Validation (0)
- Samples with no Results (0)
- Samples associated with Wells which are not specified in the Well Table (0)
- Aborted Analysis (0)
