		51

GROSS FLOOR AREA	
Level	Area
GROUND LEVEL (TOWER 2)	876.5 m²
LEVEL 1 (TOWER 2)	1200.1 m²
LEVEL 2 (TOWER 2)	1200.1 m²
LEVEL 3 (TOWER 2)	1192.1 m²
LEVEL 4 (TOWER 2)	778.1 m²
Grand total: 10	5247.0 m²

COMMON OPEN SPACE		
Name	Area	% of Site
C.O.S AREA	795.5 m²	0.25

DEEP SOIL AREA		
Name	Area	% of Site
DEEP SOIL AREA 5.8m wide	238.1 m²	7.48
DEEP SOIL AREA <3m wide	65.2 m²	2.05
DEEP SOIL AREA >3m wide	279.8 m²	8.79
DEEP SOIL AREA >6m wide	430.0 m²	13.51
	1013.1 m²	31.84

CAR SPACES REQUIRED	
4 Bed units: 1	2
3 Bed units: 12	24
2 Bed units: 32	32
2 Bed units Adaptable: 4	4
1 Bed units Adaptable: 2	2
Visitors (1/5)	10
Service vehicles (1/40)	2
Washing bay (1/50)	1
Grand total	77

CAR SPACES - TYPES	
Type	Number
Disabled - 2500w x 5400d	6
Service - 2500w x 5400d	2
Standard - 2500w x 5400d	60
Visitor - 2500w x 5400d	11
Washing - 3400w x 5400d	1
Grand total: 80	80
Bike	14

SHEET NAME: STATEMENT OF DESIGN & ENVIRONMENTAL EFFECTS

DRAWING NUMBER: DA04
ISSUE NO.: B

Compliance Schedule (SEPP65-2015 Apartment Design Guide - Design Criteria & Objectives)

	Design Criteria	Compliance	Design Proposal
3D-1	1. **Communal open space** has a minimum area equal to 25% of the site 2. Developments achieve a minimum of 50% **direct sunlight** to the principal usable part of the communal open space for a minimum of 2 hours between 9 am and 3 pm on 21 June (mid winter)	YES	There is a total combined Communal Open Space Area of 836m². As a percentage of the site, this equates to 26%. The location of the several areas at Ground provides great amenity and usefulness to the residents of the development.
3E-1	1. **Deep soil zones** are to meet the following minimum requirements: Site Area / Min. Dimension / Deep Soil Zone (% of site Area) <650m² / - / 7% 650m²-1,500m² / 3m >1,500m² / 6m	YES	There is a total combined Deep Soil Area of 972.9m². As a percentage of the site, this equates to 31%; exceeding the minimum requirement. The Deep Soil with a minimun dimension of 6m equals to 441.9m², 14% of the site
3F-1	**Separation between windows and balconies** is provided to ensure visual privacy is achieved. Min required separation distances from buildings to the side and rear boundaries are as follows: Building Height / Habitable rooms and balconies / Non-habitable rooms up to 12m (4 storeys) / 6m / 3m up to 25m (5-8 storey) / 9m / 4.5m over 25m (9+ storey) / 12m / 6m Gallery access circulation treated as habitable space when measuring privacy separation distances between neighbouring properties.	YES	Refer to Statement of Environmental Effects (SEE) for a detailed building separation summary
4A-1	1. Living rooms and private open spaces of at least 70% of apartments in a building receive a minimum of 2 hours **direct sunlight** between 9 am and 3 pm at mid winter in the Sydney Metropolitan Area and in the Newcastle and Wollongong local government areas. 3. A maximum of 15% of apartments in a building receive **no direct sunlight** between 9 am and 3 pm at mid winter	YES	A total of 36/51 apartments receive a minimum of 2 hours direct sunlight between 9am and 3pm at mid winter. This equates to 70.6%
4B-3	1. At least 60% of apartments are naturally cross ventilated in the first nine storeys of the building. Apartments at ten storeys or greater are deemed to be cross ventilated only if any enclosure of the balconies at these levels allows adequate natural ventilation and cannot be fully enclosed 3. Overall depth of a cross-over or cross-through apartment does not exceed 18m, measured glass line to glass line	YES N/A	A total of 34/51 apartments are naturally cross ventilated. This equates to 73% and well exceeds to minimum of 60%. Due to the nature of the design and creation of corner apartments, this will provide great amenity. There are no cross-over apartments in the proposed design.
4C-1	Measured from finished floor level to finished ceiling level, **minimum ceiling heights** are: Minimum ceiling height for apartment and mixed use buildings Habitable rooms / 2.7m Non-habitable / 2.4m For 2 storey apartments / 2.7m for main living area; 2.4m for second floor, where its area does not exceed 50% of the apt area.	YES	As we have allowed 3100mm between each level, all minimum ceiling heights can realistically be achieved. Additional to this, we have ensured that there are no wet areas located above habitable rooms.
4D-1	1. Apartments are required to have the following **minimum internal areas**: Apartment type / Minimum internal area Studio / 35m² 1 bedroom / 50m² 2 bedroom / 70m² 3 bedroom / 90m² The minimum internal areas include only one bathroom. Additional bathrooms increase the minimum internal area by 5m² each 2. Every habitable room must have a window in an external wall with a total **minimum glass area** of not less than 10% of the floor area of the room. Daylight and air may not be borrowed from other rooms.	YES	All minimum apartment sizes are achieved
4D-2	1. Habitable room depths are limited to a maximum of 2.5 x the ceiling height 2. In open plan layouts (where the living, dining and kitchen are combined) the maximum habitable room depth is 8m from a window	YES YES	All habitable room depths comply with the calculation (2.5 x ceiling height) All habitable room depths, with open plan layouts, are less than 8m from a window
4D-3	1. Master bedrooms have a minimum area of 10m² and other bedrooms to have 9m² (excluding wardrobe space) 2. Bedrooms have a minimum dimension of 3m (excl. wardrobe space) 3. Living rooms or combined living/dining rooms have a minimum width of: • 3.6m for studio and 1 bed apartments • 4m for 2 and 3 bedroom apartments	YES	All Master Bedrooms have a minimum area of 10m². In a majority of the apartments, the second bedroom is also 10m².
4E-1	1. All apartments are required to have **primary balconies** as follows: Dwelling type / Minimum area / Minimum depth Studio apartments / 4m² / - 1 bedroom apartments / 8m² / 2m 2 bedroom apartments / 10m² / 2m 3+ bedroom apartments / 12m² / 2.4m The minimum balcony depth to be counted as contributing to the balcony area is 1m. 2. For apartments at ground level or on a podium or similar structure, a private open space is provided instead of a balcony. It must have a minimum area of 15m² and a minimum depth of 3m	YES	All minimum primary balcony sizes are met. Refer to Sheets DA10-DA12 for details.
4F-1	1. The maximum number of apartments off a circulation core on a single level is eight 2. For buildings of 10 storeys and over, the maximum number of apartments sharing a single lift is 40	YES	There are two towers; each having their own circulation core. For each core, there are 7 apartments only.
4G-1	1. In addition to storage in kitchens, bathrooms and bedrooms, the following storage is provided: Apartment type / Storage size volume Studio / 4m³ 1 bedroom / 6m³ 2 bedroom / 8m³ 3+ bedroom / 10m³ At least 50% of the required storage is to be located within the apartment	YES	Refer to DA04

Design Statement (SEPP65-2015 SCHEDULE 1 - Design Quality Principles)

Principle 1: Context and Neighbourhood Character

The proposed development significantly contributes to the local context & character of the area. By providing a diverse range of apartment options which are affordable for a wider demographic of people, it not only assists with the densification issue currently within Sydney, but also provides social & economic benefits for the community. These include new businesses, improvement to environmental conditions ie. parks, roads (through contributions) and social interaction & participation in community events just to name a few.
The Landscaping strategy has been critically analysed to ensure that is not only enhances the existing character of the neighbourhood, but also the future character. If each development can do the same, it will create a continous green network of planting. By doing so, it will not only achknowledge the key built & natural features of the area, but also improve them.

Good design responds and contributes to its context. Context is the key natural and built features of an area, their relationship and the character they create when combined. It also includes social, economic, health and environmental conditions.

Responding to context involves identifying the desirable elements of an area's existing or future character. Well designed buildings respond to and enhance the qualities and identity of the area including the adjacent sites, streetscape and neighbourhood.

Consideration of local context is important for all sites, including sites in established areas, those undergoing change or identified for change.

Principle 2: Built Form and Scale

If you were to walk down Hope St. today, the local neighbourhood character is best summarised by single storey, detached residences with 1-2 buildings under construction. This however is not an accurate depiction of the future character of Hope St. Currently, 38-40 & 25-31 Hope St. are under construction, 12-14 Hope St has an approved DA & 26-30 & 32-36 Hope St. have DAs under review; all of which are six storey, residential flat buildings. With this in mind we made some critical design decisions to appropriately consider the future neighbourhood context.
The built form & public domaon are clearly defined with a central entry way & a row of canopy trees lining the site. To minimise visual & acoustic privacy issues, we located all of the private balcony areas to the North & South. This will provide a more desirable outlook and increase activation specifically to Hope St. All side & rear setback are generally compliant in order to reduce overshadowing on the surrounding properties. See 'Principle 9: Aesthetics' for further information.

Good design achieves a scale, bulk and height appropriate to the existing or desired future character of the street and surrounding buildings.

Good design also achieves an appropriate built form for a site and the building's purpose in terms of building alignments, proportions, building type, articulation and the manipulation of building elements.

Appropriate built form defines the public domain, contributes to the character of streetscapes and parks, including their views and vistas, and provides internal amenity and outlook.

Principle 3: Density

Housing affordability is a key issue within Sydney that affects both Individuals & Families. Increased supply of various housing options at an affordable price is key in dealing with the increased levels of densification.
The proposal aims to cater for a diverse number of individuals & families looking to get into the housing market. Located within walking distance to the Nepean hospital, it provides good potential renting posibilities for owners. Similarly, the number of jobs & community facilities within Penrith (and the greater region) continues to increase, not to mention the work being done on the local environment; specifically at the Nepean River. Both Penrith & Kingwood train stations are in close proximity to the development, as well as local buses which frequently operate along the Northern Rd (150m walk)

Good design achieves a high level of amenity for residents and each apartment, resulting in a density appropriate to the site and its context.

Appropriate densities are consistent with the area's existing or projected population. Appropriate densities can be sustained by existing or proposed infrastructure, public transport, access to jobs, community facilities and the environment.

Principle 4: Sustainability

As Penrith has a large temperature variation between Winter & Summer Solstice, the need to provide amenity through passive design was one of the key drivers for the proposal. By creating numerous corner apartments, it allows natural ventilation rather than mechanical heating or cooling. We have well exceeded the minimum requirement (87%) for cross ventilation in SEPP65.
Additional to this, we have ensured that over 70% of the apartments will have great access to daylight all year round. This will reduce the reliance on artificial lighting and in turn, energy.
On each level, we have provided a Bin Chute system with both Residual & Recycling options. This is amass within the waste rooms (Basement) and be collected multiple times throughout the week to ensure it is being dealt with responsively.

Good design combines positive environmental, social and economic outcomes.

Good sustainable design includes use of natural cross ventilation and sunlight for the amenity and liveability of residents and passive thermal design for ventilation, heating and cooling reducing reliance on technology and operation costs. Other elements include recycling and reuse of materials and waste, use of sustainable materials and deep soil zones for groundwater recharge and vegetation.

Principle 5: Landscape

We have worked closely with our Landscape Architect to ensure that the Landscape design achieves our intent. To improve the local context, neighbourhood character screen the building & connecting an existing green network, we propose a continous tree row of canopy trees. They will have a mature growth height of approximately 9m, which will asisst in bringing down the scale of the built form.
We have consciously created a large area of Deep Soil central to the proposal. This will allow us to have significant planting in that area; improving the amenity, useability & opportunity for Social Interaction in the Common Open Space. We want the Landscaping & Building to work together & compliment one another. To mitigate the level change along the Southern boundary, we have created a tiered planter with extensive planting.

Good design recognises that together landscape and buildings operate as an integrated and sustainable system, resulting in attractive developments with good amenity. A positive image and contextual fit of well designed developments is achieved by contributing to the landscape character of the streetscape and neighbourhood.
Good landscape design enhances the development's environmental performance by retaining positive natural features which contribute to the local context, co-ordinating water and soil management, solar access, micro-climate, tree canopy, habitat values and preserving green networks.
Good landscape design optimises useability, privacy and opportunities for social interaction, equitable access, respect for neighbours' amenity and provides for practical establishment and long term management.

Principle 6: Amenity

Providing greater than adequate amenity for the future inhabitants of the proposal is critically important to us. The shape and general arrangement of the apartments are efficient, spacious & a large majority allow for natural ventilation. Over 70% of the apartments will receive great access to sunlight all year round; reducing the requirements for artificial lighting.
To mitigate visual privacy concerns associated to building separation, we propose a variety of extruded elements which, when placed in the correct position, completely eliminate any privacy issues.
As we have carefully considerd the landscaping strategy, residents are generally screened by large canopy trees, which also contribute towards shielding the hot summer sun whilst providing another level of privacy/acoustic treatment to the surrounding context.

Good design positively influences internal and external amenity for residents and neighbours. Achieving good amenity contributes to positive living environments and resident well being.

Good amenity combines appropriate room dimensions and shapes, access to sunlight, natural ventilation, outlook, visual and acoustic privacy, storage, indoor and outdoor space, efficient layouts and service areas and ease of access for all age groups and degrees of mobility.

Principle 7: Safety

Residents enter through a central walkway through a secure, clearly defined access point & into the entry foyer. Not only will the main entry be adequately lit at night, the window provided for the each tower overlooks this area; encouraging passive surveillance at all times.
Similarly, the main Common Open Space is centrally located and can be viewed from the entry walkway & apartments either side. It was designed as a safe, quiet & relaxing space with extensive landscaping.

Many developments have a number of walkways & common spaces which are located at the rear of the building. From our experience, this is where residents feel most unsafe & uncomfortable. With this in mind, we eliminated this from our design & simply improved the size & amenity of the private terraces.

All of the public & private spaces are clearly defined and well integrated to the local neighbourhood.

Good design optimises safety and security within the development and the public domain. It provides for quality public and private spaces that are clearly defined and fit for the intended purpose. Opportunities to maximise passive surveillance of public and communal areas promote safety.

A positive relationship between public and private spaces is achieved through clearly defined secure access points and well lit and visible areas that are easily maintained and appropriate to the location and purpose.

Principle 8: Housing Diversity & Social Interaction

We have created two distinctively different Common Areas for the residents. We aim to encourage various methods of social interaction by creating two contrasting atmospheres. The central area is a meeting place; a place to read a book, meditate or simply switch off. The second area however is a space for running around and kicking a ball. By creating two different zones, it creates an opportunity for a diverse range of people to meet and converse the way they enjoy most. The facilities provided will suit both the existing & future social mix of the development.

There are a variety of apartment sizes in the development. They range from 52m² to 95m². Although a majority of the apartments are two bedrooms and approximately 80m², they vary significantly in terms of general arrangement, amenity, location and outlook.

Good design achieves a mix of apartment sizes, providing housing choice for different demographics, living needs and household budgets.
Well designed apartment developments respond to social context by providing housing and facilities to suit the existing and future social mix.

Good design involves practical and flexible features, including different types of communal spaces for a broad range of people and providing opportunities for social interaction among residents.

Principle 9: Aesthetics

Typically, the streetscape character of the area is predominantly individual, free standing houses. Now re-zoned & unrealistic for increased densification, we believe it is important to bring that character through in our facade treatment & overall building envelope.

Along Hope St, the proposal reads as four individual towers. This has been achieved by altering the scale, composition, colours & textures of each tower. The design similarly considers the internal layout & structure of the building as a priority to ensure amenity & functionaly is not sacrificed.

The East & West elevations have bee carefully considered. Using a variety of colours, horizontal & vertical elements, we have broken down the scale of the building and provided a suitable transition between the North & South facade differences.

Good design achieves a built form that has good proportions and a balanced composition of elements, reflecting the internal layout and structure. Good design uses a variety of materials, colours and textures.

The visual appearance of a well designed apartment development responds to the existing or future local context, particularly desirable elements and repetitions of the streetscape.
