1 Introduction

- 1.1 The following Arboricultural Impact Assessment Report is prepared for Penrith City Council. The report is an assessment of eight trees within Capella Street Reserve, Erskine Park.
- 1.2 The aim is to determine the tree's landscape significance, condition and vigour and provide appropriate development setbacks in accordance with AS4970-2009 whilst considering relevant tree and vegetation legislation.
- 1.3 The proposal entails subdivision of a section of the reserve to create two residential allotments on the north-eastern boundary. Seven trees are planted native species, while one tree is likely to be remnant of the original vegetation. There will be no impact, or the layout of the residential dwellings can be designed to accommodate five trees of medium retention value. Due to the layout of the subdivision, any proposed dwelling will be a major TPZ/SRZ encroachment and require the removal a high retention value tree. Two trees in irreversible decline are recommended for removal regardless of the subdivision.

2 Methodology

- 2.1 The trees were visually inspected from ground level to determine the crown condition, class, structural defects, decay, signs of stress, epicormic growth and dieback (refer Appendix A & B)
- 2.2 Useful Life Expectancy (ULE) was determined. A ULE rating provides an estimate of a tree's expected remaining life span and considers the current age, condition, vitality and life span of the species (refer Appendix B).
- 2.3 A Significance of a Tree Assessment Rating System (STARS) was determined. A STARS rating establishes the contribution of a tree to the overall landscape, amenity qualities or importance due to species, size, historical/cultural planting or significance to the site (refer Appendix C).
- 2.4 No root exploration, internal probing or aerial inspection was performed.
- 2.5 Tree height was measured with a Nikon Forestry Pro and rounded to the nearest metre. Canopy spread, and tree age were estimated. Diameter at Breast Height (DBH) and Diameter Above Root Buttress (DRB) were estimated.
- 2.6 The comments and recommendations in this report are based on findings from site inspections in October 2015 on 27 October 2021.
- 2.7 To maintain continuity tree numbers correspond to the Preliminary Arboricultural Assessment Report dated 10 November 2015 by Glenyss Laws.
- 2.8 A list of literature used in the preparation of this report is provided in the bibliography section.

- 2.9 Plans sighted in the preparation of the report include:
 - Plan of Detail and Levels dated 28/7/20 Version A by Richard Hogan and Company.
 - Engineering Plans Sheet No DA201 Issue A dated 14/12/21 by J Wyndham Prince
 - Flora and Fauna Assessment Capella Street, Erskine Park, dated 15/12/21 prepared by Eco Logical Australia.

3 Observations

3.1 The Site

3.1.1 The property is public reserve identified as Lot 2174, DP 776426, known as Capella Street Reserve, Erskine Park. The property is bounded by residential properties to the east, west and south (refer Figure 1).

Figure 1. Location Capella St Reserve, Erskine Park (Source NSW Six Maps https://maps.six.nsw.gov.au/)

3.2 The Trees

- 3.2.1 Details of the trees, their dimensions, condition, Useful Life Expectancy (ULE) and landscape significance (STARS) are attached in Appendix A.
- 3.2.2 Trees 1 11 assessed in the 2015 Preliminary Report were not plotted within the survey plan. The trees are setback > 50m to the proposed subdivision and therefore not assessed as part of this application.
- 3.2.3 Tree 14 has been removed since the 2015 site inspection.

Prepared by Glenyss Laws Consulting Arborist

4 Discussion

4.1 Tree Protection, Ecological and Heritage Significance

- 4.1.1 Tree Management Controls Penrith City Council applies under DCP 2014 and SEPP 2017 Vegetation in Non-Rural Areas and State Environmental Planning Policy No 19—Bushland in Urban Areas. The Tree Management Controls protect:
- Any native tree (both living and dead) or other vegetation that is on land zoned E2
 Environmental Conservation in the Penrith LEP 2010 Land Zoning Map, or on natural
 resources sensitive land identified in the Penrith LEP 2010 Natural Resources
 Sensitivity Land Map.
- In all areas, any native vegetation community including remnant native vegetation.
- In all areas, any tree or other vegetation whether native or introduced having a height of 3.5 metres or more or a trunk diameter exceeding 100mm at 1.4m above ground level.
- Any tree or other vegetation that is, or forms part of, a heritage item or is within a heritage conservation area.
- Any tree or other vegetation that is culturally, socially or biologically significant or a unique specimen and has been formally recognised by an appropriate government authority (e.g. a significant tree or vegetation register).
- 4.1.2 The reserve does not fall within a Heritage Conservation Area nor is the property listed as an item of heritage under Sheet HER 020 of LEP 2010.
- 4.1.3 The reserve is not identified as being of sensitive land within Council's LEP 2010 Natural Resources Sensitivity Land Map, Sheet NRL020.
- 4.1.4 The reserve is identified as being of biodiversity significance within the NSW Department of Planning, Industry and Environment Biodiversity Values Map (Refer Figure 2).

Figure 2. NSW Biodiversity Map (Source NSW Department of Planning Industry and Environment https://www.lmbc.nsw.gov.au/Maps/index.html?viewer=BOSETMap accessed 18/11/21).

Prepared by Glenyss Laws Consulting Arborist

4.2 Tree Retention Value and Landscape Significance

- 4.2.1 A tree's significance and retention value can be determined based upon several factors including size, condition and maturity coupled with the methodologies STARS and ULE.
- 4.2.2 Generally trees identified as having a medium to long ULE and of high landscape value, street trees and trees on adjoining properties are given a high priority for retention in the design process.
 - Tree 20 falls in this category
- 4.2.3 Trees identified with a medium landscape value together with a medium ULE are considered less critical and should be marked for retention where possible.
 - Trees 12, 13, 15, 16, 17 & 19 fall in this category
- 4.2.4 While trees assessed with a short ULE and a medium to low STARS value are unsuitable for retention and may be considered for removal.
 - Trees 15 & 18 fall in this category.

4.3 AS4970-2009 Protection of trees on development sites

- 4.3.1 Australian Standard 4970-2009, Protection of trees on development sites, provides appropriate guidelines to ensure the long-term viability and stability of trees to be retained on development sites.
- 4.3.2 Tree Protection Zones (TPZ) are based on the diameter of the tree measured at 1.4 metres above ground level x 12 (refer Table 1 for calculated TPZ's). The TPZ is a radial distance measured from the centre of the tree's trunk to the edge of proposed works. The TPZ is an exclusion zone where construction, trenching, soil level changes and use of machinery is avoided. Under AS4970 the minimum TPZ that can be applied is 2m and the maximum is 15m.
- 4.3.3 The Structural Root Zone (SRZ) is the area required for stability; a far larger area is necessary to maintain a viable tree. Therefore, **no** excavation or construction shall encroach within the SRZ (refer Table 1 for calculated SRZ's). The SRZ is determined adopting the formula from AS4970-2009 where the SRZ radius = (D x 50) ^{0.42} x 0.64. Where D = trunk diameter, in m, measured above the root buttress.
- 4.3.4 Under AS4970-2009 a minor encroachment of 10% of the area is allowable, provided this is compensated for elsewhere and adjacent to the TPZ. Should more than a 10% encroachment occur then the Project Arborist must demonstrate the trees longevity and viability can be maintained.
- 4.3.5 Under Clause 3.3.4 of AS4970 when determining the impacts of an encroachment into the TPZ, some consideration may be given to the following;
 - The potential loss of root mass resulting from the encroachment determined by root mapping (number, size and percentage)
 - Species tolerance to root disturbance
 - Age and vigour of the trees
 - or tree sensitive design construction such as pier and beam, suspended slab systems or discontinuous footings which may minimise the impact upon a tree's root system.

Prepared by Glenyss Laws Consulting Arborist

Tree No	DBH (cm)	DRB (cm)	TPZ Radius (m)	TPZ Area (m²)	SRZ Radius (m)
12	32	41	3.8	46	2.3
13	14	21	2.0	13	1.8
15	31	44	3.7	43	2.4
16	24	32	2.9	26	2.1
17	32	42	3.8	46	2.3
18	18	23	2.2	15	1.8
19	43	51	5.2	84	2.5
20	66	86	7.9	197	3.2

Table 1. Tree Protection and Structural Root Zones.

4.4 Proposed Subdivision Impacts

- 4.4.1 Tree 12, no regrading or stormwater drainage is proposed within the 3.8m TPZ.
- 4.4.2 Tree 13 is offset ~2.7m to the proposed residential boundary, no regrading or stormwater drainage is proposed within the 2.0m TPZ.
- 4.4.3 Tree 15 is in irreversible decline, the structural integrity of the tree is compromised due to the extent of decay in the root collar. Tree 15 is recommended for removal regardless of the proposal.
- 4.4.4 Tree 16 falls on the boundary of proposed Lot 1, a 2.9m TPZ applies. Regrading is proposed offset at ~3.0m, subsequently there will be no encroachment from the engineering works. The tree can be retained provided adequate building line setbacks are provided.
- 4.4.5 Tree 17 a 3.8m TPZ applies no regrading, stormwater drainage or development is proposed within the TPZ.
- 4.4.6 Tree 18 is an overmature specimen in irreversible decline and is recommended for removal.
- 4.4.7 Tree 19 a 5.2m TPZ applies. No regrading or stormwater drainage is proposed within the TPZ. Provided adequate building line setbacks are afforded it will be feasible to retain Tree 19 as part of the residential development.
- 4.4.8 Tree 20 a 7.9m TPZ applies, due to the tree's location within context to Lot 1, any future building footprint will constitute a major TPZ/SRZ encroachment.

5 Conclusions/Recommendations

- 5.1 Eight (8) trees within Capella Street Reserve were assessed. The proposal seeks to subdivide the reserve to create two residential allotments on the north eastern boundary.
- 5.2 Seven of the trees are planted native species, one tree assessed with a high landscape significance is likely to be remnant of the original vegetation.
- 5.3 The land falls within an area of Biodiversity Significance within the NSW Department of Planning, Industry and Environment Biodiversity Values Map.
- 5.4 There will be no impact within the TPZ as a result of the regarding and external stormwater design. The residential layout and associated underground services can be designed to accommodate a minor and acceptable encroachment to five trees assessed as less critical for retention (refer Table 2).

High Retention	Less Critical for Retention	Low Retention
-	12, 13, 16, 17 & 19	-

Table 2. Trees which may be retained

5.5 The subdivision and probable building footprint will constitute a major TPZ encroachment to one high retention value tree, while two trees low retention value specimens are recommended for removal regardless of the development.

High Retention	Less Critical for Retention	Low Retention		
20	-	15 & 18		

Table 3. Trees which will require removal.

- 5.6 Appropriate setbacks to guide the underground services, residential and landscape plans are provided in Table 1 of the report.
- 5.7 The retain trees shall be protected in accordance with the following Arboricultural Method Statement and Tree Management Plan.

6 Arboricultural Method Statement

6.1 Pre-commencement and Arboricultural Hold Points

- 6.1.1 Prior to demolition and construction works, a Project Arborist shall be appointed to supervise all tree protection procedures detailed in this statement. The Project Arborist shall have a minimum level 5 AQF qualification in Arboriculture.
- 6.1.2 A pre-commencement site meeting shall take place between the Project Manager and the Project Arborist, the meeting is to take place before any development activity to determine specific arboricultural inspections and required tree protection.
- 6.1.3 Development Stage is subject to site monitoring by the Project Arborist at intervals as agreed at the pre-commencement site meeting. These visits are to ensure the protection measures are maintained in good order and works within the Tree Protection Zone (TPZ) meet with this Arboricultural Method Statement and AS4970.
- 6.1.4 It is the responsibility of the Project Manager to provide a minimum 3 days' notice to the Project Arborist for the pre-determined witness points.
- 6.1.5 Any breaches to the Arboricultural Method Statement shall be reported immediately.

Prepared by Glenyss Laws Consulting Arborist

6.1.6 The following pre-determined stages are Project Arborist hold points to document the works and demonstrate an inspection has taken place.

Hold Point	Action	Project Arborist Supervision
Tree Protection	The Site Arborist shall inspect the Tree Protection Fencing and any necessary Ground Protection complies with Appendix E & F and section 6.2.	Inspected, documented & certified by Project Arborist
Machinery Access	An access route for machinery shall be determined prior to construction works. Any temporary ground protection within the Tree Protection Zones shall be undertaken as per Appendix E & F and section 6.2	Inspected, documented & certified by Project Arborist
Demolition Works	The Site Arborist shall be in attendance during the removal of any existing structures within the TPZ of retained trees.	Inspected, documented & certified by Project Arborist
Earth Works	The Site Arborist to monitor any earthworks within the TPZ's. Note these works must be undertaken by hand or with an air knife.	Inspected, documented & certified by Project Arborist
Practical Completion	The Site Arborist to inspect and assess the trees condition and provide certification of tree protection at all the above-mentioned Hold Points.	Inspected, documented & certified by Project Arborist

Table 4. Hold Points for Project Arborist Inspections

6.2 Tree Protection – to be installed prior to commencement of works

- 6.2.1 Tree Protection Fencing shall be installed prior to commencement of works and be maintained in a good condition during the construction processes.
- 6.2.2 Tree Protection shall consist of a 1.8m high chain link temporary fencing erected at the distances nominated in Appendix F Tree Protection Plan.
- 6.2.3 Weatherproof signage indicating the area is a Tree Protection Zone (TPZ) shall be displayed on the fence line at 10m intervals. Signage shall be a minimum A4 and state No Access Tree Protection Zone and include the contact details of the Project Manager and Project Arborist.
- 6.2.4 Once erected, the TPF shall be regarded as sacrosanct and shall not be removed or altered without prior agreement of the project arborist.
- 6.2.5 Attention shall be given to ensuring the TPZ remains rigid and complete and excludes all construction activity and storage of materials.
- 6.2.6 If works occur within the TPZ the Project Arborist shall determine if appropriate ground protection is required. Ground protection shall consist of a layer of geotextile fabric spread with a 100mm layer of fine woodchip mulch and overlaid with thick recycled railway sleepers, timber planks or steel plates in accordance Appendix F.
- 6.2.7 Mulch shall be spread within the TPZ's of the retained trees or as instructed by the Project Arborist. The mulch shall consist of mixed leaf and fine woodchip mulch as certified to AS4454:2012 Composts, Soil Conditioners and Mulches. Mulch shall be spread to a depth of 75mm and maintained at this depth for the duration of works.

6.3 Restricted Activities

- 6.3.1 The following activities are restricted within the Tree Protection Zone:
 - Parking of vehicles or plant
 - Installation of temporary site offices or amenities.
 - Wash down areas
 - No mechanical excavation
 - Preparation of chemicals including paint, cement or mortar.
 - Vehicular movement
 - Pedestrian access
 - Excavation, trenching or tunnelling unless under the supervision of the Project Arborist
 - No ground level changes are permitted

6.4 Installation of Services

- 6.4.1 Where feasible, all underground services will be routed & installed beyond the identified TPZ's. Where it is impossible to divert services beyond the TPZ's, detailed plans showing the proposed routing will be drawn in conjunction with advice from an AQF Level 5 Arborist.
- 6.4.2 The method for trenching within a TPZ shall either be by hand methods e.g. hand digging with a spade or trowel or an air spade. Trenchless technology such as directional underground boring shall be considered in the first instance.
- 6.4.3 Topsoil and subsoil excavated from the trench shall be deposited into separate piles and kept apart and covered until required for backfilling.
- 6.4.4 No roots > 30mm in diameter are to be severed without prior agreement with the Project Arborist.
- 6.4.5 In cases of extreme heat or unless the trench is to be backfilled within the same day, all exposed roots > 30mm in diameter shall be wrapped with damp hessian to prevent drying out.
- 6.4.6 Where is it necessary to sever any woody roots, they shall be clean cut with secateurs or a pruning saw.
- 6.4.7 The underground services shall be positioned below the network of protected roots without causing damage to roots > 30mm in diameter. The hessian shall be removed prior to backfilling.

6.5 Back filling

6.5.1 Once works have been completed, backfilling shall be undertaken by hand using the subsoil first. The subsoil shall be filled into the trench in layers of no > 20cm and each layer shall be gently consolidated. Once the subsoil has reached the level of the existing subsoil, the topsoil shall be placed on top until the original levels are reached.

6.6 Construction of masonry fences and retaining walls

- 6.6.1 Where retaining walls or masonry fences are proposed, exploratory hand excavation to a depth of 600mm will determine the presence of any woody roots > 30mm in diameter. Exploratory trenching shall be under the supervision of and documented by the Project Arborist.
- 6.6.2 In cases of extreme heat or unless the footings are to be backfilled within the same day, then the exposed roots shall be covered in damp hessian until back filling takes place.
- 6.6.3 Backfill shall be undertaken in accordance with section 6.5 of the method statement.

6.7 Soft and Hard Landscaping

- 6.7.1 Installation of soft or hard landscaping including paving, turf or plant material within the TPZ shall be undertaken by hand.
- 6.7.2 Planting holes are to be hand dug with a shovel or garden trowel.

6.8 Breach of tree protection

- 6.8.1 Any above or below ground damage (including soil compaction) to a protected tree shall be reported to the Project Arborist immediately.
- 6.8.2 Where activities occur which breach the tree protection measures, the Project Arborist shall be advised immediately and work within the TPZ be halted until an assessment has been made and any mitigation measures deemed necessary have been undertaken.

Any questions relating to this arborist report should be directed to the undersigned.

Glenyss Laws

Graduate Certificate in Arboriculture, The University of Melbourne (AQF Level 8)
Diploma of Horticulture (Arboriculture) TAFE NSW (AQF Level 5)
Assoc Diploma Applied Science (Landscape) TAFE NSW

Assumptions/Disclaimer

Care has been taken to obtain all information from reliable sources. All data has been verified as far as possible. However, Glenyss Laws – Consulting Arborist can neither guarantee nor be responsible for the accuracy of information provided by others.

Unless stated otherwise:

- Information contained in this report covers only the trees that were examined and reflects the condition of the trees at the time of inspection: and
- The inspection was limited to visual examination of the subject trees without dissection, probing or coring.
- No risk assessment was commissioned or carried out as part of the investigation.
- Trees are living organisms whose health and condition can change rapidly. Any changes to the soil surrounds e.g. excavation or construction works or extreme weather events will invalidate this report.
- There is no warranty or guarantee, expressed or implied, that problems or deficiencies of the subject trees
 may not arise in the future.
- Any tree, whether it has a visible weakness or not, will fail if the forces applied exceed the strength of the tree or its parts.

APPENDIX ATree Survey Notes

Tree No	Tree Species	Age Class	DBH (mm)	DRB (mm)	Tree height (M)	Crown diameter (M)	Crown Condition	Crown Class	STARS	ULE	Root Zone/ Defects/ Services	Comments
12	Eucalyptus sideroxylon (Red Ironbark)	M	320	410	15	7	3	С	2	2	Gr,C/-/-	Forms two leaders at 2m union appears sound. Planted native species.
13	Corymbia maculata (Spotted Gum)	M	140	210	7	3	3	Partial S	2	2	Gr,C/-/-	Moderate infestation of borer and associated wound in basal area 30cm x 20cm. Planted specimen
14	Removed since 2015 inspection											
15	Corymbia maculata (Spotted Gum)	M	310	440	18	7	3	С	3	4	Gr C/B, W/-	Heavy infestation of borer and associated wounding extends into root crown. There is substantial decay in the basal area (refer Appendix D). Recommend tree removal.
16	Corymbia maculata (Spotted Gum)	M	240	320	11	7	3	С	2	2	Gr,C/B/-	Planted specimen
17	Corymbia maculata (Spotted Gum)	M	320	420	16	7	4	С	2	2	Gr,C/B/-	Planted specimen
18	Corymbia maculata (Spotted Gum)	О	180	230	9	2	1	S	3	4	Gr,C/B/-	Planted specimen
19	Corymbia maculata (Spotted Gum)	M	430	510	19	8	4	С	2	1	E,Gr,C/-/-	Planted specimen
20	Eucalyptus moluccana (Grey Box)	M	280 & 590	860	17	11	3	D	1	1	Gr,C/-/-	Moderate infestation of psyllids. Likely remnant of the original vegetation.

Trees in Green assessed with a high landscape value coupled with a medium to long ULE are allocated a high priority for retention.

Prepared by Glenyss Laws Consulting Arborist

Trees in Blue are assessed as less critical for retention, their retention should be a priority with removal considered if all design options have been exhausted & adversely affecting the proposal.

Trees in Pink are of low retention value, nor require special works or design modifications to be implemented.

Tree in Orange are considered hazardous, in irreversible decline or environmental weed species and recommended for removal irrespective of development.

APPENDIX B

Notes on tree inventory schedule

Tree No: Relates to number on site diagram.

Species: Botanical and Common Name

Age Class: Y Young- recently planted

Semi mature- <20% of life expectancy
 Mature- 20-80% of life expectancy
 Over mature- >80% of life expectancy

Height: In metres

Crown Spread: In metres

Crown Class: D Dominant Crown extends above general

canopy; not restricted by other trees.

C Co-dominant Crown forms the bulk of the general

Canopy but crowded by other trees.

Intermediate Crown extends into dominant/

codominant canopy but quite crowded

on all sides.

S Suppressed Crown development restricted from

Overgrowing trees.

Crown Condition: Overall vitality

0 Dead

1 Severe decline (<20% canopy density; major dead wood)

2 Declining (20-60% canopy density; twig and branch dieback)

Average/ low vigour (60-90% canopy density; twig dieback)
Good (90-100% canopy density; little or no dieback or other

problems)

5 Excellent (100% canopy density; no deadwood or other

problems)

STARS: Significance of a Tree Assessment Rating System (copyright Institute

of Australian Consulting Arborists 2010)

ULE: Useful Life Expectancy adapted from Barrell J (2001)

1	Long ULE	Trees that appear to be retainable at the time of assessment for more than 40 years
2	Medium ULE	Trees that appear to be retainable at the time of assessment for more than 15-40 years
3	Short ULE	Trees that appear to be retainable at the time of assessment for more than 5-15 years
4	Remove	Trees that should be removed within the next 5 years
5	Small, young or regularly pruned	Small trees less than 5 metres in height or young trees less than 15 years old but over 5 metres in height.

APPENDIX C

IACA Significance of a Tree, Assessment Rating System (STARS) © (IACA 2010) ©

In the development of this document IACA acknowledges the contribution and original concept of the Footprint Green Tree Significance & Retention Value Matrix, developed by Footprint Green Pty Ltd in June 2001.

The landscape significance of a tree is an essential criterion to establish the importance that a particular tree may have on a site. However, rating the significance of a tree becomes subjective and difficult to ascertain in a consistent and repetitive fashion due to assessor bias. It is therefore necessary to have a rating system utilising structured qualitative criteria to assist in determining the retention value for a tree. To assist this process all definitions for terms used in the *Tree Significance - Assessment Criteria* and *Tree Retention Value - Priority Matrix*, are taken from the IACA Dictionary for Managing Trees in Urban Environments 2009.

This rating system will assist in the planning processes for proposed works, above and below ground where trees are to be retained on or adjacent a development site. The system uses a scale of *High*, *Medium* and *Low* significance in the landscape. Once the landscape significance of an individual tree has been defined, the retention value can be determined. An example of its use in an Arboricultural report is shown as Appendix A.

Tree Significance - Assessment Criteria

1. High Significance in landscape

- The tree is in good condition and good vigour;
- The tree has a form typical for the species;
- The tree is a remnant or is a planted locally indigenous specimen and/or is rare or uncommon in the local area or of botanical interest or of substantial age;
- The tree is listed as a Heritage Item, Threatened Species or part of an Endangered ecological community or listed on Councils significant Tree Register;
- The tree is visually prominent and visible from a considerable distance when viewed from most directions within the landscape due to its size and scale and makes a positive contribution to the local amenity;
- The tree supports social and cultural sentiments or spiritual associations, reflected by the broader population or community group or has commemorative values:
- The tree's growth is unrestricted by above and below ground influences, supporting its ability to reach dimensions typical for the taxa *in situ* tree is appropriate to the site conditions.

2. Medium Significance in landscape

- The tree is in fair-good condition and good or low vigour;
- The tree has form typical or atypical of the species;
- The tree is a planted locally indigenous or a common species with its taxa commonly planted in the local area
- The tree is visible from surrounding properties, although not visually prominent as partially obstructed by other vegetation or buildings when viewed from the street,
- The tree provides a fair contribution to the visual character and amenity of the local area,
- The tree's growth is moderately restricted by above or below ground influences, reducing its ability to reach dimensions typical for the taxa *in situ*.

3. Low Significance in landscape

- The tree is in fair-poor condition and good or low vigour;
- The tree has form atypical of the species;
- The tree is not visible or is partly visible from surrounding properties as obstructed by other vegetation or buildings,
- The tree provides a minor contribution or has a negative impact on the visual character and amenity of the local area,
- The tree is a young specimen which may or may not have reached dimension to be protected by local Tree Preservation orders or similar protection mechanisms and can easily be replaced with a suitable specimen,
- The tree's growth is severely restricted by above or below ground influences, unlikely to reach dimensions typical for the taxa in situ tree is inappropriate to the site conditions,
- The tree is listed as exempt under the provisions of the local Council Tree Preservation Order or similar protection mechanisms,
- The tree has a wound or defect that has potential to become structurally unsound.

Environmental Pest / Noxious Weed Species

- The tree is an Environmental Pest Species due to its invasiveness or poisonous/ allergenic properties,
- The tree is a declared noxious weed by legislation.

Hazardous/Irreversible Decline

- The tree is structurally unsound and/or unstable and is considered potentially dangerous,
- The tree is dead, or is in irreversible decline, or has the potential to fail or collapse in full or part in the immediate to short term.

The tree is to have a minimum of three (3) criteria in a category to be classified in that group.

Note: The assessment criteria are for individual trees only, however, can be applied to a monocultural stand in its entirety e.g. hedge.

Est	Dead								
<u>Legend</u>	for Matrix A	<u>ssessment</u>							
	Priority for Retention (High) - These trees are considered important for retention and should be retained and protected. Design modification or re-location of building/s should be considered to accommodate the setbacks as prescribed by the Australian Standard AS4970 <i>Protection of trees on development sites</i> . Tree sensitive construction measures must be implemented e.g. pier and beam etc if works are to proceed within the Tree Protection Zone.								
	Consider for Retention (Medium) - These trees may be retained and protected. These are considered less critical; however, their retention should remain priority with removal considered only if adversely affecting the proposed building/works and all other alternatives have been considered and exhausted.								
	Consider for Removal (Low) - These trees are not considered important for retention, nor require special works or design modification to be implemented for their retention.								
		y for Removal - TI d irrespective of develop		red hazardous, or in ir	reversible decline, or w	reeds and should be
