## Waste Management Plan

### 1. Introduction

This plan has been provided to implement our procedures which will be in keeping with the State Government's policy of reducing the quantity of materials that goes into land fill and current EPA guidelines.

### 2. Materials to be Recovered

Residential house, timber framed. Will be recovered, loaded onto specialised house relocation equipment and transported away from site by McDonald Contracting. The house will be hydraulically elevated onto our trailers and transported off site to a property as determined by McDonald Contracting within NSW. Minimal waste will be generated i.e. small amount of general waste inside the building. Approximately 2 cubic metres which will be sent by skip waste disposal. The brick piers and concrete path will also be removed and taken to the appropriate waste disposal unit.

### 3. Materials to Landfill

The following list of materials have been identified on site as being those which will go to land fill as neither the infrastructure nor markets are in place to provide a practical or economical recovery;

abn | 87 092207737

We anticipate approximately 2 tonnes (2 cubic metres) of material to be sent to landfill. Transport will be made by skip bin waste disposal and will be disposed at a licensed landfill site at Eastern Creek.

#### 4. Recovery Plan

Materials to be recovered will be treated in the following manner;

Represents a 100% recycling matter for the house.

#### 5. Summary

The House relocation project will deliver the following overall waste quantities during the building relocation phase of works;

Recycle House	30 tonne	60%
Recycle Rubble	23 tonne	36%
Waste	2 tonne	4%
