This Report (which includes all attachments and annexures) has been prepared by EIS for the Client, and is intended for the use only by that Client.

This Report has been prepared pursuant to a contract between EIS and the Client and is therefore subject to:

- a) EIS proposal in respect of the work covered by the Report;
- b) The limitations defined in the client's brief to EIS; and
- c) The terms of contract between EIS and the Client, including terms limiting the liability of EIS.

If the Client, or any person, provides a copy of this Report to any third party, such third party must not rely on this Report, except with the express written consent of EIS which, if given, will be deemed to be upon the same terms, conditions, restrictions and limitations as apply by virtue of (a), (b), and (c) above.

Any third party who seeks to rely on this Report without the express written consent of EIS does so entirely at their own risk and to the fullest extent permitted by law, EIS accepts no liability whatsoever, in respect of any loss or damage suffered by any such third party.

EXECUTIVE SUMMARY

Richard Crookes Constructions, acting on behalf of Group GSA ('the client'), commissioned Environmental Investigation Services (EIS)¹ to re-assign the Preliminary Environmental Site Assessment (ESA) report prepared for the proposed new school development at 14-28 Cullen Avenue, Jordan Springs, NSW. The site location and features are shown on Figure 1 and Figure 2 respectively. The proposed development area is referred to as 'the site' in this report. The ESA was initially commissioned by Hayball.

The re-assignment is made on the basis that the conditions under which the original work was undertaken are unequivocally transferred with the re-assigned report. The original proposal, scope of work and standard terms and conditions are attached in the appendices

Based on the details provided, EIS understand that the proposed development includes the construction of a new school over the south eastern portion of the site. This will include a hall, library, classrooms, administration building, sports courts and a staff car park. It is anticipated that the northern areas will largely be open space.

The primary aims of the assessment were to identify past or present potentially contaminating activities at the site, identify the potential for site contamination, assess the need for further investigation, and make a preliminary assessment of the suitability of the site for the proposed development. The assessment objectives were to:

- Provide an appraisal of the past site use(s) based on a review of historical records;
- Assess the current site conditions and use via a site walkover inspection;
- Identify potential contamination sources/areas of environmental concern (AEC) and contaminants of potential concern (CoPC);
- Prepare a conceptual site model (CSM); and
- Assess whether an intrusive investigation is required.

The scope of work included: review of site information, including background and site history information from a Lotsearch Pty Ltd *Environmental Risk and Planning Report*; a walkover site inspection; and preparation of an ESA report presenting the results of the assessment, including a CSM.

Based on the scope of work undertaken for this assessment, EIS identified the following potential contamination sources/AEC:

- Fill (either imported, or locally sourced);
- Fuel storage;
- Use/storage of pesticides; and
- Hazardous building materials.

Considering the above, and based on a qualitative assessment of various lines of evidence as discussed throughout this report, EIS are of the opinion that there is a low to moderate potential for site contamination.

The site appeared to have been used for defence purposes which is listed in Table 1 of the SEPP55 Planning Guidelines as an activity that may cause contamination. On this basis, and considering the sensitivity of the proposed land use (i.e. a primary school), a Stage 2 investigation would typically be required. However, given the recent subdivision works and the information provided by Lendlease, the site may have already been investigated and remediated.

EIS are of the opinion that the historical land uses and potential sources of contamination identified would not preclude the proposed development. The following is recommended to better assess the risks:

- All historical reports relevant to site contamination assessment and remediation should be obtained and reviewed. Following the review, an assessment should be made as to whether further investigation is warranted (or required in order to obtain development consent); and
- A preliminary site investigation should be designed and implemented (if required) based on the outcome
 of the review.

Document Set ID: 8586770 Version: 1, Version Date: 22/02/2019

 $^{^{\}rm 1}$ Environmental consulting division of Jeffery & Katauskas Pty Ltd (J&K)

Considering the findings of the assessment, EIS are of the opinion that the site can be made suitable for the proposed development subject to the appropriate implementation of the recommendations.

The conclusions and recommendations should be read in conjunction with the limitations presented in the body of the report.

Document Set ID: 8586770 Version: 1, Version Date: 22/02/2019

1 INTRODUCTION

Richard Crookes Constructions, acting on behalf of Group GSA, commissioned Environmental Investigation Services (EIS) to re-assign the Preliminary Environmental Site Assessment (ESA) report prepared for the proposed new school development at 14-28 Cullen Avenue, Jordan Springs, NSW. The site location and features are shown on Figure 1 and Figure 2 respectively. The proposed development area is referred to as 'the site' in this report. The ESA was initially commissioned by Hayball.

The re-assignment is made on the basis that the conditions under which the original work was undertaken are unequivocally transferred with the re-assigned report. The original proposal, scope of work and standard terms and conditions are attached in the appendices.

A geotechnical investigation was undertaken in conjunction with this assessment by JK Geotechnics². The results of the investigation are presented in a separate report (Ref: 30718Zrpt)³.

1.1 Proposed Development Details

Based on the details provided, EIS understand that the proposed development includes the construction of a new primary school over the south eastern portion of the site. This will include a hall, library, classrooms, administration building, sports courts and a staff car park. It is anticipated that the northern areas will largely be open space/playing field.

1.2 <u>Aim and Objectives</u>

The primary aims of the assessment were to identify past or present potentially contaminating activities at the site, identify the potential for site contamination, assess the need for further investigation, and make a preliminary assessment of the suitability of the site for the proposed development. The assessment objectives were to:

- Provide an appraisal of the past site use(s) based on a review of historical records;
- Assess the current site conditions and use via a site walkover inspection;
- Identify potential contamination sources/areas of environmental concern (AEC) and contaminants of potential concern (CoPC);
- Prepare a conceptual site model (CSM); and
- Assess whether an intrusive investigation is required.

1.3 Scope of Work

The assessment was undertaken generally in accordance with an EIS proposal (Ref: EP43202KP2) of 31 August 2016 and written acceptance from Hayball of 14 June 2017. The re-assignment was undertaken in accordance with EIS proposal EP48789P and the acceptance by Richard Crookes Constructions dated 22 January 2019.

² Geotechnical consulting division of J&K

³ Referred to as JK 2017 Report

The scope of work included the following:

- Review of site information, including background and site history information from a Lotsearch Pty Ltd *Environmental Risk and Planning Report*;
- A walkover site inspection; and
- Preparation of an ESA report presenting the results of the assessment, including a CSM.

The report was prepared with reference to regulations/guidelines outlined in the table below. Individual guidelines are also referenced within the text of the report.

2 SITE INFORMATION

2.1 Site Identification

Table 2-1: Site Identification

Site Address:	14-28 Cullen Avenue, Jordan Springs, NSW
Lot & Deposited Plan:	Part of Lot 22 DP1194338
Current Land Use:	Vacant Land
Proposed Land Use:	School
Local Government Authority (LGA):	Penrith City Council
Current Zoning:	Unknown*
Site Area (m²):	29,950m²
RL (AHD in m) (approx.):	40-42m
Geographical Location (decimal degrees) (approx.):	Latitude: -33.725027 Longitude: 150.727053

^{*}Note - Current zoning not identified with the Penrith City Council LEP or the SEPP (Sydney Region Growth Centres) 2006.

2.2 Site Location and Regional Setting

The site is located to the north of Cullen Avenue and is in a predominantly new residential area of Jordan Springs.

2.3 Topography

The regional topographic setting is gently undulating with the site sloping slightly away to the north east and south west from its centre at a gradient of approximately 1-2°.

2.4 Site Inspection

A walkover inspection of the site was undertaken by EIS on 27 July 2017. The inspection was limited to accessible areas of the site and immediate surrounds. At the time of the inspection, the majority of site was vacant land. A site compound consisting of two demountable site sheds occupied by 'Landscape Solutions' was located along the southern boundary. An internal inspection of the site sheds was not undertaken. A summary of the other inspection findings are outlined in the following subsections:

EIS Ref: E30718KPrpt-rev1

2.4.1 Boundary Conditions, Soil Stability and Erosion

The site was bound by metal fencing along the western and northern boundaries and metal wire fencing along the eastern and southern boundaries. Some minor erosion of exposed soil was visible along the eastern boundary.

2.4.2 Visible or Olfactory Indicators of Contamination

No visible or olfactory (i.e. odours) indicators of contamination were identified at the time of the inspection.

2.4.3 Presence of Drums/Chemicals, Waste and Fill Material

Bulk storage of chemicals was not observed during the site inspection. There was considered to be a potential for the storage of small quantities of petrol or other chemicals within the site sheds.

Several small stockpiles were identified to the north-east of the site compound (as shown on Figure 2). The stockpiles were of small volumes (i.e. less than 1 tonne) and made up of imported gravelly material.

A large elongated stockpile of excavated soil was identified along the western boundary shared with the 'Little Zacs' child care centre (as shown on Figure 2). The material appeared to have been excavated from along the boundary and stockpiled adjacent the excavation.

2.4.4 Drainage and Services

Considering the topography, surface water runoff was assumed to flow away from the centre of the site towards the north-east and south-west. Two (2) sewer pit covers were located along the southern boundary (as shown on Figure 2).

2.4.5 <u>Sensitive Environments</u>

Sensitive environments such as wetlands, ponds, creeks or extensive areas of natural vegetation were not identified on site. A small storm water channel with landscaped vegetation was observed running north to south approximately 30m east of the site.

2.4.6 <u>Landscaped Areas and Visible Signs of Plant Stress</u>

The majority of the site was grassed and had been cleared of any significant vegetation.

2.5 Surrounding Land Use

The site was generally surrounded by roads, new residential areas and light commercial land use. EIS did not observe any land uses in the immediate surrounds that were identified as potential contamination sources for the site.

Preliminary Environmental Site Assessment 14-28 Cullen Avenue, Jordan Springs, NSW EIS Ref: E30718KPrpt-rev1

2.6 Anecdotal Information

During the site induction conducted by Lendlease, the Lendlease representative noted that the site (and/or the broader subdivision area) had been remediated. Reference was made to a former brick kiln and unexploded ordnance. Further information was not provided.

EIS Ref: E30718KPrpt-rev1

3 GEOLOGY AND HYDROGEOLOGY

3.1 Regional Geology

Regional geological information presented in the Lotsearch report (attached in the appendices) indicated that the site is underlain by Bringelly Shale of the Wianamatta Group, which typically consists of shale, carbonaceous claystone, claystone, laminite, fine to medium grained lithic sandstone, rare coal and tuff.

3.2 Acid Sulfate Soil Risk and Planning

The site is not located in an acid sulfate soil (ASS) risk area.

3.3 **Hydrogeology**

Hydrogeological information presented in the Lotsearch report (attached in the appendices) indicated that the regional aquifer on-site and in the areas immediately surrounding the site includes porous, extensive highly productive aquifers. There was a total of one (1) registered bore within the report buffer of 2,000m. The bore is located approximately 1,808m north-west of the site and is registered for recreation purposes. The drillers log identified clay/gravel to a depth of 13.5m underlain by shale and sandstone bedrock. The standing water level in the bore was 45.0m below ground level.

The information reviewed for this assessment indicated that the subsurface conditions at the site are expected to consist of erosional soils overlying relatively deep bedrock. The site will be connected to the mains water supply and use of groundwater is not anticipated as part of the development.

3.4 Receiving Water Bodies

The site location and regional topography indicates that excess surface water flows have the potential to enter the stormwater channel located approximately 30m east of the site. This stormwater channel discharges into a large manmade dam/water body approximately 100-150m to the south of the site. This water body could be a potential receptor.

4 SITE HISTORY INFORMATION

4.1 Review of Historical Aerial Photographs

Historical aerial photographs were included in the Lotsearch report (attached in the appendices). EIS has reviewed the photographs and summarised relevant information in the following table:

Table 4-1: Summary of Historical Aerial Photographs

Year	Details
1955	The site appeared to be mostly vacant and grassed. Tracks and man-made features were visible in western section of the site. A large dam was visible in the north-east corner of the site.
	Small buildings and tracks were visible in the immediate surrounds. Excavated areas and filled mounds were visible across the site and surrounds which indicated possible military land use.
1961	The site and immediate surrounds appeared generally similar to the 1955 photograph. The mounds around buildings and tracks appeared more pronounced.
1965	The photograph was of poor quality. The site appeared generally similar to the 1961 photograph.
	Several large elongated mounds were visible immediately to the west and south of the site. Additional mounds were also visible around the damn in the north east corner of the site and surrounding buildings. The presence of the elongated mounds indicated possible ongoing military use.
1970	The site and immediate surrounds appeared generally similar to the 1965 photograph.
1982	The site appeared generally similar the 1970 photograph.
	A large damn was visible immediately to the south east of the site with a large mound visible along the southern perimeter of the dam.
1991	The photograph was of poor quality. The site and immediate surrounds appeared generally similar to the 1982 photograph.
2002	The dam in the north east corner of the site was no longer visible. The remainder of the site appeared generally similar to the 1991 photograph.
	The small buildings were no longer visible surrounding the site. The mounds and tracks were still visible.
2009	The site and immediate surrounds appeared generally similar to the 2002 photograph. Increase tree and vegetation coverage was now visible indicating the site had been vacated.
2014	The site appeared similar to the present day.

Year	Details				
	The 'Little Zacs' child care centre was not visible adjacent the site, however the remaining surrounds appeared generally similar to the present day.				

4.2 NSW EPA Records

The Lotsearch report (attached in the appendices) included information from the NSW EPA databases for the following:

- Records maintained in relation to contaminated land under Section 58 of the CLM Act 1997;
- Records of notified sites under Section 60 of the CLM Act 1997 (Duty to Report Contamination);
 and
- Licensed activities under the Protection of the Environment Operations Act (1997)¹⁰.

The search included the site area and surrounding areas in the report buffer of 1,000m. The search indicated the following:

- There were no records for the site or any properties in the report buffer under Section 58 of the CLM Act 1997;
- The site has not been notified with regards to the Duty to Report Contamination under Section 60 of the CLM Act 1997; and
- There were no records for current licenced activities at the site under the POEO Act 1997. Historical licenses were identified for waterways onsite for the application of herbicides.

4.3 <u>Historical Business Directory and Additional Lotsearch Information</u>

Historical business records for the site and surrounding areas in the report buffer were included in the Lotsearch report (attached in the appendices). The records indicated there were no motor garages, service stations or dry cleaners historically registered at the site.

In addition to the above, EIS have reviewed additional information contained within the Lotsearch report and note the following:

- There were no local or state heritage items at the site or in the immediate surrounds;
- There were no significant ecological constraints at the site or in the immediate surrounds; and
- The online National Assessment dataset indicates that the site is located within a high risk area
 of Dryland Salinity.

¹⁰ NSW Government Legislation, (1997). *Protection of the Environment Operations Act 1997*. (referred to as POEO Act 1997)

4.4 <u>Summary of Site History Information</u>

The historical information indicated that:

- The site appeared vacant and grassed and possibly used for military/defence land use from at least 1956 to 1991. The presence of man-made features including buildings, dams, mounds and tracks indicated ongoing activity across the site and immediate surrounds during this time;
- The buildings were demolished sometime prior to 2002 and the site left vacant until the development of the surrounding areas sometime prior to 2014; and
- The site remained largely unchanged from 2014 to the present day.

4.5 <u>Integrity of Site History Information</u>

The majority of the site history information was obtained from government organisations as outlined in the relevant sections of this report. The veracity of the information from these sources is considered to be relatively high. A certain degree of information loss can be expected given the lack of specific land use details over time. EIS has relied upon the Lotsearch report and has not independently verified any information contained within. However, it is noted that the Lotsearch report is generated based on databases maintained by various government agencies and is expected to be reliable.

5 CONCEPTUAL SITE MODEL

5.1 <u>Potential Contamination Sources/AEC and CoPC</u>

The potential contamination sources/AEC and CoPC are presented in the following table:

Table 5-1: Potential Contamination Sources/AEC and Contaminants of Potential Concern

Source / AEC	СоРС
Fill material – Portions of the site appear to have been historically filled for site features such as mounds and to fill disused dams. This fill was most likely used during the site levelling (the JK Geotechnics borehole logs identify fill to depths of over 2m). There is a potential for the fill to be contamination.	Heavy metals (arsenic, cadmium, chromium, copper, lead, mercury, nickel and zinc), petroleum hydrocarbons (referred to as total recoverable hydrocarbons – TRHs), benzene, toluene, ethylbenzene and xylene (BTEX), polycyclic aromatic hydrocarbons (PAHs), organochlorine pesticides (OCPs), organophosphate pesticides (OPPs), polychlorinated biphenyls (PCBs) and asbestos.
Fuel storage – The possible military/defence land use on site and immediate surrounds may have involved the storage of fuel or other petroleum products. Incorrect storage or leaking containers may have contaminated the underlying soil.	Lead, TRH, BTEX and PAHs
Use of pesticides – Pesticides may have been used beneath the former buildings and/or around the site. There is a low potential for pesticide/herbicide storage/spills etc (small quantities) associated with the 'Landscape Solutions' compound.	Heavy metals, OCPs, OPPs, herbicides
Hazardous Building Material – Hazardous building materials may be present as a result of former building and demolition activities. These materials have the potential to be mixed in with fill during earthworks.	Asbestos, lead and PCBs
Storage of explosives – The historical site photographs indicate the buildings in the surround areas may have been used for storage of explosive materials.	Explosive residues (e.g. TNT, RDX), VOCs

Unexploded ordnance is another risk factor that could potentially pose a risk to site users. The assessment and management and unexploded ordnance is a specialised field and this has been considered further in drawing conclusions for the site.

5.2 Mechanism for Contamination, Affected Media, Receptors and Exposure Pathways

The mechanisms for contamination, affected media, receptors and exposure pathways relevant to the potential contamination sources/AEC are outlined in the following CSM table:

Tal	h	_		η.	CS	ΝЛ
Ιd	U	ıe	Э-	٠۷.	C)	ΙVΙ

Table 5-2: CSM Potential mechanism for	The mechanisms for contamination are most likely to include 'top-down'
contamination	impacts and spills. There is a potential for sub-surface releases to have occurred if deep fill (or other buried material) is present, although this is considered to be the least likely mechanism for contamination.
Affected media	Soil/soil vapour and groundwater have been identified as potentially affected media.
Receptor identification	Human receptors include site occupants/users (adults and children), construction workers and intrusive maintenance workers. Off-site human receptors include adjacent land users (including children within the adjacent childcare centre).
	Ecological receptors include terrestrial organisms and plants within unpaved areas (including the proposed landscaped areas, sports fields, gardens etc), and freshwater ecology within the water body to the south of the site.
Potential Exposure pathways	Potential exposure pathways relevant to the human receptors include ingestion, dermal absorption and inhalation of dust (all contaminants) and vapours (volatile TRH, naphthalene and BTEX). The potential for exposure would typically be associated with the construction and excavation works, and use of unpaved areas (i.e. the gardens) and future buildings (i.e. vapour inhalation).
	Potential exposure pathways for ecological receptors include primary contact and ingestion. This could occur via off-site migration of contaminated sediment via overland flow and stormwater run-off, or via migration of groundwater.
Presence of preferential pathways for contaminant movement	Preferential pathways for contaminant migration were not identified.

5.3 Assessment of Data Gaps

EIS has undertaken a preliminary data gap analysis based on the findings of the assessment. The data gaps and our comments are outlined in the following table:

Table 5-3: Data Gap Assessment

Data Gap	EIS Comments
Limited site history sources	Council records, historical land titles records and SafeWork NSW records (for the storage of dangerous goods) were not reviewed for the assessment. These records may provide additional information, however the information is unlikely to alter the CSM. EIS are of the opinion that a detailed review of historical site assessment reports, including any previous contamination investigations, remediation and validation works, would be more beneficial.
Soil and Groundwater Sampling	Soil and groundwater sampling and analysis was outside the scope of this assessment.

The comments above have been considered in drawing the conclusions provided in Section 6 of this report.

6 CONCLUSIONS

6.1 Contamination Sources/AEC and Potential for Site Contamination

Based on the scope of work undertaken for this assessment, EIS identified the following potential contamination sources/AEC:

- Fill (either imported, or locally sourced);
- Fuel storage;
- Use/storage of pesticides;
- Hazardous building materials; and
- Unexploded ordnance.

Considering the above, and based on a qualitative assessment of various lines of evidence as discussed throughout this report, EIS are of the opinion that there is a low to moderate potential for site contamination.

6.2 Conclusions and Recommendations

The site appeared to have been used for defence purposes which is listed in Table 1 of the SEPP55 Planning Guidelines as an activity that may cause contamination. On this basis, and considering the sensitivity of the proposed land use (i.e. a primary school), a Stage 2 investigation would typically be required. However, given the recent subdivision works and the information provided by Lendlease, the site may have already been investigated and remediated.

EIS are of the opinion that the historical land uses and potential sources of contamination identified would not preclude the proposed development. The following is recommended to better assess the risks:

- All historical reports relevant to site contamination assessment and remediation should be obtained and reviewed. Following the review, an assessment should be made as to whether further investigation is warranted (or required in order to obtain development consent); and
- A preliminary site investigation should be designed and implemented (if required) based on the outcome of the review.

Considering the findings of the assessment, EIS are of the opinion that the site can be made suitable for the proposed development subject to the appropriate implementation of the recommendations.

EIS consider that the assessment objectives outlined in Section 1.2 have been addressed.

7 LIMITATIONS

The following limitation apply to this assessment:

- EIS accepts no responsibility for any unidentified contamination issues at the site. Any
 unexpected problems/subsurface features that may be encountered during development works
 should be inspected by an environmental consultant as soon as possible;
- Previous use of this site may have involved excavation for the foundations of buildings, services, and similar facilities. In addition, unrecorded excavation and burial of material may have occurred on the site. Backfilling of excavations could have been undertaken with potentially contaminated material that may be discovered in discrete, isolated locations across the site during construction work;
- This report has been prepared based on site conditions which existed at the time of the assessment; scope of work and limitation outlined in the EIS proposal; and terms of contract between EIS and the client (as applicable);
- The conclusions presented in this report are based on investigation of conditions at specific locations, chosen to be as representative as possible under the given circumstances, visual observations of the site and immediate surrounds and documents reviewed as described in the report;
- The preparation of this report have been undertaken in accordance with accepted practice for environmental consultants, with reference to applicable environmental regulatory authority and industry standards, guidelines and the assessment criteria outlined in the report;
- Where information has been provided by third parties, EIS has not undertaken any verification process, except where specifically stated in the report;
- EIS has not undertaken any assessment of off-site areas that may be potential contamination sources or may have been impacted by site contamination, except where specifically stated in the report;
- EIS accept no responsibility for potentially asbestos containing materials that may exist at the site. These materials may be associated with demolition of pre-1990 constructed buildings or fill material at the site;
- EIS have not and will not make any determination regarding finances associated with the site;
- Additional investigation work may be required in the event of changes to the proposed development or landuse. EIS should be contacted immediately in such circumstances;
- Material considered to be suitable from a geotechnical point of view may be unsatisfactory from a soil contamination viewpoint, and vice versa; and
- This report has been prepared for the particular project described and no responsibility is accepted for the use of any part of this report in any other context or for any other purpose.

IMPORTANT INFORMATION ABOUT THIS REPORT

These notes have been prepared by EIS to assist with the assessment and interpretation of this report.

The Report is based on a Unique Set of Project Specific Factors:

This report has been prepared in response to specific project requirements as stated in the EIS proposal document which may have been limited by instructions from the client. This report should be reviewed, and if necessary, revised if any of the following occur:

- The proposed land use is altered;
- The defined subject site is increased or sub-divided;
- The proposed development details including size, configuration, location, orientation of the structures or landscaped areas are modified;
- The proposed development levels are altered, eg addition of basement levels; or
- Ownership of the site changes.

EIS/J&K will not accept any responsibility whatsoever for situations where one or more of the above factors have changed since completion of the assessment. If the subject site is sold, ownership of the assessment report should be transferred by EIS to the new site owners who will be informed of the conditions and limitations under which the assessment was undertaken. No person should apply an assessment for any purpose other than that originally intended without first conferring with the consultant.

Changes in Subsurface Conditions:

Subsurface conditions are influenced by natural geological and hydrogeological process and human activities. Groundwater conditions are likely to vary over time with changes in climatic conditions and human activities within the catchment (e.g. water extraction for irrigation or industrial uses, subsurface waste water disposal, construction related dewatering). Soil and groundwater contaminant concentrations may also vary over time through contaminant migration, natural attenuation of organic contaminants, ongoing contaminating activities and placement or removal of fill material. The conclusions of an assessment report may have been affected by the above factors if a significant period of time has elapsed prior to commencement of the proposed development.

This Report is based on Professional Interpretations of Factual Data:

Site assessments identify actual subsurface conditions at the actual sampling locations at the time of the investigation. Data obtained from the sampling and subsequent laboratory analyses, available site history information and published regional information is interpreted by geologists, engineers or environmental scientists and opinions are drawn about the overall subsurface conditions, the nature and extent of contamination, the likely impact on the proposed development and appropriate remediation measures.

Actual conditions may differ from those inferred, because no professional, no matter how qualified, and no subsurface exploration program, no matter how comprehensive, can reveal what is hidden by earth, rock and time. The actual interface between materials may be far more gradual or abrupt than an assessment indicates. Actual conditions in areas not sampled may differ from predictions. Nothing can be done to prevent the unanticipated, but steps can be taken to help minimise the impact. For this reason, site owners should retain the services of their consultants throughout the development stage of the project, to identify variances, conduct additional tests which may be needed, and to recommend solutions to problems encountered on site.

Assessment Limitations:

Although information provided by a site assessment can reduce exposure to the risk of the presence of contamination, no environmental site assessment can eliminate the risk. Even a rigorous professional assessment may not detect all contamination on a site. Contaminants may be present in areas that were not surveyed or sampled, or may migrate to areas which showed no signs of contamination when sampled.

EIS Ref: E30718KPrpt-rev1

Contaminant analysis cannot possibly cover every type of contaminant which may occur; only the most likely contaminants are screened.

Misinterpretation of Site Assessments by Design Professionals:

Costly problems can occur when other design professionals develop plans based on misinterpretation of an assessment report. To minimise problems associated with misinterpretations, the environmental consultant should be retained to work with appropriate professionals to explain relevant findings and to review the adequacy of plans and specifications relevant to contamination issues.

Logs Should not be Separated from the Assessment Report:

Borehole and test pit logs are prepared by environmental scientists, engineers or geologists based upon interpretation of field conditions and laboratory evaluation of field samples. Logs are normally provided in our reports and these should not be re-drawn for inclusion in site remediation or other design drawings, as subtle but significant drafting errors or omissions may occur in the transfer process. Photographic reproduction can eliminate this problem, however contractors can still misinterpret the logs during bid preparation if separated from the text of the assessment. If this occurs, delays, disputes and unanticipated costs may result. In all cases it is necessary to refer to the rest of the report to obtain a proper understanding of the assessment. Please note that logs with the 'Environmental Log' header are not suitable for geotechnical purposes as they have not been peer reviewed by a Senior Geotechnical Engineer.

To reduce the likelihood of borehole and test pit log misinterpretation, the complete assessment should be available to persons or organisations involved in the project, such as contractors, for their use. Denial of such access and disclaiming responsibility for the accuracy of subsurface information does not insulate an owner from the attendant liability. It is critical that the site owner provides all available site information to persons and organisations such as contractors.

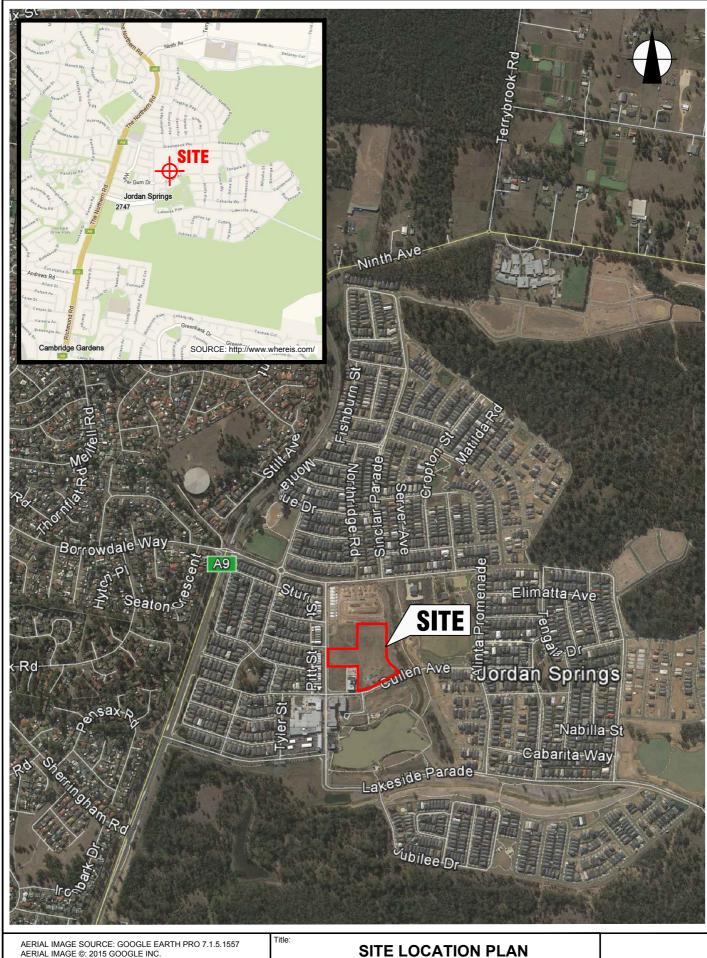

Read Responsibility Clauses Closely:

Because an environmental site assessment is based extensively on judgement and opinion, it is necessarily less exact than other disciplines. This situation has resulted in wholly unwarranted claims being lodged against consultants. To help prevent this problem, model clauses have been developed for use in written transmittals. These are definitive clauses designed to indicate consultant responsibility. Their use helps all parties involved recognise individual responsibilities and formulate appropriate action. Some of these definitive clauses are likely to appear in the environmental site assessment, and you are encouraged to read them closely. Your consultant will be pleased to give full and frank answers to any questions.

Report Date: 22 Jul 2017 19:37:12

Disclaimer:

The purpose of this report is to provide an overview of some of the site history, environmental risk and planning information available, affecting an individual address or geographical area in which the property is located. It is not a substitute for an on-site inspection or review of other available reports and records. It is not intended to be, and should not be taken to be, a rating or assessment of the desirability or market value of the property or its features. You should obtain independent advice before you make any decision based on the information within the report. The detailed terms applicable to use of this report are set out at the end of this report.

Location Confidences

Where Lotsearch has had to georeference features from supplied addresses, a location confidence has been assigned to the data record. This indicates a confidence to the positional accuracy of the feature. Where applicable, a code is given under the field heading "LC" or "LocConf". These codes lookup to the following location confidences:

LC Code	Location Confidence
1	Georeferenced to the site location / premise or part of site
2	Georeferenced with the confidence of the general/approximate area
3	Georeferenced to the road or rail
4	Georeferenced to the road intersection
5	Feature is a buffered point
6	Land adjacent to Georeferenced Site
7	Georeferenced to a network of features

Dataset Listing

List of NSW contaminated sites notified to EPA

Records from the NSW EPA Contaminated Land list within the dataset buffer:

Map Id	Site	Address	Suburb	Activity	Management Class	Status	Location Confidence	Dist (m)	Direction
N/A	No records in buffer								

The values within the EPA site management class in the table above, are given more detailed explanations in the table below:

EPA site management class	Explanation
Contamination being managed via the planning process (EP&A Act)	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. The contamination of this site is managed by the consent authority under the Environmental Planning and Assessment Act 1979 (EP&A Act) planning approval process, with EPA involvement as necessary to ensure significant contamination is adequately addressed. The consent authority is typically a local council or the Department of Planning and Environment.
Contamination currently regulated under CLM Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). Management of the contamination is regulated by the EPA under the CLM Act. Regulatory notices are available on the EPA's Contaminated Land Public Record of Notices.
Contamination currently regulated under POEO Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. Management of the contamination is regulated under the Protection of the Environment Operations Act 1997 (POEO Act). The EPA's regulatory actions under the POEO Act are available on the POEO public register.
Contamination formerly regulated under the CLM Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). The contamination was addressed under the CLM Act.
Contamination formerly regulated under the POEO Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed under the Protection of the Environment Operations Act 1997 (POEO Act).
Contamination was addressed via the planning process (EP&A Act)	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed by the appropriate consent authority via the planning process under the Environmental Planning and Assessment Act 1979 (EP&A Act).
Ongoing maintenance required to manage residual contamination (CLM Act)	The EPA has determined that ongoing maintenance, under the Contaminated Land Management Act 1997 (CLM Act), is required to manage the residual contamination. Regulatory notices under the CLM Act are available on the EPA's Contaminated Land Public Record of Notices.
Regulation being finalised	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997. A regulatory approach is being finalised.
Regulation under the CLM Act not required	The EPA has completed an assessment of the contamination and decided that regulation under the Contaminated Land Management Act 1997 is not required.
Under assessment	The contamination is being assessed by the EPA to determine whether regulation is required. The EPA may require further information to complete the assessment. For example, the completion of management actions regulated under the planning process or Protection of the Environment Operations Act 1997. Alternatively, the EPA may require information via a notice issued under s77 of the Contaminated Land Management Act 1997 or issue a Preliminary Investigation Order.

Flora	Thymelaeaceae	Pimelea spicata	Spiked Rice-flower	No	Endangered, Protected	Endangered

Data does not include records not defined as either endangered or vulnerable, and category 1 sensitive species are also excluded. NSW Office of Environment and Heritage's Atlas of NSW Wildlife, which holds data from a number of custodians. Data obtained 22/07/2017

USE OF REPORT - APPLICABLE TERMS

The following terms apply to any person (End User) who is given the Report by the person who purchased the Report from Lotsearch Pty Ltd (ABN: 89 600 168 018) (Lotsearch) or who otherwise has access to the Report. The contract terms that apply between Lotsearch and the purchaser of the Report are specified in the order form pursuant to which the Report was ordered and the terms set out below are of no effect as between Lotsearch and the purchaser of the Report.

- End User acknowledges and agrees that:
 - (a) the Report is compiled from or using content (Third Party Content) which is comprised of:
 - (i) content provided to Lotsearch by third party content suppliers with whom Lotsearch has contractual arrangements or content which is freely available (Third Party Content Suppliers):
 - (i) content which is derived from content described in paragraph (i);
 - (b) Lotsearch does not take any responsibility for or give any warranty in relation to the accuracy or completeness of any Third Party Content included in the Report;
 - (c) the Third Party Content Suppliers do not constitute an exhaustive set of all repositories or sources of information available in relation to the property which is the subject of the Report (**Property**);
 - (d) Lotsearch has not undertaken any physical inspection of the property;
 - (e) Lotsearch does not warrant that all land uses or features whether past or current are identified in the Report;
 - (f) the Report does not include any information relating to the actual state or condition of the Property;
 - (g) the Report should not be used or taken to indicate or exclude actual fitness or unfitness of a Property for any particular purpose;
 - (h) the Report should not be relied upon for determining saleability or value or making any other decisions in relation to the Property and in particular should not be taken to be a rating or assessment of the desirability or market value of the property or its features; and
 - (i) the End User should undertake its own inspection s of the Property to satisfy itself that there are no defects or failures.
- 2. The End User may not make the Report or any copies or extracts of the report or any part of it available to any other person. If End User wishes to provide the Report to any other person or make extracts or copies of the Report, it must contact the purchaser of the Report before doing so to ensure the proposed use is consistent with the contract terms between Lotsearch and the purchaser.
- 3. Neither Lotsearch (nor any of its officers, employees or agents) nor any of its Third Party Content Suppliers will have any liability to End User or any person to whom End User provides the Report and End User must not represent that Lotsearch or any of its Third Party Content Suppliers accepts liability to any such person or make any other representation to any such person on behalf of Lotsearch or any Third Party Content Supplier.
- 4. End User must not remove any copyright notices, trade marks, digital rights management information, other embedded information, disclaimers or limitations from the Report or authorise any person to do so.
- 5. End User acknowledges and agrees that Lotsearch and Third Party Content Suppliers retain ownership of all copyright, patent, design right (registered or unregistered), trade marks (registered or unregistered), database right or other data right, moral right or know how or any other intellectual property right in any Report or any other item, information or data included in or provided as part of a Report.
- 6. To the extent permitted by law and subject to paragraph 7, all implied terms, representations and warranties whether statutory or otherwise relating to the subject matter of these terms other than as expressly set out in these terms are excluded.
- 7. Subject to paragraph 8, Lotsearch excludes liability to End User for loss or damage of any kind, however caused, due to Lotsearch's negligence, breach of contract, breach of any law, in equity, under indemnities or otherwise, arising out of all acts, omissions and events whenever occurring.
- 8. Lotsearch acknowledges that if, under applicable State, Territory or Commonwealth law, End User is a consumer certain rights may be conferred on End User which cannot be excluded, restricted or modified. If so, and if that law applies to Lotsearch, then, Lotsearch's liability is limited to the greater of an amount equal to the cost of resupplying the Report and the maximum extent permitted under applicable laws.
- 9. Subject to paragraph 7, neither Lotsearch nor the End User is liable to the other for any indirect, incidental, consequential, special or exemplary damages arising out of or in relation to these terms.
- 10. These terms are subject to New South Wales law.

PROPOSAL

31/08/2016

EIS Ref: EP43202KP2

Hayball

Attention: David Tordoff

Email: dtordoff@hayball.com.au

PRELIMINARY ENVIRONMENTAL SITE ASSESSMENT
PROPOSED DEVELOPMENT
WESTERN SYDNEY AND WOLLONGONG SCHOOLS

1 Introduction

EIS are pleased to provide this revised proposal based on the information provided by Hayball. This proposal includes a two-stage scope comprising:

- Stage 1a: Preliminary contamination screening (desktop and site inspection); and
- **Stage 1b**: Preliminary soil contamination assessment and supplementary site history assessment. The requirement to proceed with Stage 1b will be assessed following completion of Stage 1a.

The primary aim of the screening/assessment is to assess the potential for site contamination via the identification of potential contamination sources and contaminants of concern. It should be noted that the costs associated with Stage 1b have been excluded at this stage and will be confirmed following Stage 1a in the event these works are required.

The cost of this proposal is additional to the JK Geotechnics¹ proposal (Ref: P3202Z) dated 24 August 2016 and we have assumed that, if required, the Stage 1b works will be undertaken concurrently with the geotechnical investigation

2 Proposed Development

Based on the details provided, EIS understand that development works are proposed for 12 schools, including:

- Mainsbridge SSP school to be relocated;
- Jordan Springs PS new build (site yet to be determined);

¹ JK Geotechnics is a division of Jeffery and Katauskas Group

Postal Address: PO Box 976, North Ryde BC NSW 1670
Tel: 02 9888 5000 • Fax: 9888 5004
EIS is a division of Jeffery and Katauskas Pty Ltd • ABN 17 003 550 801

- Riverstone HS expansion and upgrade;
- Alex Avenue PS new build (site yet to be determined);
- Liverpool West PS expansion and upgrade;
- Cecil Hills PS expansion and upgrade;
- Prestons expansion and upgrade;
- Quakers Hill East PS expansion and upgrade;
- Wollongong PS expansion and upgrade;
- Gwynneville PS expansion and upgrade;
- Marsden Road PS expansion and upgrade; and
- Canley Vale HS expansion and upgrade.

3 Scope of Work

The general framework of the proposed screening/assessment has been designed with reference to the guidelines adopted by the NSW EPA for the assessment of contaminated sites (see http://www.epa.nsw.gov.au/clm/).

3.1 Stage 1a

The Stage 1a scope of work for each of the 12 school sites is outlined below:

- Purchase and review of a Lotsearch Pty Ltd Environmental Risk and Planning Report for the site.
 The following information from the Lotsearch report will be evaluated during the environmental assessment process:
 - Regional geology and soil landscape, including acid sulfate soil risk;
 - Registered groundwater bores;
 - Historical aerial photographs; and
 - o Contaminated land records maintained by the NSW EPA.
- The Lotsearch report will also be used to obtain information in relation to historical business
 activities at the site and in the immediate surrounds, salinity, heritage items, ecological
 constraints and other planning-related issues that are relevant to the development of a
 conceptual site model;
- Walkover inspection of the site and visual inspection of the immediate surrounds; and
- Preparation of a report presenting the results of the screening, along with a discussion and recommendations (if required).

3.2 Stage 1b

The Stage 1b scope of work is outlined below. The requirement to implement these works will be evaluated as part of the Stage 1 a screening.

- Supplementary site history assessment. The scope of the supplementary assessment will be dependent on the outcome of Stage 1b, but may include: review of Safe Work records for storage of dangerous goods; review of historical land titles; review of council records;
- Soil sampling from 2-4 of the geotechnical boreholes. This sampling density will not meet the minimum density recommended in the NSW EPA Sampling Design Guidelines (1995). However,

the sampling is considered reasonable to confirm whether the site has been filled with imported material and to establish the potential for widespread soil contamination;

- Environmental samples will be obtained from the fill material (assumed to be no deeper than 0.5m) and from the upper 0.5-1m profile of natural material, based on field observations;
- The boreholes will be drilled using hand tools as outlined in the geotechnical proposal. The use of hand tools may limit the depth of the boreholes;
- All samples will be screened for volatile organic compounds (VOCs) using a hand held photoionisation detector (PID);
- Selected fill/natural soil samples will be analysed for combinations of the following contaminants: heavy metals (arsenic, cadmium, chromium, copper, lead, mercury, nickel and zinc); polycyclic aromatic hydrocarbons (PAHs); total recoverable hydrocarbons (TRH); monocyclic aromatic hydrocarbons (BTEX); organochlorine (OC) and organophosphate (OP) pesticides; polychlorinated biphenyls (PCBs); and asbestos;
- Analysis of field Quality Assurance/Quality Control (QA/QC) samples; and
- Preparation of a report presenting the results of the assessment. The report will include an evaluation of the results against the Tier 1 criteria outlined in the NEPM (2013).

3.3 Reporting

The reports will be issued as final version in electronic format (pdf copy) by email. The reports will be prepared with reference to the NSW OEH *Guidelines for Consultants Reporting on Contaminated Sites* (2011) and will include a conceptual site model.

4 Costs

The total cost for the Stage 1a work is

The costs associated with Stage 1b would be confirmed in the event these works are required.

The scope of work and costs may be subject to variation based on site conditions or additional information made available during the assessment. In the event that additional costs are likely to be incurred, EIS will seek approval from the client prior to proceeding with the variation.

5 Reporting Timeframe

The Stage 1a screening reports can be completed within two weeks of receiving confirmation of the development site area applicable to each school project.

The Stage 2b assessment reports can be completed three weeks after soil sampling (i.e. after each geotechnical investigation).

Review of client generated consultancy agreements or terms of engagement may delay the commencement of the investigation.

6 Proposal Acceptance

This proposal is valid for three months from the date of issue. The conditions of engagement are attached below. By accepting this proposal, the client agrees to the scope of work provided and acknowledges that they assume responsibility for any services outside the nominated scope of work.

In the event that additional services are required, the additional scope of services should be confirmed in writing via the preparation (and client acceptance) of a separate fee proposal or variation.

7 <u>Assumptions and Limitations</u>

7.1 Design and Development Stages

Due to the limited development details available and the lack of specific deliverables for the contamination assessment, we have assumed that the contamination screening/assessment is required for the initial concept design/planning stage. Additional works (outside of the Stage 1a and Stage 1b scope) would be site specific and would need to be priced separately at a later stage. We would suggest that the Head Design Consultant include suitable limitations in their submission as the scope and costs associated with additional investigation work, remediation and/or validation are unknown.

7.2 Presence of Contamination

The site assessment/investigation process usually requires a staged approach. If actual or potential contamination is encountered, additional work (outside the scope of this proposal) may be necessary in order to characterise the nature and extent of the problem. Potential triggers for additional work may include but are not limited to the following:

- The presence of asbestos in or on soil;
- Deep fill material;
- Limited or no access for sampling beneath buildings;
- Point sources of contamination such as underground fuel tanks;
- Potential ground gas or soil vapour issues; and
- Groundwater contamination.

7.3 Changes to Proposed Development Details and/or Site Information

The scope of work is based on the site/development details provided to EIS at the time of the preparation of this proposal. If this information changes, we may need to amend the scope which may incur additional costs.

All relevant plans and information in your possession regarding storage of dangerous goods, details of underground services, previous investigation reports and anecdotal site history should be made available to us prior to commission. Review of any such documents issued to EIS upon commission will be charged at unit rates.

7.4 Field Work / Inspections

- We have assumed that the Stage 1a site inspections for the Wollongong and Gwynneville schools
 can be undertaken on the same day. Additional costs will apply (based on the rates provided) in
 the event that the schools need to be inspected on different days;
- All work would be completed during normal working hours (0700 to 1700 hours, Monday to Friday) unless stated in the scope of works;
- Soil sampling for Stage 1b works would be undertaken from the boreholes drilled for the JK geotechnical investigation. Reference should be made to the JK proposal for details regarding this work;
- Standing time waiting for site access or instructions would be charged at unit rates; and
- Cancellation of any work may incur charges. Charges would directly relate to costs incurred or time spent on the project to the point of the cancellation.

8 Additional Work

Any additional work undertaken outside the scope will be charged at our normal schedule of rates plus 10% GST. Please contact us if you require any of the following additional items and a revised proposal will be issued for your consideration:

- Detailed Environmental Site Assessment in accordance with SEPP55²;
- Detailed screening of asbestos in soil in accordance with the Western Australia (WA) Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites (2009);
- Waste Classification for the off-site disposal of soil;
- Groundwater sampling and analysis for contamination screening or dewatering advice;
- Review of Client Generated Consultancy Agreements or Terms of Engagement;
- Changes to reports issued as final versions;
- Additional sampling and analysis outside the scope;
- Meetings or additional site visits outside the scope;
- NSW EPA/Council/auditor liaison;
- Review of reports prepared by other consultants; and
- Preparation and issue of report hard copies.

9 About EIS

EIS is a division of Jeffery and Katauskas Group (JK). JK Group is a well-established environmental and geotechnical consulting engineering company. EIS has undertaken over 10,000 site assessments in the past 20 years. The firm has a skilled workforce of over sixty personnel in the Sydney office. The company owns and operates eight drill rigs and specialises in combined environmental, geotechnical and groundwater investigations. EIS is an active member of the Australian Contaminated Land Consultants Association (ACLCA³). We offer practical solutions to environmental problems at very competitive rates.

² State Environmental Planning Policy No. 55 – Remediation of Land 1998, (SEPP55)

Summary of Proposal or Quotation Conditions and Conditions of Engagement Acceptance of Proposal Form

SUMMARY OF PROPOSAL OR QUOTATION CONDITIONS & CONDITIONS OF ENGAGEMENT

EIS is a Division of Jeffery and Katauskas Pty Ltd (A.C.N. 003 550 801 A.B.N. 17 003 550 801)

- 1 This document forms the entire agreement between the Client and Environmental Investigation Services (EIS).
- We require that you promptly forward a copy of these conditions to your Client if you are acting as an agent in this project.
- We request we be formally commissioned by return of the form below or Company Purchase Order. If we proceed on the basis of verbal commission, we will confirm your instructions by email, in which case the instructor will be deemed to have formally accepted these conditions. We request we be formally advised who should be invoiced for the works (ie. the Client) including business name, ACN/ABN and address, the relevant contact name and telephone number. Our QA System does not permit results or reports to be issued without an order, letter or email of commission.
- 4 Subject to the Privacy Act 1988, the Client gives consent to collection of information in relation to the Client and/or Client representative or advisors regarding names, addresses, and contact details. Such information is used for project communications and may be stored in the EIS database for future retrieval of project information. Such information may be made available to third parties for the purposes of debt collection or credit referencing including notifying other credit providers by listing on national databases of a default by you.
- 5 Neither the Client nor EIS shall disclose to third parties or use for any purpose (other than providing or benefiting from the Services) any information provided by the other unless:
 - a) required by law;
 - b) the information is already generally known to the public; or
 - c) the other consents to the disclosure.
- 6 If there are limiting time criteria, then please advise this information to us.
- 7 In providing the services, EIS shall exercise the degree of skill, care and diligence normally exercised by consulting engineers in similar circumstances. The services will not comply with AS1726 unless additional fees are paid for the extended brief.
- 8 EIS (or its employees or agents) do not accept or undertake the role or responsibility of the Principal Contractor with respect to the Work Health & Safety Act (NSW) 2011 or the Work Health & Safety Regulation 2011, whether explicitly or by default or implication. Unless advised otherwise, the Client will be the Principal Contractor.
- 9 Where a Head Contract is in place between the recipient of this fee proposal (Lead Consultant or Contractor) and their Client, EIS will be subcontracted to the Lead Consultant or Contractor for the works. EIS will endeavour to carry out the works in such a way as to enable the Lead Consultant or Contractor to meet their obligations under their Head Contract with their Client but EIS will not be bound to that Head Contract. Our engagement will be entirely between EIS and the Lead Consultant or Contractor on the basis of the scope of works and Summary Conditions of Engagement set out in this fee proposal.
- 10 Security of Payment:
 - a) For the purposes of this clause, the term 'Customer' shall mean the company or individual person who has requested EIS to carry out the work described in the attached proposal.
 - b) The Customer agrees to a charge of EIS so as to secure the repayment of all or any money which may be owing to EIS on the Customers interest in any freehold or leasehold land which the Customer may presently own or subsequently acquires.

- 11 The Client shall pay to EIS:
 - a) the Fee and the Reimbursable Expenses as set out in the accompanying proposal together with such other amounts in respect of other services agreed to be provided;
 - b) reasonable adjustments to the Fee and the Reimbursable Expenses to reflect the additional costs, expenses, liabilities, losses or other amounts incurred or suffered by EIS in the performance of the Services and arising out of or in connection with any event or matter beyond EIS's control; and
 - to the extent that amounts payable under this Agreement are not expressed to be GST inclusive, an additional amount for the GST incurred by EIS in relation to the supply of the Services ('GST').
- 12 EIS may claim payment in accordance with the times set out in the accompanying letter or, if no time is set out, monthly in arrears. The Client must pay to EIS, without set-off or deduction:
 - a) the amount payable under this Agreement for the Services provided during the relevant period, within 10 business days of EIS's invoice; and
 - the GST payable under this Agreement for the Services provided during the relevant period, within 10 business days of receiving a valid tax invoice.
- 13 EIS terms of payment are: Payment in full to be made within 10 business days of our invoice data. If in default of payment by the due date, the Client will be liable to pay Bank Overdraft and Accountancy Fees of 2.5% per month (calculated on a daily basis) on any outstanding amount and will indemnify EIS and pay all costs and expenses of a solicitor on an own client basis if legal action is necessary, and/or fees from a debt recovery agency, which EIS may incur in recovering from the Client any overdue amount. The Client gives consent to completion of a credit check on that individual, company or other entity.
- 14 EIS liability to the Client in respect of the commission shall be limited to either three times EIS invoiced amount or \$25,000, whichever is the lesser. Liability shall be limited to loss arising out of or in connection with EIS services under this agreement to the extent that the same is due to EIS negligence. EIS liability shall be reduced proportionally to the extent that any acts or omissions of the Client or the Client's employees, subcontractors or agents contributed to such claim, employees, subcontractors or agents contributed to such claim, liability or loss. EIS liability may be extended by negotiation. As a guide, professional indemnity insurance may be extended to \$1,000,000 and will be charged for at 2.5% of the invoiced amount or \$300+GST, whichever is the greater. The requirement for additional cover must be indicated at the time of acceptance of our proposal, and the appropriate fee will be in addition to EIS estimate or quotation.

If, and to the extent that, any of this clause is void as a result of Section 68 of the *Trade Practices Act 1974* (Cth), then EIS's liability for a breach of a condition or warranty is limited to:

- (i) the supplying of the relevant Services again; or
- (ii) the payment of the cost of having the Services supplied again.
- 15 After the expiration of one (1) year from the date of invoice for any work or investigation, EIS shall be discharged from all liability in respect of the services provided

Jeffery & Katauskas Pty Ltd, trading as Environmental Investigation Services ABN 17 003 550 801

- 16 Copyright in all documents (such as drawings, reports and specifications) provided by EIS shall remain the property of EIS. Subject to payment of fees due, the Client alone shall have a licence to use the documents provided for the purpose of completing the project, but the Client shall not use, or make copies of, such documents in connection with any work not included in the project. If the Client is in breach of any obligation to make a payment to EIS, EIS may revoke the licence to use the documents and the Client shall then cause to be returned to EIS all documents provided by EIS and all copies thereof.
- 17 EIS is not responsible for the Client for the project design or the methods, techniques, sequences, procedures and use of equipment which are employed by the contractor or others in executing the project.
- 18 Any dispute or difference ('Dispute') between the Client and the EIS may be notified by a party to that other party and the parties shall:
 - a) firstly, meet to negotiate, in good faith, resolution of the Dispute; and
 - secondly, if negotiation fails to achieve a resolution of the Dispute within five working days of the notification of the Dispute, attend mediation, administered in accordance with procedures as set out by the *Institute of Arbitration and Mediations Australia*.
- 19 The Client may, without prejudice to any other rights or remedies it may have, by written notice served on EIS terminate its obligations under this Agreement:
 - if EIS is in breach of the terms of the Agreement and the breach has not been remedied within 28 days of a written notice served by the Client on EIS specifying the breach and requiring the breach to be remedied; or
 - b) upon the Client giving EIS 60 days written notice of the intention to do so; or
 - if EIS informs the Client that it is insolvent, becomes bankrupt, or becomes subject to any official management, receivership, liquidation, provisional liquidation, voluntary administration, winding up or external administration ('Insolvency Event').
- 20 EIS may, without prejudice to any other rights or remedies it may have, by notice in writing served on the Client suspend its obligations under this Agreement:
 - immediately by written notice if the Client has failed to pay in accordance with this Agreement; or
 - b) if the Client is in breach of any of the other terms of the Agreement and the breach has not been remedied within 10 working days (or longer as EIS may allow) of a written notice served by EIS on the Client specifying the breach and requiring the breach to be remedied.

Neither party may assign, transfer or subject any obligations under this Agreement without the written consent of the other. Unless stated in writing to the contrary, no assignment, transfer or subletting shall release the assignor from any obligation under this Agreement.

In the interpretation of this Agreement, no rule of construction applies to the disadvantage of one party on the basis that it put forward this Agreement or any part of it.

- 21 Drawings showing all buried services should be forwarded to EIS so that boreholes and test pits, etc avoid any such services. EIS will observe for surface indications of buried services and locate boreholes away from them, however, EIS accepts no responsibility for damaging buried services if their locations have not been accurately advised.
- 22 EIS provides Consulting Environmental Engineering activities as a division of Jeffery and Katauskas Pty Ltd. Commissioning EIS to undertake environmental consulting engineering activities does not imply that EIS will provide geotechnical engineering advice. Should you require geotechnical input in parallel with the EIS site activities, JK Geotechnics should be contracted separately for this service. EIS personnel are not geotechnical engineers and therefore cannot under any circumstances be held responsible for geotechnical performance of works undertaken on site by a contractor or subcontractor. EIS will not bear any liability whatsoever for damage caused by the contractor or subcontractor to existing structures either on, or adjacent to, the work site. EIS environmental logs are prepared by environmental scientists for environmental purposes and are not suitable for geotechnical engineering design.

- 23 No environmental site assessment can eliminate the risk that contaminants may be present in areas that were not surveyed or sampled, or may migrate to areas which showed no signs of contamination when sampled. Contaminant analysis cannot possibly cover every type of contaminant which may occur, only the most likely contaminants are screened. EIS does not accept any liability whatsoever for any contaminants that are not detected during the work undertaken by EIS at any particular site or migration occurring from a nearby site.
- 24 EIS assumes that free and uninterrupted access to the site is available and trafficable for a heavy two wheel drive truck-mounted rig, unless noted otherwise in our proposal. All costs associated with recovery of bogged vehicles or damage to vehicle and/or equipment due to site conditions will be chargeable to the Client at schedule rates or cost plus 10% as appropriate. If a key to any gate is required, then it must be supplied to this office prior to the commencement of the investigation, otherwise standing time will be claimed for time lost in attempting to gain access. The Client shall be responsible for arranging legal access to a site prior to acceptance of this proposal. The work shall normally be within working hours (0700 hours to 1700 hours, Monday to Friday), unless noted otherwise in the proposal. Surcharges shall apply for work outside the above hours to cover penalty rates paid to staff. No allowance has been made for the following unless indicated otherwise; coring concrete or road pavements, reinstatement of disturbance to landscaped areas, site meetings, progress meetings, post-report consultations and paper copies of reports.
- Samples will be stored for a period of one month from date of report and will then be discarded unless otherwise requested in writing. If samples are found to contain hazardous levels of contamination, then additional charges for safe disposal may apply.
- 26 All costs associated with damaged, lost or excessively worn equipment due to drilling or CPT testing in fill will be charged for at cost plus 10% unless agreed otherwise.
- 27 EIS is not liable to the Client in respect of any indirect, consequential or special losses (including loss of profit, loss of business opportunity and payment of liquidated sums or damages under any other agreement.
- 28 It is essential that detailed information regarding any known or possible contamination at a site be forwarded to EIS prior to undertaken site work in order that EIS can ensure appropriate Health & Safety precautions are followed. Additional costs will be involved if protective clothing, respirators, etc are required. If suspicious conditions are encountered on site, EIS will attempt to contact you to advise of the situation. If there is any doubt as to safety of EIS personnel, EIS will use their judgment as to appropriate precautions and the additional cost will be added to the quoted price.
- 29 Information of any relevance in determining the history of the site, whether land title documents, plans, drawings, photographs or personal contacts should be provided to EIS and may be quoted in their report where appropriate. EIS holds no liability whatsoever for any inaccuracy in their report which is due to information being withheld which may invalidate their conclusions.
- 30 If any other party is to be advised regarding EIS presence on site, the names, addresses and telephone numbers of such parties should be advised or, alternatively, confirmation given that the relevant parties have been notified and approve.
- 31 Where drilling time is lost due to the presence of significant asbestos containing material (ACM), additional costs will be charged to cover the lost time, special disposal of ACM to licensed landfill, and the costs associated with appointment of WHS Hygienist, if required. Work will be undertaken in accordance with NSW SafeWork requirements.
- 32 The accompanying proposal only remains valid for 90 days from the date of issue. After 90 days, we reserve the right to revise our fee.
